

Nursing and Allied Health English Dialogue Lab

Realistic field-specific dialogues, role-play variations, and observer checklists

Audience: nurses, charge nurses, physical therapists, occupational therapists, respiratory therapists, imaging staff, laboratory staff, care-team coordinators, and allied-health supervisors

Focus: A clinical workplace English curriculum for nursing and allied health learners who need handoff, escalation, patient education, documentation, interprofessional communication, safety-event, discharge, and conflict language.

Designed for advanced ESL learners who already use professional English and need industry-specific terminology, realistic meetings, role-play pressure, careful pushback, and polished workplace outputs.

Teaching stance: this is language and workplace-communication training, not legal, medical, financial, safety, or regulatory advice. Instructors should connect every scenario to the learner's current company policies, local rules, and approved procedures.

Dialogue Practice Method

Read each exchange once for meaning, once for tone, and once for decision structure. Then complete the missing language by selecting one of four options and check the rationale at the end.

1. Shift Handoffs and Clinical Prioritization

Setting

A night nurse hands off a patient with changing vitals and incomplete labs.

Speaker	Line
Charge nurse	Keep the report short and skip details.
Incoming nurse	The receiving clinician needs severity, trend, pending actions, and contingency triggers.
ESL learner	I understand the goal, but we need to separate urgency from control. For this decision, I need to confirm SBAR, acuity, the owner, and the evidence standard before we commit.
Charge nurse	What would let us move forward without slowing everything down?
ESL learner	Let's document the assumption, define the risk trigger, and create a short SBAR handoff script. Then we can decide whether to proceed, escalate, or revise the plan.

Language notes

- The learner names the field-specific control point instead of giving a vague no: SBAR, acuity.
- The response preserves the business goal while adding evidence, owner, and next-step discipline.

Three-step decision practice

1. Complete the field language

Choose the term that belongs in this decision point.

Before we act, I need to confirm the _____ and how it affects acuity.

Option	Phrase
A	SBAR
B	acuity
C	pending lab
D	watcher

2. Choose the strongest professional response

Select the response that preserves the relationship while setting an evidence-based boundary.

A stakeholder says, 'Keep the report short and skip details.' Which response gives a useful, professional form of pushback?

Option	Phrase
A	A SBAR handoff script is unnecessary; verbal assurance should be enough.
B	I disagree, but I cannot name the boundary or the decision the group needs to make.
C	I understand the urgency. I need to verify SBAR and acuity against the stated constraint before I recommend the next step.

Option	Phrase
D	We should act now and resolve SBAR after the result is visible.

3. Select the next decision move

Choose the action that turns the discussion into a controlled workplace decision.

Given this situation - A night nurse hands off a patient with changing vitals and incomplete labs. - what should happen next?

Option	Phrase
A	approval path
B	Review the stated constraint with the accountable owner, then prepare the SBAR handoff script with the evidence, tradeoff, and requested decision.
C	Wait for the problem to become visible before assigning an owner or evidence source.
D	evidence threshold

Observer checklist

- Did the learner name the decision and the risk?
- Did the learner use at least two industry terms accurately?
- Did the learner give a concrete next step without overpromising?

2. Patient Assessment and Escalation

Setting

A patient is becoming short of breath after surgery.

Speaker	Line
Bedside nurse	Wait for the next scheduled assessment.
Resident physician	Respiratory status, vital-sign trends, and escalation criteria require immediate communication.
ESL learner	I understand the goal, but we need to separate urgency from control. For this decision, I need to confirm vital signs, rapid response, the owner, and the evidence standard before we commit.
Bedside nurse	What would let us move forward without slowing everything down?
ESL learner	Let's document the assumption, define the risk trigger, and create a short clinical escalation call. Then we can decide whether to proceed, escalate, or revise the plan.

Language notes

- The learner names the field-specific control point instead of giving a vague no: vital signs, rapid response.
- The response preserves the business goal while adding evidence, owner, and next-step discipline.

Three-step decision practice

1. Complete the field language

Choose the term that belongs in this decision point.

Before we act, I need to confirm the _____ and how it affects rapid response.

Option	Phrase
A	rapid response
B	clinical deterioration
C	escalation
D	vital signs

2. Choose the strongest professional response

Select the response that preserves the relationship while setting an evidence-based boundary.

A stakeholder says, 'Wait for the next scheduled assessment.' Which response gives a useful, professional form of pushback?

Option	Phrase
A	I understand the urgency. I need to verify vital signs and rapid response against the stated constraint before I recommend the next step.
B	A clinical escalation call is unnecessary; verbal assurance should be enough.
C	I disagree, but I cannot name the boundary or the decision the group needs to make.
D	evidence threshold

3. Select the next decision move

Choose the action that turns the discussion into a controlled workplace decision.

Given this situation - A patient is becoming short of breath after surgery. - what should happen next?

Option	Phrase
A	Accept the request immediately because the stakeholder has already expressed urgency.
B	Send every available detail to senior leaders without identifying the decision they need to make.
C	Review the stated constraint with the accountable owner, then prepare the clinical escalation call with the evidence, tradeoff, and requested decision.
D	decision owner

Observer checklist

- Did the learner name the decision and the risk?
- Did the learner use at least two industry terms accurately?
- Did the learner give a concrete next step without overpromising?

3. Medication Safety and Allergy Clarification

Setting

A medication order conflicts with a documented allergy.

Speaker	Line
Staff nurse	Administer it because the physician ordered it.
Pharmacist	Patient safety requires clarification, documentation, and closed-loop communication.

Speaker	Line
ESL learner	I understand the goal, but we need to separate urgency from control. For this decision, I need to confirm allergy, contraindication, the owner, and the evidence standard before we commit.
Staff nurse	What would let us move forward without slowing everything down?
ESL learner	Let's document the assumption, define the risk trigger, and create a short medication clarification note. Then we can decide whether to proceed, escalate, or revise the plan.

Language notes

- The learner names the field-specific control point instead of giving a vague no: allergy, contraindication.
- The response preserves the business goal while adding evidence, owner, and next-step discipline.

Three-step decision practice

1. Complete the field language

Choose the term that belongs in this decision point.

Before we act, I need to confirm the _____ and how it affects contraindication.

Option	Phrase
A	allergy
B	evidence threshold
C	approval path
D	operating constraint

2. Choose the strongest professional response

Select the response that preserves the relationship while setting an evidence-based boundary.

A stakeholder says, 'Administer it because the physician ordered it.' Which response gives a useful, professional form of pushback?

Option	Phrase
A	I disagree, but I cannot name the boundary or the decision the group needs to make.
B	evidence threshold
C	I understand the urgency. I need to verify allergy and contraindication against the stated constraint before I recommend the next step.
D	A medication clarification note is unnecessary; verbal assurance should be enough.

3. Select the next decision move

Choose the action that turns the discussion into a controlled workplace decision.

Given this situation - A medication order conflicts with a documented allergy. - what should happen next?

Option	Phrase
A	Send every available detail to senior leaders without identifying the decision they need to make.
B	Review the stated constraint with the accountable owner, then prepare the medication clarification note with the evidence, tradeoff, and requested decision.
C	decision owner

Option	Phrase
D	Accept the request immediately because the stakeholder has already expressed urgency.

Observer checklist

- Did the learner name the decision and the risk?
- Did the learner use at least two industry terms accurately?
- Did the learner give a concrete next step without overpromising?

4. Patient Education and Teach-Back

Setting

A patient nods during discharge teaching but cannot describe the plan.

Speaker	Line
Discharge nurse	Just print the instructions.
Patient	Teach-back is needed to confirm understanding and reduce avoidable return visits.
ESL learner	I understand the goal, but we need to separate urgency from control. For this decision, I need to confirm teach-back, discharge instructions, the owner, and the evidence standard before we commit.
Discharge nurse	What would let us move forward without slowing everything down?
ESL learner	Let's document the assumption, define the risk trigger, and create a short teach-back dialogue. Then we can decide whether to proceed, escalate, or revise the plan.

Language notes

- The learner names the field-specific control point instead of giving a vague no: teach-back, discharge instructions.
- The response preserves the business goal while adding evidence, owner, and next-step discipline.

Three-step decision practice

1. Complete the field language

Choose the term that belongs in this decision point.

Before we act, I need to confirm the _____ and how it affects discharge instructions.

Option	Phrase
A	discharge instructions
B	health literacy
C	teach-back
D	decision owner

2. Choose the strongest professional response

Select the response that preserves the relationship while setting an evidence-based boundary.

A stakeholder says, 'Just print the instructions.' Which response gives a useful, professional form of pushback?

Option	Phrase
A	A teach-back dialogue is unnecessary; verbal assurance should be enough.
B	I disagree, but I cannot name the boundary or the decision the group needs to make.

Option	Phrase
C	I understand the urgency. I need to verify teach-back and discharge instructions against the stated constraint before I recommend the next step.
D	We should act now and resolve teach-back after the result is visible.

3. Select the next decision move

Choose the action that turns the discussion into a controlled workplace decision.

Given this situation - A patient nods during discharge teaching but cannot describe the plan. - what should happen next?

Option	Phrase
A	approval path
B	operating constraint
C	Review the stated constraint with the accountable owner, then prepare the teach-back dialogue with the evidence, tradeoff, and requested decision.
D	evidence threshold

Observer checklist

- Did the learner name the decision and the risk?
- Did the learner use at least two industry terms accurately?
- Did the learner give a concrete next step without overpromising?

5. Interprofessional Rounds

Setting

The team is debating whether the patient is safe to go home.

Speaker	Line
Physical therapist	Let the physician decide without allied-health input.
Hospitalist	Mobility, oxygen needs, home support, and follow-up resources affect safety.
ESL learner	I understand the goal, but we need to separate urgency from control. For this decision, I need to confirm plan of care, functional status, the owner, and the evidence standard before we commit.
Physical therapist	What would let us move forward without slowing everything down?
ESL learner	Let's document the assumption, define the risk trigger, and create a short rounds contribution. Then we can decide whether to proceed, escalate, or revise the plan.

Language notes

- The learner names the field-specific control point instead of giving a vague no: plan of care, functional status.
- The response preserves the business goal while adding evidence, owner, and next-step discipline.

Three-step decision practice

1. Complete the field language

Choose the term that belongs in this decision point.

Before we act, I need to confirm the _____ and how it affects functional status.

Option	Phrase
A	case management
B	safe discharge
C	evidence threshold
D	plan of care

2. Choose the strongest professional response

Select the response that preserves the relationship while setting an evidence-based boundary.

A stakeholder says, 'Let the physician decide without allied-health input.' Which response gives a useful, professional form of pushback?

Option	Phrase
A	evidence threshold
B	I understand the urgency. I need to verify plan of care and functional status against the stated constraint before I recommend the next step.
C	A rounds contribution is unnecessary; verbal assurance should be enough.
D	I disagree, but I cannot name the boundary or the decision the group needs to make.

3. Select the next decision move

Choose the action that turns the discussion into a controlled workplace decision.

Given this situation - The team is debating whether the patient is safe to go home. - what should happen next?

Option	Phrase
A	approval path
B	operating constraint
C	decision owner
D	Review the stated constraint with the accountable owner, then prepare the rounds contribution with the evidence, tradeoff, and requested decision.

Observer checklist

- Did the learner name the decision and the risk?
- Did the learner use at least two industry terms accurately?
- Did the learner give a concrete next step without overpromising?

6. Documentation and Charting

Setting

A supervisor says a note sounds emotional and unclear.

Speaker	Line
Clinical supervisor	Write exactly what you felt happened.
Staff clinician	Clinical documentation should describe observations, interventions, response, and notification.

Speaker	Line
ESL learner	I understand the goal, but we need to separate urgency from control. For this decision, I need to confirm charting, objective finding, the owner, and the evidence standard before we commit.
Clinical supervisor	What would let us move forward without slowing everything down?
ESL learner	Let's document the assumption, define the risk trigger, and create a short objective charting rewrite. Then we can decide whether to proceed, escalate, or revise the plan.

Language notes

- The learner names the field-specific control point instead of giving a vague no: charting, objective finding.
- The response preserves the business goal while adding evidence, owner, and next-step discipline.

Three-step decision practice

1. Complete the field language

Choose the term that belongs in this decision point.

Before we act, I need to confirm the _____ and how it affects objective finding.

Option	Phrase
A	approval path
B	operating constraint
C	decision owner
D	charting

2. Choose the strongest professional response

Select the response that preserves the relationship while setting an evidence-based boundary.

A stakeholder says, 'Write exactly what you felt happened.' Which response gives a useful, professional form of pushback?

Option	Phrase
A	A objective charting rewrite is unnecessary; verbal assurance should be enough.
B	I disagree, but I cannot name the boundary or the decision the group needs to make.
C	I understand the urgency. I need to verify charting and objective finding against the stated constraint before I recommend the next step.
D	We should act now and resolve charting after the result is visible.

3. Select the next decision move

Choose the action that turns the discussion into a controlled workplace decision.

Given this situation - A supervisor says a note sounds emotional and unclear. - what should happen next?

Option	Phrase
A	Review the stated constraint with the accountable owner, then prepare the objective charting rewrite with the evidence, tradeoff, and requested decision.
B	Send every available detail to senior leaders without identifying the decision they need to make.
C	Wait for the problem to become visible before assigning an owner or evidence source.

Option	Phrase
D	evidence threshold

Observer checklist

- Did the learner name the decision and the risk?
- Did the learner use at least two industry terms accurately?
- Did the learner give a concrete next step without overpromising?

7. Difficult Families and Boundaries

Setting

A family demands test results before the provider has reviewed them.

Speaker	Line
Charge nurse	Give them whatever information is available.
Family member	Scope, privacy, clinical authority, and emotional support all matter.
ESL learner	I understand the goal, but we need to separate urgency from control. For this decision, I need to confirm scope of practice, privacy, the owner, and the evidence standard before we commit.
Charge nurse	What would let us move forward without slowing everything down?
ESL learner	Let's document the assumption, define the risk trigger, and create a short family communication script. Then we can decide whether to proceed, escalate, or revise the plan.

Language notes

- The learner names the field-specific control point instead of giving a vague no: scope of practice, privacy.
- The response preserves the business goal while adding evidence, owner, and next-step discipline.

Three-step decision practice

1. Complete the field language

Choose the term that belongs in this decision point.

Before we act, I need to confirm the _____ and how it affects privacy.

Option	Phrase
A	boundary
B	evidence threshold
C	approval path
D	scope of practice

2. Choose the strongest professional response

Select the response that preserves the relationship while setting an evidence-based boundary.

A stakeholder says, 'Give them whatever information is available.' Which response gives a useful, professional form of pushback?

Option	Phrase
A	evidence threshold

Option	Phrase
B	approval path
C	I understand the urgency. I need to verify scope of practice and privacy against the stated constraint before I recommend the next step.
D	I disagree, but I cannot name the boundary or the decision the group needs to make.

3. Select the next decision move

Choose the action that turns the discussion into a controlled workplace decision.

Given this situation - A family demands test results before the provider has reviewed them. - what should happen next?

Option	Phrase
A	Send every available detail to senior leaders without identifying the decision they need to make.
B	Wait for the problem to become visible before assigning an owner or evidence source.
C	Review the stated constraint with the accountable owner, then prepare the family communication script with the evidence, tradeoff, and requested decision.
D	Accept the request immediately because the stakeholder has already expressed urgency.

Observer checklist

- Did the learner name the decision and the risk?
- Did the learner use at least two industry terms accurately?
- Did the learner give a concrete next step without overpromising?

8. Safety Events and Just Culture

Setting

A fall occurred after a missed bed alarm.

Speaker	Line
Unit manager	Name the person responsible immediately.
Risk manager	A just-culture review should separate human error, system weakness, and reckless behavior.
ESL learner	I understand the goal, but we need to separate urgency from control. For this decision, I need to confirm fall risk, incident report, the owner, and the evidence standard before we commit.
Unit manager	What would let us move forward without slowing everything down?
ESL learner	Let's document the assumption, define the risk trigger, and create a short safety-event debrief. Then we can decide whether to proceed, escalate, or revise the plan.

Language notes

- The learner names the field-specific control point instead of giving a vague no: fall risk, incident report.
- The response preserves the business goal while adding evidence, owner, and next-step discipline.

Three-step decision practice

1. Complete the field language

Choose the term that belongs in this decision point.

Before we act, I need to confirm the _____ and how it affects incident report.

Option	Phrase
A	decision owner
B	incident report
C	fall risk
D	operating constraint

2. Choose the strongest professional response

Select the response that preserves the relationship while setting an evidence-based boundary.

A stakeholder says, 'Name the person responsible immediately.' Which response gives a useful, professional form of pushback?

Option	Phrase
A	operating constraint
B	decision owner
C	I understand the urgency. I need to verify fall risk and incident report against the stated constraint before I recommend the next step.
D	approval path

3. Select the next decision move

Choose the action that turns the discussion into a controlled workplace decision.

Given this situation - A fall occurred after a missed bed alarm. - what should happen next?

Option	Phrase
A	evidence threshold
B	Review the stated constraint with the accountable owner, then prepare the safety-event debrief with the evidence, tradeoff, and requested decision.
C	Send every available detail to senior leaders without identifying the decision they need to make.
D	Wait for the problem to become visible before assigning an owner or evidence source.

Observer checklist

- Did the learner name the decision and the risk?
- Did the learner use at least two industry terms accurately?
- Did the learner give a concrete next step without overpromising?

Answer Key and Rationale

Check each stage after completing the practice sequence. The rationale explains the decision skill the strongest response demonstrates.

Shift Handoffs and Clinical Prioritization - 1. Complete the field language

Correct answer	Why it fits
A. SBAR	'SBAR' is the field-specific variable that must be checked before the team can proceed responsibly. This is the decision variable the learner must confirm before the team acts.

Shift Handoffs and Clinical Prioritization - 2. Choose the strongest professional response

Correct answer	Why it fits
C. I understand the urgency. I need to verify SBAR and acuity against the stated constraint before I recommend the next step.	The strongest response names the field terms, the constraint, and the condition for a recommendation without sounding defensive or passive. This response is specific, respectful, and appropriately conditional. It converts pressure into a controlled decision.

Shift Handoffs and Clinical Prioritization - 3. Select the next decision move

Correct answer	Why it fits
B. Review the stated constraint with the accountable owner, then prepare the SBAR handoff script with the evidence, tradeoff, and requested decision.	The best next move makes the evidence, tradeoff, owner, and requested decision visible in a concise workplace artifact. This sequence creates a concise, decision-ready artifact with a clear owner and evidence boundary.

Patient Assessment and Escalation - 1. Complete the field language

Correct answer	Why it fits
D. vital signs	'vital signs' is the field-specific variable that must be checked before the team can proceed responsibly. This is the decision variable the learner must confirm before the team acts.

Patient Assessment and Escalation - 2. Choose the strongest professional response

Correct answer	Why it fits
A. I understand the urgency. I need to verify vital signs and rapid response against the stated constraint before I recommend the next step.	The strongest response names the field terms, the constraint, and the condition for a recommendation without sounding defensive or passive. This response is specific, respectful, and appropriately conditional. It converts pressure into a controlled decision.

Patient Assessment and Escalation - 3. Select the next decision move

Correct answer	Why it fits
C. Review the stated constraint with the accountable owner, then prepare the clinical escalation call with the evidence, tradeoff, and requested decision.	The best next move makes the evidence, tradeoff, owner, and requested decision visible in a concise workplace artifact. This sequence creates a concise, decision-ready artifact with a clear owner and evidence boundary.

Medication Safety and Allergy Clarification - 1. Complete the field language

Correct answer	Why it fits
A. allergy	'allergy' is the field-specific variable that must be checked before the team can proceed responsibly. This is the decision variable the learner must confirm before the team acts.

Medication Safety and Allergy Clarification - 2. Choose the strongest professional response

Correct answer	Why it fits
C. I understand the urgency. I need to verify allergy and contraindication against the stated constraint before I recommend the next step.	The strongest response names the field terms, the constraint, and the condition for a recommendation without sounding defensive or passive. This response is specific, respectful, and appropriately conditional. It converts pressure into a controlled decision.

Medication Safety and Allergy Clarification - 3. Select the next decision move

Correct answer	Why it fits
B. Review the stated constraint with the accountable owner, then prepare the medication clarification note with the evidence, tradeoff, and requested decision.	The best next move makes the evidence, tradeoff, owner, and requested decision visible in a concise workplace artifact. This sequence creates a concise, decision-ready artifact with a clear owner and evidence boundary.

Patient Education and Teach-Back - 1. Complete the field language

Correct answer	Why it fits
C. teach-back	'teach-back' is the field-specific variable that must be checked before the team can proceed responsibly. This is the decision variable the learner must confirm before the team acts.

Patient Education and Teach-Back - 2. Choose the strongest professional response

Correct answer	Why it fits
C. I understand the urgency. I need to verify teach-back and discharge instructions against the stated constraint before I recommend the next step.	The strongest response names the field terms, the constraint, and the condition for a recommendation without sounding defensive or passive. This response is specific, respectful, and appropriately conditional. It converts pressure into a controlled decision.

Patient Education and Teach-Back - 3. Select the next decision move

Correct answer	Why it fits
C. Review the stated constraint with the accountable owner, then prepare the teach-back dialogue with the evidence, tradeoff, and requested decision.	The best next move makes the evidence, tradeoff, owner, and requested decision visible in a concise workplace artifact. This sequence creates a concise, decision-ready artifact with a clear owner and evidence boundary.

Interprofessional Rounds - 1. Complete the field language

Correct answer	Why it fits
D. plan of care	'plan of care' is the field-specific variable that must be checked before the team can proceed responsibly. This is the decision variable the learner must confirm before the team acts.

Interprofessional Rounds - 2. Choose the strongest professional response

Correct answer	Why it fits
B. I understand the urgency. I need to verify plan of care and functional status against the stated constraint before I recommend the next step.	The strongest response names the field terms, the constraint, and the condition for a recommendation without sounding defensive or passive. This response is specific, respectful, and appropriately conditional. It converts pressure into a controlled decision.

Interprofessional Rounds - 3. Select the next decision move

Correct answer	Why it fits
D. Review the stated constraint with the accountable owner, then prepare the rounds contribution with the evidence, tradeoff, and requested decision.	The best next move makes the evidence, tradeoff, owner, and requested decision visible in a concise workplace artifact. This sequence creates a concise, decision-ready artifact with a clear owner and evidence boundary.

Documentation and Charting - 1. Complete the field language

Correct answer	Why it fits
D. charting	'charting' is the field-specific variable that must be checked before the team can proceed responsibly. This is the decision variable the learner must confirm before the team acts.

Documentation and Charting - 2. Choose the strongest professional response

Correct answer	Why it fits
C. I understand the urgency. I need to verify charting and objective finding against the stated constraint before I recommend the next step.	The strongest response names the field terms, the constraint, and the condition for a recommendation without sounding defensive or passive. This response is specific, respectful, and appropriately conditional. It converts pressure into a controlled decision.

Documentation and Charting - 3. Select the next decision move

Correct answer	Why it fits
A. Review the stated constraint with the accountable owner, then prepare the objective charting rewrite with the evidence, tradeoff, and requested decision.	The best next move makes the evidence, tradeoff, owner, and requested decision visible in a concise workplace artifact. This sequence creates a concise, decision-ready artifact with a clear owner and evidence boundary.

Difficult Families and Boundaries - 1. Complete the field language

Correct answer	Why it fits
D. scope of practice	'scope of practice' is the field-specific variable that must be checked before the team can proceed responsibly. This is the decision variable the learner must confirm before the team acts.

Difficult Families and Boundaries - 2. Choose the strongest professional response

Correct answer	Why it fits
C. I understand the urgency. I need to verify scope of practice and privacy against the stated constraint before I recommend the next step.	The strongest response names the field terms, the constraint, and the condition for a recommendation without sounding defensive or passive. This response is specific, respectful, and appropriately conditional. It converts pressure into a controlled decision.

Difficult Families and Boundaries - 3. Select the next decision move

Correct answer	Why it fits
C. Review the stated constraint with the accountable owner, then prepare the family communication script with the evidence, tradeoff, and requested decision.	The best next move makes the evidence, tradeoff, owner, and requested decision visible in a concise workplace artifact. This sequence creates a concise, decision-ready artifact with a clear owner and evidence boundary.

Safety Events and Just Culture - 1. Complete the field language

Correct answer	Why it fits
C. fall risk	'fall risk' is the field-specific variable that must be checked before the team can proceed responsibly. This is the decision variable the learner must confirm before the team acts.

Safety Events and Just Culture - 2. Choose the strongest professional response

Correct answer	Why it fits
C. I understand the urgency. I need to verify fall risk and incident report against the stated constraint before I recommend the next step.	The strongest response names the field terms, the constraint, and the condition for a recommendation without sounding defensive or passive. This response is specific, respectful, and appropriately conditional. It converts pressure into a controlled decision.

Safety Events and Just Culture - 3. Select the next decision move

Correct answer	Why it fits
B. Review the stated constraint with the accountable owner, then prepare the safety-event debrief with the evidence, tradeoff, and requested decision.	The best next move makes the evidence, tradeoff, owner, and requested decision visible in a concise workplace artifact. This sequence creates a concise, decision-ready artifact with a clear owner and evidence boundary.
