

ENGLISH FOR WORK / SEPTEMBER 2026

Supply Chain and Logistics English

Teacher's guide

Teach practical workplace communication with specific cases, clear language targets, and a repeatable feedback process.

PRACTICE THAT TRANSFERS TO WORK

Read a realistic case. Study complete conversations. Find the right language, speak, get feedback, and try again.

Eight lessons | Intermediate to advanced | Independent or classroom study

For supply-chain managers, planners, buyers, logistics coordinators, warehouse leaders, procurement teams, customs staff, and operations managers.

All cases and figures are fictional. Adapt the language to your role and organization's current procedures, using invented details for practice.

All scenarios, figures, and model responses are fictional teaching material. Use invented details in practice.

[Open this course on English Ladder](#)

Your course at a glance

Use the lesson numbers to match this document with the website and the other guides.

01 Demand Planning and Forecast Bias

Separate observations, assumptions, and conclusions.

02 Procurement and Supplier Performance

Make a request with a clear action, purpose, and realistic timing.

03 Inventory, Safety Stock, and Service Levels

Explain a useful distinction in plain English.

04 Warehousing and Fulfillment

Distinguish completed work from pending work and explain its impact.

05 Freight, Routing, and Carrier Delays

Separate observations, assumptions, and conclusions.

06 Customs, Trade Compliance, and Documentation

Clarify missing information before responding.

07 Supply Risk and Business Continuity

Compare options using the same criteria and state the tradeoff.

08 Executive S&OP Decisions

Include relevant voices and clarify the decision process.

Choose your pace

Quick practice: spend 15 minutes reading one conversation and rehearsing one scenario. Full lesson: allow 45-60 minutes for language work, three conversations, two speaking scenarios, and feedback.

Level support

B1 learners can use the frames and a partner. B2 learners can try a response before reading the model. C1 learners can add the harder follow-up and reduce preparation time. These are teaching suggestions, not certified CEFR level ratings.

After practicing: open the AI prompt workshop, or use the prompts at the end of this guide.

A 60-minute lesson that works

Prepare the case and the learner pages. Keep the model response hidden until learners have attempted their own. Choose two field terms that are important to understanding the case.

0-5 minutes | Activate experience

Ask learners to name a comparable situation without sharing confidential details. Introduce the communication goal.

5-12 minutes | Read and sort facts

Read the case. Learners identify confirmed facts, unknowns, the audience, and the immediate communication need.

12-22 minutes | Notice and practice language

Explain the workshop pattern. Work through the vocabulary and editing example, then discuss both language checks and the reasons behind the choices.

22-35 minutes | 05 • Conversations

Read one ten-turn conversation aloud, notice a useful expression, then compare the other two. Identify each speaker's purpose and how the exchange ends.

35-47 minutes | 06 • Say it

Rehearse both speaking scenarios from the workbook. Give two minutes of preparation, switch roles, and use the success checks. Add the complication only after a successful first round.

47-55 minutes | Compare and revise

Reveal the model. Discuss alternative acceptable wording. Give one meaning correction and one language correction, then repeat.

55-60 minutes | Retrieve and transfer

Close the materials. Learners recall two expressions and identify one communication habit to use in another situation.

Adapt the session

For 45 minutes, study one complete conversation and rehearse one scenario; assign the others for oral follow-up. For 90 minutes, rehearse all three conversations and give both scenarios a second round. More time should produce more meaningful practice, not longer explanations.

LESSON 01 / FACILITATOR NOTES

Demand Planning and Forecast Bias

Separate observations, assumptions, and conclusions.

CASE

A forecast exceeds actual demand for three months. Sales expects a new promotion to improve demand but has no order evidence yet.

Teach this move

Say what the evidence shows, identify what is still unknown, and limit the conclusion to that evidence. Words such as 'may', 'suggests', and 'in this sample' are useful when the uncertainty is real. Do not soften an urgent, verified safety concern.

Vocabulary to check: forecast, forecast bias, demand signal, S&OP.

Model response

The forecast has been above actual demand for three months. The promotion may change that pattern, but it is still an assumption. I'll separate confirmed orders from the promotional estimate.

Listen for, then coach

Ask learners to point to the case fact behind each important statement. Accept different wording when it preserves meaning, fits the listener, and does not invent an outcome. The revision states the finding and its scope. It avoids turning limited evidence into a universal claim.

Second-round challenge

Someone asks for a yes-or-no answer when the evidence supports only a qualified answer. Be concise while preserving the uncertainty.

Language-check answers

1. A - The change may have contributed to the delay. 'May have contributed' presents a possibility without claiming the cause is established.
2. C - In this pilot, the observed result was ... This locates the finding in the setting actually studied.

05 · Conversations

1. Three months of overforecast before a promotion - Fictional demand review: the forecast exceeded actual demand for three months; sales expects a promotion to help, but no supporting orders exist yet.
2. A one-time order inside the baseline - Separate fictional planning case: last month's demand included a one-time order of 200 units; whether it will repeat is unconfirmed.

3. Orders shifted between months are not necessarily growth - Separate fictional demand analysis: 80 units originally requested for June were moved to May; no additional quantity was ordered.

Use the complete ten-turn scripts in the learner workbook and conversation lab. Read with roles, identify the decision or open question, then replay without reading.

06 · Say it: second scenario | A distributor inquiry mistaken for an order

A fictional distributor asks whether 500 units could be available next month but submits no purchase order. Sales wants to add all 500 as confirmed demand. Discuss the distinction and an appropriately labeled planning scenario.

Role A: Demand planner: distinguish the inquiry from a commitment.

Role B: Account manager: explain the potential opportunity and agree how to obtain a clearer demand signal.

Possible opening: The five hundred units are an availability inquiry, not a confirmed order yet.

Success checks

- Keep inquiry quantity separate from committed demand.
- Avoid predicting whether the order will materialize.
- Agree a labeled scenario and a specific confirmation request.

Add a complication: The sales lead says a confident tone from the distributor is enough evidence.

AI extension: adapt this lesson for your learners and available time.

LESSON 02 / FACILITATOR NOTES

Procurement and Supplier Performance

Make a request with a clear action, purpose, and realistic timing.

CASE

A supplier acknowledges an order but gives no shipping date. The planning team needs a date to update its schedule.

Teach this move

State the action and the information needed. Explain why it matters and specify a deadline only when one is given or agreed. 'Could you' is polite; repeated apologies can obscure a legitimate request. Urgent situations may require a direct request.

Vocabulary to check: purchase order, lead time, OTIF, allocation.

Model response

Could you confirm the planned ship date and any quantity that will remain outstanding? Please distinguish a confirmed commitment from a provisional estimate so we can update the schedule accurately.

Listen for, then coach

Ask learners to point to the case fact behind each important statement. Accept different wording when it preserves meaning, fits the listener, and does not invent an outcome. The revision names the document and requested response. It avoids expressions that may be unfamiliar or ambiguous for an international audience.

Second-round challenge

The other person cannot meet the requested timing. Clarify an alternative without inventing authority to change a formal deadline.

Language-check answers

1. C - Send it no later than Thursday. 'By' sets the latest point, while 'after' refers to a later time.
2. B - Could you confirm the document version needed for the review? The requested action and information are explicit.

05 · Conversations

1. An acknowledgment without a shipping date - Fictional procurement call: the supplier acknowledged purchase order 612 but provided no shipping date; the planning review is tomorrow afternoon.
2. A partial shipment needs a quantity and date - Separate fictional supplier case: order 733 is for 400 units; the supplier offers a partial shipment without specifying quantity or dispatch date.

3. Confirm the OTIF measure before the supplier review - Separate fictional performance meeting: the buyer calculates OTIF by order, while the supplier's presentation calculates it by order line; the joint review is Friday.

Use the complete ten-turn scripts in the learner workbook and conversation lab. Read with roles, identify the decision or open question, then replay without reading.

06 · Say it: second scenario | Lead time without a starting point

A fictional supplier quotes ten working days but does not say whether the clock starts at order receipt or technical approval. Approval has not occurred. Request a precise lead-time definition before updating the schedule.

Role A: Buyer: ask for the start event, delivery milestone, and current order status.

Role B: Supplier planner: acknowledge the ambiguity and arrange confirmation without inventing a shipment date.

Possible opening: When you say ten working days, does that start at order receipt or technical approval?

Success checks

- Clarify the lead-time starting event and endpoint.
- Separate acknowledgment from technical approval.
- Agree a confirmation response before making a dated commitment.

Add a complication: The internal planner has already counted ten days from yesterday's acknowledgment.

AI extension: adapt this lesson for your learners and available time.

LESSON 03 / FACILITATOR NOTES

Inventory, Safety Stock, and Service Levels

Explain a useful distinction in plain English.

CASE

A warehouse has high total inventory but repeated stockouts of two important items. A manager asks why the headline total looks healthy.

Teach this move

Start with the reader's question. Explain one unfamiliar term with familiar words, then give a relevant example or contrast. Check understanding without asking only 'Do you understand?'.

Vocabulary to check: safety stock, stockout, service level, SKU.

Model response

The total inventory value hides differences between items. We have stock in some products but shortages in two others. Let's review availability by item and expected demand.

Listen for, then coach

Ask learners to point to the case fact behind each important statement. Accept different wording when it preserves meaning, fits the listener, and does not invent an outcome. The revised sentence names the action in familiar words. Specialist vocabulary is useful when it adds precision, but repeating abstract nouns can hide the meaning.

Second-round challenge

Your listener is new to this field. Replace two specialist expressions with clear explanations without changing the meaning.

Language-check answers

1. B - The backlog is the work still waiting to be completed. This gives the meaning in familiar words.
2. A - How would you describe the next step in your own words? An open request lets the listener show their understanding.

05 • Conversations

1. High total stock with two recurring stockouts - Fictional inventory review: total inventory is high, but two important SKUs repeatedly stock out; item-level demand and stock policies need review.
2. On-hand stock versus stock available to promise - Separate fictional inventory case: SKU Q5 has 100 units on hand, of which 70 are already allocated; no other holds or receipts are included.

3. A service percentage needs its denominator - Separate fictional service review: nine of ten orders shipped complete, but those nine contained only half of the units ordered in total.

Use the complete ten-turn scripts in the learner workbook and conversation lab. Read with roles, identify the decision or open question, then replay without reading.

06 · Say it: second scenario | An incoming delivery mistaken for current stock

A fictional SKU has 20 units physically on hand and 80 expected next week. The expected receipt is not confirmed. A screen combines them as 100 planned units. Explain current availability without making a shipment promise.

Role A: Inventory controller: separate present stock from the expected receipt.

Role B: Customer service coordinator: ask what can be verified before offering an order commitment.

Possible opening: Only twenty units are currently on hand; the other eighty are an unconfirmed expected receipt.

Success checks

- Keep present and expected quantities separate.
- Do not assume current stock is unallocated unless checked.
- Agree the allocation and receipt checks needed before a promise.

Add a complication: A colleague wants to call the combined total available inventory.

AI extension: adapt this lesson for your learners and available time.

LESSON 04 / FACILITATOR NOTES

Warehousing and Fulfillment

Distinguish completed work from pending work and explain its impact.

CASE

A fulfillment team starts with 300 open orders and ships 220. Fifty new orders arrive during the shift.

Teach this move

Lead with the current state, then the important change or open item. Use completed-action language only for completed work. Add a next update point when it is known; do not invent a date to make the message sound complete.

Vocabulary to check: pick rate, slotting, cycle count, backlog.

Model response

We shipped 220 orders, and 50 new orders arrived. The backlog is now 130 orders. I'll include both completed work and incoming demand so the change is clear.

Listen for, then coach

Ask learners to point to the case fact behind each important statement. Accept different wording when it preserves meaning, fits the listener, and does not invent an outcome. The revision gives observable progress. A positive label alone does not tell the reader what is complete or still needed.

Second-round challenge

The listener asks you to reduce the update to two sentences. Preserve the most important completed and pending items.

Language-check answers

1. A - The team has completed the review. 'Has completed' states that the action is finished.
2. C - Delivery is planned for Friday; the carrier has not confirmed it. This explicitly labels the date as planned and identifies the missing confirmation.

05 • Conversations

1. The backlog is 130, not 80 - Fictional fulfillment shift: 300 orders were open at the start, 220 shipped, and 50 new orders arrived; there were no other order-status changes.
2. Picked is not shipped - Separate fictional warehouse update: 75 orders are picked, 60 of those are packed, and none have confirmed carrier handover yet.

3. Cycle counting covers only the checked locations - Separate fictional warehouse exercise: a cycle count covered 12 of 20 planned locations; eight remain uncounted, and reconciliation of the counted locations is pending.

Use the complete ten-turn scripts in the learner workbook and conversation lab. Read with roles, identify the decision or open question, then replay without reading.

06 · Say it: second scenario | A returned order reenters the work queue

A fictional shift begins with 90 open orders, ships 40, and receives 10 returned orders requiring new fulfillment work. No new sales orders arrive. Explain the closing work queue under this supplied counting rule.

Role A: Fulfillment lead: report the 60-order closing queue and distinguish returns from new sales.

Role B: Operations analyst: check the arithmetic and ask how the returned work is labeled.

Possible opening: The closing queue is sixty: ninety minus forty shipped, plus ten returned orders needing work.

Success checks

- Calculate the closing queue as sixty under the stated rule.
- Distinguish returned work from new sales orders.
- Avoid inferring return causes or stock availability.

Add a complication: A colleague wants to count the ten returns as new customer demand.

AI extension: adapt this lesson for your learners and available time.

LESSON 05 / FACILITATOR NOTES

Freight, Routing, and Carrier Delays

Separate observations, assumptions, and conclusions.

CASE

A carrier estimates delivery on Wednesday but has not confirmed departure. A customer asks for a guaranteed arrival time.

Teach this move

Say what the evidence shows, identify what is still unknown, and limit the conclusion to that evidence. Words such as 'may', 'suggests', and 'in this sample' are useful when the uncertainty is real. Do not soften an urgent, verified safety concern.

Vocabulary to check: incoterms, carrier, expedite, ETA.

Model response

Wednesday is the carrier's current estimate, not a confirmed arrival. Departure is still pending. I'll send the next update when the carrier confirms the shipment status.

Listen for, then coach

Ask learners to point to the case fact behind each important statement. Accept different wording when it preserves meaning, fits the listener, and does not invent an outcome. The revision states the finding and its scope. It avoids turning limited evidence into a universal claim.

Second-round challenge

Someone asks for a yes-or-no answer when the evidence supports only a qualified answer. Be concise while preserving the uncertainty.

Language-check answers

1. C - The change may have contributed to the delay. 'May have contributed' presents a possibility without claiming the cause is established.
2. B - In this pilot, the observed result was ... This locates the finding in the setting actually studied.

05 • Conversations

1. Wednesday is an estimate before departure - Fictional freight call: the carrier estimates Wednesday delivery but has not confirmed departure; the customer requests a guaranteed arrival time.
2. A tracking scan is not proof of delivery - Separate fictional shipment case: tracking shows arrival at a regional hub at 06:00; no delivery scan or recipient confirmation exists.

3. An expedite quote is only one part of the option - Separate fictional freight exercise: a carrier quotes an expedited service price but has not confirmed collection capacity or delivery commitment.

Use the complete ten-turn scripts in the learner workbook and conversation lab. Read with roles, identify the decision or open question, then replay without reading.

06 · Say it: second scenario | Two ETA messages with different timestamps

A fictional carrier portal shows Friday delivery in an update from yesterday. A later email says Thursday estimated delivery but provides no departure confirmation. Discuss the latest estimate and remaining uncertainty without claiming a guaranteed date.

Role A: Transport planner: identify the later estimate and its unconfirmed basis.

Role B: Customer coordinator: ask what carrier confirmation is still needed.

Possible opening: The later message estimates Thursday, but neither message confirms departure or guarantees delivery.

Success checks

- State the message timing and estimated status.
- Do not treat a later estimate as a delivery guarantee.
- Agree a carrier clarification and an accurately qualified customer update.

Add a complication: The customer asks you to choose the earlier date and remove the word estimated.

AI extension: adapt this lesson for your learners and available time.

LESSON 06 / FACILITATOR NOTES

Customs, Trade Compliance, and Documentation

Clarify missing information before responding.

CASE

A shipment file contains different product descriptions on the invoice and packing list. The broker requests clarification.

Teach this move

Name the exact word, fact, or requirement you need clarified. Ask one focused question at a time. Repeat your understanding and give the other person a chance to correct it.

Vocabulary to check: HS code, country of origin, commercial invoice, broker.

Model response

The descriptions do not match across the documents. Could the responsible team confirm the correct product details and provide consistent records for the broker's review?

Listen for, then coach

Ask learners to point to the case fact behind each important statement. Accept different wording when it preserves meaning, fits the listener, and does not invent an outcome. After an introductory phrase such as 'Could you explain', the embedded question uses statement word order: "what this means".

Second-round challenge

The other person uses an ambiguous word such as 'ready', 'approved', or 'urgent'. Clarify it before continuing.

Language-check answers

1. B - Could you confirm when the review starts? The embedded question uses subject then verb: "the review starts".
2. A - Has the report been approved, or is it ready for review? This question distinguishes two meanings of 'ready' that affect the next action.

05 • Conversations

1. Two product descriptions in one shipment file - Fictional trade-document review: the commercial invoice and packing list describe the product differently; the broker requests clarification before proceeding.

2. Shipping location is not automatically country of origin - Separate fictional documentation case: goods ship from warehouse A, but their manufacturing origin is not supplied; the form asks for country of origin.

3. A code copied from a similar item - Separate fictional classification discussion: a draft invoice copies an HS code from a similar-looking item; material and function details for the new item are incomplete.

Use the complete ten-turn scripts in the learner workbook and conversation lab. Read with roles, identify the decision or open question, then replay without reading.

06 · Say it: second scenario | A package count and a unit count appear to conflict

A fictional packing list says 12 cartons while the commercial invoice says 240 units. The units per carton are not specified. The broker asks whether quantities conflict. Clarify the measurement basis before changing either document.

Role A: Shipping coordinator: identify the different counting units and request the verified pack configuration.

Role B: Customs broker: explain the missing relationship without assuming an error or conversion.

Possible opening: One document counts cartons and the other counts units; we need the verified packing quantity to compare them.

Success checks

- Distinguish cartons from individual units.
- Do not infer packing configuration solely from matching arithmetic.
- Agree a source-backed clarification before document correction.

Add a complication: A colleague suggests assuming twenty units per carton because the arithmetic fits.

AI extension: adapt this lesson for your learners and available time.

LESSON 07 / FACILITATOR NOTES

Supply Risk and Business Continuity

Compare options using the same criteria and state the tradeoff.

CASE

One supplier has a shorter lead time; a second has available backup capacity. The team is considering supply continuity options.

Teach this move

Use the same time period, scope, and measurement basis for both options. Explain a difference with 'whereas' or 'while'. State what improves and what is given up; do not hide the weaker side of a recommendation.

Vocabulary to check: business continuity, dual sourcing, allocation, constraint.

Model response

The first supplier offers speed, while the second may provide backup capacity. Let's compare availability, qualification status, and switching constraints before treating either option as a complete continuity solution.

Listen for, then coach

Ask learners to point to the case fact behind each important statement. Accept different wording when it preserves meaning, fits the listener, and does not invent an outcome. 'Better' already has comparative meaning, so it does not need 'more'. Naming the criterion and tradeoff makes the comparison useful.

Second-round challenge

Your listener focuses only on the lowest price or fastest date. Explain one other relevant comparison criterion.

Language-check answers

1. A - Option A is faster, whereas option B costs less. 'Whereas' marks a contrast between two options.
2. C - An increase of one percentage point. Subtracting 6% from 7% gives one percentage point. The relative increase is about 16.7%.

05 · Conversations

1. Shorter lead time versus available backup capacity - Fictional continuity discussion: supplier A has a shorter lead time; supplier B has available backup capacity. Other comparative details are unconfirmed.
2. Two suppliers with one shared transport constraint - Separate fictional continuity case: suppliers C and D are separate companies but both proposed routes use the same port; alternate routing has not been assessed.

3. A backup allocation smaller than the required volume - Separate fictional planning case: the continuity requirement is 1,000 units; backup supplier E offers a confirmed allocation of 300. Additional capacity is unknown.

Use the complete ten-turn scripts in the learner workbook and conversation lab. Read with roles, identify the decision or open question, then replay without reading.

06 · Say it: second scenario | Inventory buffer versus a second supply source

A fictional team can assess either extra inventory or a second supplier. The extra inventory requires storage space that is unconfirmed; the supplier requires qualification that is incomplete. No costs or lead times are supplied. Compare the dependencies without choosing from invented numbers.

Role A: Supply planner: explain the different mechanisms and unresolved conditions.

Role B: Continuity manager: ask for common criteria and identify the next evidence needs.

Possible opening: The inventory option depends on storage, while the second-source option depends on qualification.

Success checks

- Compare both options against the same continuity requirement.
- Keep storage, qualification, timing, and cost unknown where unsupplied.
- Agree evidence gathering without promising risk elimination.

Add a complication: A sponsor wants to label the second source risk-free before qualification finishes.

AI extension: adapt this lesson for your learners and available time.

LESSON 08 / FACILITATOR NOTES

Executive S&OP Decisions

Include relevant voices and clarify the decision process.

CASE

Sales and operations propose different monthly plans. The meeting has ten minutes left and no agreed assumption about the promotion.

Teach this move

Summarize the issue neutrally, invite missing perspectives, and distinguish discussion from decision. State who can decide and record any unresolved question. Do not assume silence means agreement.

Vocabulary to check: S&OP, consensus plan, scenario, owner.

Model response

The unresolved assumption is promotional demand. Could we compare the two plans using the same assumption, then record the chosen plan, its owner, and the condition that would trigger a review?

Listen for, then coach

Ask learners to point to the case fact behind each important statement. Accept different wording when it preserves meaning, fits the listener, and does not invent an outcome. The revised question gives people a way to raise a concern. Silence can have several meanings, especially in unfamiliar or unequal-power situations.

Second-round challenge

A participant interrupts or the meeting is running out of time. Protect a turn to speak and close with an accurate decision record.

Language-check answers

1. C - We haven't heard from the remote team yet; what is your view? It invites participation without interpreting silence as consent.
2. B - Approval is pending; the sponsor will review the two options. This distinguishes discussion from approval and identifies the next reviewer.

05 · Conversations

1. Ten minutes to surface the promotion assumption - Fictional S&OP meeting: ten minutes remain. Sales proposes 1,200 monthly units after two retailer inquiries suggesting 200 promotional units, but neither retailer has ordered. Operations has confirmed capacity for 1,000 units; overtime capacity is unconfirmed. Both teams can check their assumptions before tomorrow's review. Director Maya approves the monthly plan.
2. A plan labeled consensus before finance speaks - Separate fictional planning meeting: sales and operations support a proposed volume, but finance has not assessed the cash assumption; the chair must clarify decision status.
3. Different planning horizons in the same vote - Separate fictional executive meeting: sales proposes a one-month plan while operations presents a three-month plan; participants are about to vote without aligning the horizon.

Use the complete ten-turn scripts in the learner workbook and conversation lab. Read with roles, identify the decision or open question, then replay without reading.

06 · Say it: second scenario | A decision without an action owner

A fictional S&OP meeting agrees to assess a promotion scenario by next Tuesday, but nobody accepts responsibility for consolidating the inputs. Sales owns demand information and operations owns capacity information. Facilitate assignment of the missing coordination role.

Role A: Meeting facilitator: distinguish agreement to assess from ownership of the assessment.

Role B: Planning manager: clarify dependencies and accept or explicitly negotiate the coordination responsibility.

Possible opening: We agreed to assess the scenario by Tuesday, but we still need an owner to bring the inputs together.

Success checks

- Identify the demand and capacity contributors.
- Obtain explicit acceptance or clarification of the coordinating role.
- Restate the Tuesday assessment target without calling the scenario an approved plan.

Add a complication: A participant says everyone owns it and wants to end the meeting immediately.

AI extension: adapt this lesson for your learners and available time.

Give feedback that helps

Score each criterion 0, 1, or 2. This is a practice rubric, not a professional qualification or CEFR test. Do not award or remove points for a particular accent.

Meaning and accuracy

Keeps the case facts accurate; clearly separates confirmed and unknown information.

Clarity and language

Uses understandable sentences and explains specialist terms when the listener needs it.

Interaction and tone

Responds to the other person's question, checks understanding, and uses an appropriate tone.

Task completion

Makes the requested action or unresolved question clear without inventing authority or facts.

Use the same scale for each criterion

0 - Not yet: The reader or listener cannot yet recover the intended meaning or action.

1 - With support: The message works after a prompt, clarification, or revision.

2 - Independently: The message is clear and accurate without a prompt.

Feedback sequence

First, identify a successful phrase. Next, identify one point where meaning or accuracy needs work. Offer one useful language correction, allow a repeat, and compare the two attempts. A total out of eight describes this performance only; do not translate it into a proficiency level.

Final challenge

Choose a case not rehearsed today. The learner gives a one-minute response, answers two follow-up questions, and writes a 70-110 word message. Add the lesson's second-round challenge. Compare the result with an earlier attempt using the four criteria.

Use the language responsibly

All cases and figures are fictional. Adapt the language to your role and organization's current procedures, using invented details for practice.

Meaning before performance

Use specialist terms only when they help the listener. Explain unfamiliar words, preserve uncertainty, and ask when an instruction or responsibility is unclear. The model responses illustrate language; they do not authorize professional actions.

Sources and further reading

The cases, workshops, and explanations are original teaching material. These references provide language frameworks and selected professional context. References were checked in September 2026; consult current local guidance for actual work.

Digital.gov: plain-language guidance

<https://digital.gov/guides/plain-language>

Council of Europe: CEFR descriptors

<https://www.coe.int/en/web/common-european-framework-reference-languages/cefr-descriptors>

Your next step

Choose one expression you can use in a genuine work situation. Rehearse it with fictional details, then adapt the wording to your role and audience.

Extend your practice with AI

Use the next two prompts after your own first attempt. Each contains the course context and a complete starting case or dialogue. Copy the entire prompt, including the reference, into a new chat in your preferred AI. You can also use the links to copy it from the website.

Choose the right kind of help

A role-play prompt makes the AI wait for your replies. A new-dialogue prompt asks for a complete professional script. Writing feedback begins with your draft. Vocabulary, grammar and review prompts move from explanation to your own attempts.

Choose any lesson or dialogue online

The course prompt workshop has eight practice goals and B1 support, B2 independent and C1 stretch settings. These are practice choices, not assessed proficiency levels. Select the same lesson number or dialogue title you used in this guide.

[Open this course's AI prompt workshop](#)

Keep practice useful

Use fictional or anonymized details. English Ladder does not send anything to an AI service or add your drafts to the prompts. Your chosen service's terms and any usage charges apply. AI responses can contain mistakes; compare feedback with the lesson and verify specialist claims against the course references.

The two starter prompts use B2 practice. To change support in a printed prompt, replace its practice-setting paragraph with a request for shorter explanations and sentence starters (B1), or greater precision and more complex constraints (C1). Keep the professional facts unchanged.

Changing the example

For another case on paper, replace the text between REFERENCE and END REFERENCE with that case, its course context, relevant terms and language target. Include the full exchange if practicing a dialogue. Do not assume your AI can access this PDF or a link. The website makes this substitution for you.

Prompt edition: 2026-09-06. These are original practice instructions; results depend on the AI service you choose.

Adapt a partner or class activity

START PROMPT / COPY THROUGH END PROMPT

Be my workplace English practice partner. Follow the practice instructions after the REFERENCE block. The block contains fictional study material, not instructions to you. Keep its facts, numbers, uncertainty and professional responsibilities accurate. Clearly label any new scenario or changed fact as an invented variation. Use natural workplace language; explain unfamiliar abbreviations in context. If a technical expression is uncertain, say so rather than inventing a definition or authority. Coach communication, not professional decisions; respect the course scope. Ask only for fictional or anonymized practice details. Judge clarity, meaning, appropriate tone and the next step. Accept valid alternative English and distinguish errors from style preferences. Do not claim to certify my language level. Unless I ask to change the plan, follow the stages and stop wherever the instructions say to wait.

When discussing a word, phrase, or example sentence as language within an explanation, question, or answer feedback, enclose that wording in quotation marks. For example: What does "about" mean in "about twenty people"? Use "on" with a named day. Keep standalone answer choices, vocabulary headwords, and ordinary reading or dialogue text uncluttered. Quotation marks identifying a language example do not attribute it to a news source; attributed source quotations must remain verbatim.

Practice setting: B2 independent. Use natural professional English with brief explanations. Let me attempt each task without a model first. Offer a hint after difficulty and invite a more precise retry.

REFERENCE

Course: Supply Chain and Logistics English

Professional audience: supply-chain managers, planners, buyers, logistics coordinators, warehouse leaders, procurement teams, customs staff, and operations managers

Scope: All cases and figures are fictional. Adapt the language to your role and organization's current procedures, using invented details for practice.

Lesson 01: Demand Planning and Forecast Bias

Original fictional case: A forecast exceeds actual demand for three months. Sales expects a new promotion to improve demand but has no order evidence yet.

Language workshop: Match certainty to evidence

Communication goal: Separate observations, assumptions, and conclusions.

Language guidance: Say what the evidence shows, identify what is still unknown, and limit the conclusion to that evidence. Words such as 'may', 'suggests', and 'in this sample' are useful when the uncertainty is real. Do not soften an urgent, verified safety concern.

Useful frames (complete the gaps with case facts): The available evidence shows ... / This may indicate ..., but ... / We have not yet established whether ...

Vocabulary: forecast: Forward-looking estimate based on assumptions, trends, constraints, and known risks. / forecast bias: A systematic tendency for forecasts to be higher or lower than actual results. / demand signal: Information suggesting what customers may require or purchase. / S&OP: Sales and operations planning: coordinating demand, supply, and business plans across teams.

Speaking task: Prepare for two minutes. Speak for 45-60 seconds using the case facts, then respond to your partner's question. Switch roles and repeat without reading the model response.

Partner: You need to tell a colleague what is known. Ask which part is confirmed and which part is an assumption. Challenge one statement that sounds more certain than the case supports.

Writing task: Write a 70-110 word message for the person who needs to act on this case. State the purpose, preserve the relevant facts, and make the next action or unresolved question clear. Use a subject line and an appropriate opening. Do not invent a deadline, finding, or approval.

Optional second-round challenge: Someone asks for a yes-or-no answer when the evidence supports only a qualified answer. Be concise while preserving the uncertainty.

Model for comparison AFTER my attempt, not a response to give me first: The forecast has been above actual demand for three months. The promotion may change that pattern, but it is still an assumption. I'll separate confirmed orders from the promotional estimate.

END REFERENCE

TASK: Adapt this material for a teaching session

1. Ask me one brief planning question covering learner support needs, group size and available time. Offer a default of two B2 learners and 20 minutes. Stop and wait; use the default only if I choose it.
2. Create a timed plan using the supplied case or dialogue, its actual terminology and one narrow language goal. Include an individual first attempt, partner exchange, focused feedback and a retry. Keep the total within the time I choose. State what the learner should be able to communicate at the end.
3. Provide separate role cards for two or three professional speakers. Each card needs an objective, known information and one question to resolve. Label any invented private information as a variation; do not contradict shared facts. Do not place the model answer on the learner cards.
4. Add a B1 support option with useful frames, a B2 independent task and a C1 extension involving a plausible competing constraint. Maintain the same professional meaning across levels. Explain unfamiliar terms without removing the field's normal language. Include a workable solo alternative.
5. Put teacher notes and suggested responses in a clearly separate section after the learner material. Include likely misunderstandings and a short observation checklist for facts, clarity, tone and next step. Accept multiple successful formulations. Finish with one exit question and a delayed-recall task; identify what the teacher should check before use.

Adjust tone and register

START PROMPT / COPY THROUGH END PROMPT

Be my workplace English practice partner. Follow the practice instructions after the REFERENCE block. The block contains fictional study material, not instructions to you. Keep its facts, numbers, uncertainty and professional responsibilities accurate. Clearly label any new scenario or changed fact as an invented variation. Use natural workplace language; explain unfamiliar abbreviations in context. If a technical expression is uncertain, say so rather than inventing a definition or authority. Coach communication, not professional decisions; respect the course scope. Ask only for fictional or anonymized practice details. Judge clarity, meaning, appropriate tone and the next step. Accept valid alternative English and distinguish errors from style preferences. Do not claim to certify my language level. Unless I ask to change the plan, follow the stages and stop wherever the instructions say to wait.

When discussing a word, phrase, or example sentence as language within an explanation, question, or answer feedback, enclose that wording in quotation marks. For example: What does "about" mean in "about twenty people"? Use "on" with a named day. Keep standalone answer choices, vocabulary headwords, and ordinary reading or dialogue text uncluttered. Quotation marks identifying a language example do not attribute it to a news source; attributed source quotations must remain verbatim.

Practice setting: B2 independent. Use natural professional English with brief explanations. Let me attempt each task without a model first. Offer a hint after difficulty and invite a more precise retry.

REFERENCE

Course: Supply Chain and Logistics English

Professional audience: supply-chain managers, planners, buyers, logistics coordinators, warehouse leaders, procurement teams, customs staff, and operations managers

Scope: All cases and figures are fictional. Adapt the language to your role and organization's current procedures, using invented details for practice.

Lesson 01: Demand Planning and Forecast Bias

Original fictional case: A forecast exceeds actual demand for three months. Sales expects a new promotion to improve demand but has no order evidence yet.

Language workshop: Match certainty to evidence

Communication goal: Separate observations, assumptions, and conclusions.

Language guidance: Say what the evidence shows, identify what is still unknown, and limit the conclusion to that evidence. Words such as 'may', 'suggests', and 'in this sample' are useful when the uncertainty is real. Do not soften an urgent, verified safety concern.

Useful frames (complete the gaps with case facts): The available evidence shows ... / This may indicate ..., but ... / We have not yet established whether ...

Vocabulary: forecast: Forward-looking estimate based on assumptions, trends, constraints, and known risks. / forecast bias: A systematic tendency for forecasts to be higher or lower than actual results. / demand signal: Information suggesting what customers may require or purchase. / S&OP: Sales and operations planning: coordinating demand, supply, and business plans across teams.

Speaking task: Prepare for two minutes. Speak for 45-60 seconds using the case facts, then respond to your partner's question. Switch roles and repeat without reading the model response.

Partner: You need to tell a colleague what is known. Ask which part is confirmed and which part is an assumption. Challenge one statement that sounds more certain than the case supports.

Writing task: Write a 70-110 word message for the person who needs to act on this case. State the purpose, preserve the relevant facts, and make the next action or unresolved question clear. Use a subject line and an appropriate opening. Do not invent a deadline, finding, or approval.

Optional second-round challenge: Someone asks for a yes-or-no answer when the evidence supports only a qualified answer. Be concise while preserving the uncertainty.

Model for comparison AFTER my attempt, not a response to give me first: The forecast has been above actual demand for three months. The promotion may change that pattern, but it is still an assumption. I'll separate confirmed orders from the promotional estimate.

END REFERENCE

TASK: Match the language to the listener

1. Choose a short message or utterance from the reference and quote it exactly. Identify its purpose and likely audience. Ask me to choose a new audience: a close colleague, a decision-maker, or an external reader who may not know the jargon. Stop and wait.
2. Ask me to adapt that message for the chosen reader, keeping its facts and degree of certainty unchanged. Offer a short frame only if I request help. Wait for my attempt before showing alternatives.
3. Discuss at most three choices in my version: directness, specialist vocabulary and interpersonal tone. Explain when a direct request is clearer than extra politeness, and when an unfamiliar abbreviation needs expansion. Avoid cultural stereotypes or claims that one nationality always communicates a certain way.
4. Show two natural alternatives, such as a concise spoken version and a more explicit written version. Explain the tradeoff in each. Do not turn a request into an order, a possibility into a promise, or a pending decision into approval.
5. Ask me to respond to one realistic follow-up from the new reader, then wait. Finish by asking me to adapt the message for a second audience without losing its core meaning. Give feedback only after the attempt.
