

ENGLISH FOR WORK / SEPTEMBER 2026

# Medical Devices English

## Teacher's guide

Teach practical workplace communication with specific cases, clear language targets, and a repeatable feedback process.

### PRACTICE THAT TRANSFERS TO WORK

Read a realistic case. Find the right language. Speak, write, get feedback, and try again.

Eight lessons | Intermediate to advanced | Independent or classroom study

For medical device engineers, product managers, quality and regulatory staff, clinical specialists, manufacturing teams, field-service teams, and device-company leaders.

Fictional language practice for professional communication. Clinical, safety, regulatory, and patient-care decisions follow qualified supervision and current local procedures.

All scenarios, figures, and model responses are fictional teaching material. Use invented details in practice.

# Your course at a glance

Use the lesson numbers to match this document with the website and the other guides.

## 01 User Needs and Design Inputs

Clarify missing information before responding.

## 02 Risk Management and Hazard Analysis

Explain a useful distinction in plain English.

## 03 Verification, Validation, and Design Review

Compare options using the same criteria and state the tradeoff.

## 04 Usability and Human Factors

Separate observations, assumptions, and conclusions.

## 05 Regulatory Pathways and Submissions

Make a request with a clear action, purpose, and realistic timing.

## 06 Complaints, MDRs, and Postmarket Signals

Give a handoff that the receiving person can confirm.

## 07 Manufacturing, Suppliers, and Nonconformance

Distinguish completed work from pending work and explain its impact.

## 08 Clinical Training and Labeling Boundaries

State a concern respectfully and propose a practical route forward.

## Choose your pace

Quick practice: spend 15 minutes reading one case and saying a response. Full lesson: allow 45-60 minutes for language work, conversation, writing, and revision.

## Level support

B1 learners can use the frames and a partner. B2 learners can try a response before reading the model. C1 learners can add the harder follow-up and reduce preparation time. These are teaching suggestions, not certified CEFR level ratings.

# A 60-minute lesson that works

Prepare the case and the learner pages. Keep the model response hidden until learners have attempted their own. Choose two field terms that are important to understanding the case.

## **0-5 minutes | Activate experience**

Ask learners to name a comparable situation without sharing confidential details. Introduce the communication goal.

## **5-12 minutes | Read and sort facts**

Read the case. Learners identify confirmed facts, unknowns, the audience, and the immediate communication need.

## **12-22 minutes | Notice and practice language**

Explain the workshop pattern. Work through the vocabulary and editing example, then discuss both language checks and the reasons behind the choices.

## **22-35 minutes | Speak and respond**

Give two minutes of preparation. Run the partner exchange, switch roles, and add the follow-up challenge. Observe whether the listener can act on the message.

## **35-47 minutes | Write for a real reader**

Learners write the short message using only case facts. Partners check clarity, certainty, and the requested next step.

## **47-55 minutes | Compare and revise**

Reveal the model. Discuss alternative acceptable wording. Give one meaning correction and one language correction, then repeat.

## **55-60 minutes | Retrieve and transfer**

Close the materials. Learners recall two expressions and identify one communication habit to use in another situation.

## **Adapt the session**

For 45 minutes, shorten the first conversation and assign writing for follow-up. For 90 minutes, add 15 minutes for a second case and 15 minutes for the final challenge. More time should produce more meaningful practice, not longer explanations.

**LESSON 01 / FACILITATOR NOTES**

# User Needs and Design Inputs

Clarify missing information before responding.

**CASE**

A design brief says the device should be "easy to use." It does not identify the intended users or use environment.

**Teach this move**

Name the exact word, fact, or requirement you need clarified. Ask one focused question at a time. Repeat your understanding and give the other person a chance to correct it.

Vocabulary to check: user need, design input, intended use, traceability.

**Model response**

Who will use it, for which task, and in what environment? Let's turn "easy to use" into specific user needs and requirements that the team can review.

**Listen for, then coach**

Ask learners to point to the case fact behind each important statement. Accept different wording when it preserves meaning, fits the listener, and does not invent an outcome. After an introductory phrase such as 'Could you explain', the embedded question uses statement word order: what this means.

**Second-round challenge**

The other person uses an ambiguous word such as 'ready', 'approved', or 'urgent'. Clarify it before continuing.

**Language-check answers**

1. C - Could you confirm when the review starts? The embedded question uses subject then verb: the review starts.
2. B - Has the report been approved, or is it ready for review? This question distinguishes two meanings of 'ready' that affect the next action.

## LESSON 02 / FACILITATOR NOTES

# Risk Management and Hazard Analysis

Explain a useful distinction in plain English.

**CASE**

A risk discussion uses hazard and harm interchangeably. The team needs to describe the potential source of harm and the possible outcome separately.

**Teach this move**

Start with the reader's question. Explain one unfamiliar term with familiar words, then give a relevant example or contrast. Check understanding without asking only 'Do you understand?'.

Vocabulary to check: hazard, harm, FMEA, residual risk.

**Model response**

Let's distinguish the hazard from the harm that could result. That will help us describe the sequence clearly and discuss the controls without treating the two terms as synonyms.

**Listen for, then coach**

Ask learners to point to the case fact behind each important statement. Accept different wording when it preserves meaning, fits the listener, and does not invent an outcome. The revised sentence names the action in familiar words. Specialist vocabulary is useful when it adds precision, but repeating abstract nouns can hide the meaning.

**Second-round challenge**

Your listener is new to this field. Replace two specialist expressions with clear explanations without changing the meaning.

**Language-check answers**

1. B - The backlog is the work still waiting to be completed. This gives the meaning in familiar words.
2. A - How would you describe the next step in your own words? An open request lets the listener show their understanding.

**LESSON 03 / FACILITATOR NOTES**

# Verification, Validation, and Design Review

Compare options using the same criteria and state the tradeoff.

**CASE**

A device team has checked design outputs against specifications but has not yet completed the planned evaluation of intended user needs.

**Teach this move**

Use the same time period, scope, and measurement basis for both options. Explain a difference with 'whereas' or 'while'. State what improves and what is given up; do not hide the weaker side of a recommendation.

Vocabulary to check: verification, validation, design review, acceptance criteria.

**Model response**

The specification checks address verification. They do not by themselves answer every validation question about intended use. I'll report those activities separately and identify what remains open.

**Listen for, then coach**

Ask learners to point to the case fact behind each important statement. Accept different wording when it preserves meaning, fits the listener, and does not invent an outcome. 'Better' already has comparative meaning, so it does not need 'more'. Naming the criterion and tradeoff makes the comparison useful.

**Second-round challenge**

Your listener focuses only on the lowest price or fastest date. Explain one other relevant comparison criterion.

**Language-check answers**

1. A - Option A is faster, whereas option B costs less. 'Whereas' marks a contrast between two options.
2. C - An increase of one percentage point. Subtracting 6% from 7% gives one percentage point. The relative increase is about 16.7%.

**LESSON 04 / FACILITATOR NOTES**

# Usability and Human Factors

Separate observations, assumptions, and conclusions.

**CASE**

Several participants misread a label in a formative usability study. A draft report describes them as careless.

## Teach this move

Say what the evidence shows, identify what is still unknown, and limit the conclusion to that evidence. Words such as 'may', 'suggests', and 'in this sample' are useful when the uncertainty is real. Do not soften an urgent, verified safety concern.

Vocabulary to check: human factors, use error, formative study, summative study.

## Model response

The observed difficulty was reading the label correctly in this study. Let's describe the task, design, and use conditions, then investigate contributing factors without assuming carelessness.

## Listen for, then coach

Ask learners to point to the case fact behind each important statement. Accept different wording when it preserves meaning, fits the listener, and does not invent an outcome. The revision states the finding and its scope. It avoids turning limited evidence into a universal claim.

## Second-round challenge

Someone asks for a yes-or-no answer when the evidence supports only a qualified answer. Be concise while preserving the uncertainty.

## Language-check answers

1. C - The change may have contributed to the delay. 'May have contributed' presents a possibility without claiming the cause is established.
2. B - In this pilot, the observed result was ... This locates the finding in the setting actually studied.

## LESSON 05 / FACILITATOR NOTES

# Regulatory Pathways and Submissions

Make a request with a clear action, purpose, and realistic timing.

**CASE**

A presentation refers to a proposed device pathway as settled, although the regulatory team is still evaluating options.

**Teach this move**

State the action and the information needed. Explain why it matters and specify a deadline only when one is given or agreed. 'Could you' is polite; repeated apologies can obscure a legitimate request. Urgent situations may require a direct request.

Vocabulary to check: 510(k), De Novo, PMA, predicate device.

**Model response**

Please label the pathway as under evaluation and identify the questions for the regulatory team. We should distinguish a proposed approach from a confirmed regulatory conclusion.

**Listen for, then coach**

Ask learners to point to the case fact behind each important statement. Accept different wording when it preserves meaning, fits the listener, and does not invent an outcome. The revision names the document and requested response. It avoids expressions that may be unfamiliar or ambiguous for an international audience.

**Second-round challenge**

The other person cannot meet the requested timing. Clarify an alternative without inventing authority to change a formal deadline.

**Language-check answers**

1. B - Send it no later than Thursday. 'By' sets the latest point, while 'after' refers to a later time.
2. A - Could you confirm the document version needed for the review? The requested action and information are explicit.

## LESSON 06 / FACILITATOR NOTES

# Complaints, MDRs, and Postmarket Signals

Give a handoff that the receiving person can confirm.

**CASE**

A complaint report describes a malfunction but lacks the device identifier and event date. The complaint-handling team needs the available facts promptly.

**Teach this move**

State the current situation, relevant background, open task, and receiving role. Ask for acknowledgment or repeat-back of the critical item. Sending a message and transferring responsibility are not always the same thing.

Vocabulary to check: complaint, MDR, malfunction, postmarket surveillance.

**Model response**

Here is the reported malfunction and the information currently available. The device identifier and event date are missing. Please confirm receipt and handle follow-up through the complaint process.

**Listen for, then coach**

Ask learners to point to the case fact behind each important statement. Accept different wording when it preserves meaning, fits the listener, and does not invent an outcome. The revised sentence asks for an identifiable receiving team instead of leaving responsibility with an unspecified 'someone'.

**Second-round challenge**

The intended recipient cannot take ownership. Keep the status clear and identify the need for an authorized reassignment.

**Language-check answers**

1. A - Please confirm who will complete the outstanding check. It asks for an identifiable person or team responsible for the task.
2. C - So the result is pending and your team will follow up; is that correct? This repeats the status and responsibility and invites correction.

## LESSON 07 / FACILITATOR NOTES

# Manufacturing, Suppliers, and Nonconformance

Distinguish completed work from pending work and explain its impact.

**CASE**

An incoming-material review has identified two nonconforming lots. The investigation is open and disposition has not been authorized.

**Teach this move**

Lead with the current state, then the important change or open item. Use completed-action language only for completed work. Add a next update point when it is known; do not invent a date to make the message sound complete.

Vocabulary to check: nonconformance, supplier CAPA, process validation, lot traceability.

**Model response**

Two lots have open nonconformance records. The investigation and disposition are still pending. I'll report their status without implying that release or rejection has already been approved.

**Listen for, then coach**

Ask learners to point to the case fact behind each important statement. Accept different wording when it preserves meaning, fits the listener, and does not invent an outcome. The revision gives observable progress. A positive label alone does not tell the reader what is complete or still needed.

**Second-round challenge**

The listener asks you to reduce the update to two sentences. Preserve the most important completed and pending items.

**Language-check answers**

1. C - The team has completed the review. 'Has completed' states that the action is finished.
2. B - Delivery is planned for Friday; the carrier has not confirmed it. This explicitly labels the date as planned and identifies the missing confirmation.

## LESSON 08 / FACILITATOR NOTES

# Clinical Training and Labeling Boundaries

State a concern respectfully and propose a practical route forward.

**CASE**

A trainer is asked to demonstrate a use beyond the materials approved for the session.

**Teach this move**

Acknowledge the goal without pretending agreement. Name the specific problem and its implication, then ask a focused question or propose a next step. Be direct when a safety or ethical boundary requires it.

Vocabulary to check: labeling, instructions for use, off-label, clinical evidence.

**Model response**

That request goes beyond the approved training material for this session. I can cover the authorized instructions and route the additional question to the appropriate team for review.

**Listen for, then coach**

Ask learners to point to the case fact behind each important statement. Accept different wording when it preserves meaning, fits the listener, and does not invent an outcome. The revised sentence identifies a testable concern about the proposal. It leaves room for a constructive response.

**Second-round challenge**

The other person repeats the request more firmly. Restate the specific concern calmly and explain the appropriate next route.

**Language-check answers**

1. B - The proposal assumes the review is complete; the record shows it is still open. It connects the concern to a specific assumption and record.
2. A - Could we resolve the missing approval before confirming the plan? It names the unresolved condition and a practical next step.

# Give feedback that helps

Score each criterion 0, 1, or 2. This is a practice rubric, not a professional qualification or CEFR test. Do not award or remove points for a particular accent.

## Meaning and accuracy

Keeps the case facts accurate; clearly separates confirmed and unknown information.

## Clarity and language

Uses understandable sentences and explains specialist terms when the listener needs it.

## Interaction and tone

Responds to the other person's question, checks understanding, and uses an appropriate tone.

## Task completion

Makes the requested action or unresolved question clear without inventing authority or facts.

## Use the same scale for each criterion

0 - Not yet: The reader or listener cannot yet recover the intended meaning or action.

1 - With support: The message works after a prompt, clarification, or revision.

2 - Independently: The message is clear and accurate without a prompt.

## Feedback sequence

First, identify a successful phrase. Next, identify one point where meaning or accuracy needs work. Offer one useful language correction, allow a repeat, and compare the two attempts. A total out of eight describes this performance only; do not translate it into a proficiency level.

## Final challenge

Choose a case not rehearsed today. The learner gives a one-minute response, answers two follow-up questions, and writes a 70-110 word message. Add the lesson's second-round challenge. Compare the result with an earlier attempt using the four criteria.

# Use the language responsibly

Fictional language practice for professional communication. Clinical, safety, regulatory, and patient-care decisions follow qualified supervision and current local procedures.

## Meaning before performance

Use specialist terms only when they help the listener. Explain unfamiliar words, preserve uncertainty, and ask when an instruction or responsibility is unclear. The model responses illustrate language; they do not authorize professional actions.

## Sources and further reading

The cases, workshops, and explanations are original teaching material. These references provide language frameworks and selected professional context. References were checked in September 2026; consult current local guidance for actual work.
