

ENGLISH FOR WORK / SEPTEMBER 2026

# Cybersecurity English

## Conversation lab

8 complete workplace dialogues, followed by eight additional role-play cases. Study the exchanges, then make the conversation your own.

### PRACTICE THAT TRANSFERS TO WORK

Read a realistic case. Find the right language. Speak, write, get feedback, and try again.

Eight lessons | Intermediate to advanced | Independent or classroom study

For security analysts, SOC staff, incident responders, security engineers, GRC specialists, identity teams, vulnerability managers, and security leaders.

All cases and figures are fictional. Adapt the language to your role and organization's current procedures, using invented details for practice.

All scenarios, figures, and model responses are fictional teaching material. Use invented details in practice.

[Open this course on English Ladder](#)

# Inside this conversation lab

Original fictional training conversations in professional English. These are realistic scripts, not transcripts of actual people. The professional roles are the speaker labels; all figures, incidents, and organizations are invented.

01 Incident triage

02 Vulnerability priority

03 Privileged access review

04 Threat-model workshop

05 A risk exception

06 Audit evidence

07 Executive incident update

08 Vendor security review

Then try eight independent role-play cases, followed by feedback criteria and references.

# Read it. Hear it. Make it yours.

1. Read the setting. Identify the roles, the immediate problem, and what each speaker needs.
2. Read the whole conversation aloud with a partner. In a group, give a third person the observer role. For three-speaker scripts, assign each professional a separate voice.
3. Notice how the speakers ask a specific question, qualify a claim, disagree, explain a technical point, or agree on a next step. Underline language you would actually use.
4. Cover the script. Recreate the exchange using the situation and professional roles. Keep the meaning, but change the wording.
5. Switch roles and introduce a complication: a missing record, a different priority, an unavailable colleague, or a changed assumption. End with a clear outcome or unresolved question.

## Register and terminology

These colleagues use concise professional language. In an internal technical meeting, familiar abbreviations can be natural. With a new colleague or a client, expand unfamiliar terms and check understanding. Keep disagreement directed at the evidence or proposal, and match the degree of certainty to what is known.

## Independent study

Speak each role aloud. Pause before the reply and supply your own response before revealing the next line. Record a second version using invented details, then compare its clarity and tone with the script.

## Professional context

All cases and figures are fictional. Adapt the language to your role and organization's current procedures, using invented details for practice.

**FULL DIALOGUE 01 / 6 SPEAKING TURNS**

# Incident triage

Security reviews an unusual sign-in alert.

Roles: SOC analyst / Incident lead

**SOC analyst:** The alert shows an unfamiliar location and repeated failed sign-ins. Compromise isn't confirmed.

**Incident lead:** What do the successful sign-ins and device records show?

**SOC analyst:** One success from an unmanaged device. I'm preserving the logs under our incident process.

**Incident lead:** Correlate the activity and follow the approved containment and escalation playbook.

**SOC analyst:** I'll document the evidence, uncertainty, and affected account without sharing credentials.

**Incident lead:** I'll assign incident coordination and confirm when stakeholders should receive the next factual update.

## Notice the professional language

Discuss this wording: "What do the successful sign-ins and device records show?" What does it help the other professional clarify?

## Rehearse and extend with AI

Explain the issue and the agreed next step without reading. Identify any point still awaiting evidence, agreement, or approval. Then replay the exchange with a changed constraint and a new ending.

Observer: note one natural professional expression and one place where the follow-up made the meaning clearer.

## FULL DIALOGUE 02 / 6 SPEAKING TURNS

# Vulnerability priority

Security and operations review a critical-severity finding.

Roles: Vulnerability analyst / Service owner

**Vulnerability analyst:** The scanner rated this critical. Is the affected service externally reachable?

**Service owner:** The asset inventory says internal, but the exposure mapping needs confirmation.

**Vulnerability analyst:** Severity is one input. We also need exploitability, business impact, and compensating controls.

**Service owner:** I'll verify the actual deployment and patch compatibility with the platform team.

**Vulnerability analyst:** I'll check the advisory and our approved remediation requirements.

**Service owner:** Then we'll agree on an owner and schedule, escalating any exception through the risk process.

## Notice the professional language

Discuss this wording: "The scanner rated this critical. Is the affected service externally reachable?" What does it help the other professional clarify?

## Rehearse and extend with AI

Explain the issue and the agreed next step without reading. Identify any point still awaiting evidence, agreement, or approval. Then replay the exchange with a changed constraint and a new ending.

Observer: note one natural professional expression and one place where the follow-up made the meaning clearer.

## FULL DIALOGUE 03 / 6 SPEAKING TURNS

# Privileged access review

An application team requests permanent administrator access.

Roles: Application lead / Identity engineer

**Application lead:** Our support team wants standing administrator rights to reduce ticket delays.

**Identity engineer:** Which tasks require elevated privileges, and how often?

**Application lead:** Mostly configuration changes during escalations. Routine support doesn't need them.

**Identity engineer:** Then let's assess time-limited access with approval and logging for those specific tasks.

**Application lead:** That could work if the request process fits our support hours.

**Identity engineer:** I'll map the workflow with you and test it before we propose a controlled access change.

## Notice the professional language

Discuss this wording: "Which tasks require elevated privileges, and how often?" What does it help the other professional clarify?

## Rehearse and extend with AI

Explain the issue and the agreed next step without reading. Identify any point still awaiting evidence, agreement, or approval. Then replay the exchange with a changed constraint and a new ending.

Observer: note one natural professional expression and one place where the follow-up made the meaning clearer.

## FULL DIALOGUE 04 / 6 SPEAKING TURNS

# Threat-model workshop

A team reviews a new external integration.

Roles: Security architect / Software engineer

**Security architect:** Where does untrusted input cross into the service, and what authority does that request carry?

**Software engineer:** At the partner endpoint. The service then calls our account system with its own identity.

**Security architect:** That trust boundary deserves attention. How do we restrict what the partner can request?

**Software engineer:** The design includes scoped operations, but the authorization checks need review.

**Security architect:** Let's document abuse cases and verify controls against them.

**Software engineer:** I'll update the data-flow diagram and link the open security questions to the design review.

## Notice the professional language

trust boundary - A point where data or activity crosses between areas with different trust or access assumptions.

## Rehearse and extend with AI

Explain the issue and the agreed next step without reading. Identify any point still awaiting evidence, agreement, or approval. Then replay the exchange with a changed constraint and a new ending.

Observer: note one natural professional expression and one place where the follow-up made the meaning clearer.

## FULL DIALOGUE 05 / 6 SPEAKING TURNS

## A risk exception

A project asks to delay a required security control.

Roles: Project manager / Security risk lead

**Project manager:** The release date is fixed. Can you approve skipping the control for a month?

**Security risk lead:** I can assess the request, but risk acceptance belongs to the designated authority.

**Project manager:** What should the exception request contain?

**Security risk lead:** Scope, exposure, reason, compensating controls, owner, expiry, and the remediation plan.

**Project manager:** I'll assemble that and identify what changes if approval is refused.

**Security risk lead:** We'll record the decision explicitly. A submitted request doesn't authorize the exception.

### Notice the professional language

risk acceptance - An authorized decision to retain a stated risk under specified conditions.

### Rehearse and extend with AI

Explain the issue and the agreed next step without reading. Identify any point still awaiting evidence, agreement, or approval. Then replay the exchange with a changed constraint and a new ending.

Observer: note one natural professional expression and one place where the follow-up made the meaning clearer.

## FULL DIALOGUE 06 / 6 SPEAKING TURNS

# Audit evidence

A control owner prepares access-review evidence.

Roles: Control owner / Security auditor

**Control owner:** Here's a screenshot showing the review dashboard is green.

**Security auditor:** I also need evidence of the review period, population, reviewer, decisions, and follow-up.

**Control owner:** The underlying export includes accounts that were disabled after the review.

**Security auditor:** Keep the timing clear. We need to distinguish review results from later remediation.

**Control owner:** I'll provide the approved records through the controlled evidence channel.

**Security auditor:** I'll assess them against the control requirement and identify any remaining evidence gaps.

## Notice the professional language

Discuss this wording: "Here's a screenshot showing the review dashboard is green." What does it help the other professional clarify?

## Rehearse and extend with AI

Explain the issue and the agreed next step without reading. Identify any point still awaiting evidence, agreement, or approval. Then replay the exchange with a changed constraint and a new ending.

Observer: note one natural professional expression and one place where the follow-up made the meaning clearer.

## FULL DIALOGUE 07 / 6 SPEAKING TURNS

# Executive incident update

A security lead briefs an executive during an investigation.

Roles: Security lead / Chief operating officer

**Security lead:** We have confirmed unauthorized account activity. The full scope is still under investigation.

**Chief operating officer:** Does that mean customer data were taken?

**Security lead:** We haven't established that. We're reviewing access and transfer evidence with the response team.

**Chief operating officer:** What decisions do you need from me now?

**Security lead:** Confirm the business contact for continuity coordination; communications and legal are reviewing external obligations.

**Chief operating officer:** I'll assign that contact. Keep the next update clear about confirmed facts, open questions, and operational effects.

## Notice the professional language

Discuss this wording: "Does that mean customer data were taken?" What does it help the other professional clarify?

## Rehearse and extend with AI

Explain the issue and the agreed next step without reading. Identify any point still awaiting evidence, agreement, or approval. Then replay the exchange with a changed constraint and a new ending.

Observer: note one natural professional expression and one place where the follow-up made the meaning clearer.

## FULL DIALOGUE 08 / 6 SPEAKING TURNS

# Vendor security review

Procurement asks whether a vendor's certification is sufficient.

Roles: Procurement manager / Third-party security analyst

**Procurement manager:** The vendor sent a certificate. Can we close the security review?

**Third-party security analyst:** First check its scope, validity, and relevance to the service and data we're purchasing.

**Procurement manager:** They also use subcontractors for support.

**Third-party security analyst:** Then we need the approved information about access, locations, and responsibilities in that arrangement.

**Procurement manager:** I'll ask for the missing evidence through the vendor review process.

**Third-party security analyst:** I'll document remaining risks and required decisions rather than treat one certificate as blanket assurance.

## Notice the professional language

Discuss this wording: "The vendor sent a certificate. Can we close the security review?" What does it help the other professional clarify?

## Rehearse and extend with AI

Explain the issue and the agreed next step without reading. Identify any point still awaiting evidence, agreement, or approval. Then replay the exchange with a changed constraint and a new ending.

Observer: note one natural professional expression and one place where the follow-up made the meaning clearer.

## Eight more situations to make your own

The following cases are open role plays. They give you facts, contrasting roles, useful expressions, and a short model response. Use what you learned from the complete dialogues to create a longer exchange.

Preparation: two minutes. Conversation: three to five minutes. Feedback: one minute. Switch roles and repeat with the second-round challenge.

## ROLE-PLAY CASE 01

# Security Triage and Alert Investigation

**SHARED CASE**

A monitoring tool raises an alert about a privileged account. The analyst has not determined whether the activity is authorized.

**Role A | Responding professional**

Separate observations, assumptions, and conclusions. Use only the facts given. Choose two relevant terms and be ready to explain one of them in ordinary words.

**Role B | Listener**

You need to tell a colleague what is known. Ask which part is confirmed and which part is an assumption. Challenge one statement that sounds more certain than the case supports.

**Useful expressions**

The available evidence shows ... .

This may indicate ..., but ... .

We have not yet established whether ... .

**Cover this until after your first attempt**

The alert indicates activity that needs investigation. It does not by itself establish a compromise. I'll record the observed event and the questions needed to determine its significance.

**Second round**

Someone asks for a yes-or-no answer when the evidence supports only a qualified answer. Be concise while preserving the uncertainty.

**Debrief and extend with AI**

Which phrase helped the listener? Which case fact needed clarification? Write one better follow-up question, then repeat the exchange.

## ROLE-PLAY CASE 02

# Incident Response and Containment

**SHARED CASE**

A response team receives a suspected incident. The initial report contains a timestamp and affected service but no confirmed cause.

**Role A | Responding professional**

Give a handoff that the receiving person can confirm. Use only the facts given. Choose two relevant terms and be ready to explain one of them in ordinary words.

**Role B | Listener**

You are taking over the work. Ask what remains open and repeat back the critical status or responsibility. Point out one detail that would be unsafe or misleading to assume.

**Useful expressions**

The current status is ...; the outstanding item is ... .

The record shows ... .

Please confirm who has accepted ... .

**Cover this until after your first attempt**

The report identifies the affected service and timestamp; the cause is unconfirmed. Please acknowledge the handoff and use the response process to coordinate investigation and any containment decision.

**Second round**

The intended recipient cannot take ownership. Keep the status clear and identify the need for an authorized reassignment.

**Debrief and extend with AI**

Which phrase helped the listener? Which case fact needed clarification? Write one better follow-up question, then repeat the exchange.

## ROLE-PLAY CASE 03

# Vulnerability Management

**SHARED CASE**

Two vulnerabilities have similar severity scores, but one affects an exposed service and the other an isolated test system.

**Role A | Responding professional**

Compare options using the same criteria and state the tradeoff. Use only the facts given. Choose two relevant terms and be ready to explain one of them in ordinary words.

**Role B | Listener**

You favor one option but have not checked whether the scope is comparable. Ask about one difference, then explain the tradeoff you are willing to accept.

**Useful expressions**

Both options ..., but ... .

Option A ..., whereas option B ... .

The comparison depends on ... .

**Cover this until after your first attempt**

The scores are similar, but exposure and operational context differ. Let's compare those factors and the available evidence before presenting a remediation priority to the responsible team.

**Second round**

Your listener focuses only on the lowest price or fastest date. Explain one other relevant comparison criterion.

**Debrief and extend with AI**

Which phrase helped the listener? Which case fact needed clarification? Write one better follow-up question, then repeat the exchange.

**ROLE-PLAY CASE 04**

# Identity, Access, and Least Privilege

**SHARED CASE**

A vendor requests a shared privileged account for support. The organization has a controlled access-review process.

**Role A | Responding professional**

Make a request with a clear action, purpose, and realistic timing. Use only the facts given. Choose two relevant terms and be ready to explain one of them in ordinary words.

**Role B | Listener**

You can help but need a clear request and its purpose. Ask what is required and whether the timing is fixed or negotiable.

**Useful expressions**

Could you provide ... so that ...?

Please confirm ... by [agreed time].

If that timing is not possible, please let me know ...

**Cover this until after your first attempt**

Could you specify the tasks, users, and access period required? We'll submit the request through the access-review process so the appropriate scope and accountability can be assessed.

**Second round**

The other person cannot meet the requested timing. Clarify an alternative without inventing authority to change a formal deadline.

**Debrief and extend with AI**

Which phrase helped the listener? Which case fact needed clarification? Write one better follow-up question, then repeat the exchange.

## ROLE-PLAY CASE 05

# Threat Modeling and Secure Design

**SHARED CASE**

A threat-model discussion lists technologies but does not identify the data flows or trust boundaries.

**Role A | Responding professional**

Clarify missing information before responding. Use only the facts given. Choose two relevant terms and be ready to explain one of them in ordinary words.

**Role B | Listener**

You need to know exactly what information is missing. Give one answer only after your partner asks a focused question; then ask them to confirm their understanding.

**Useful expressions**

When you say ..., do you mean ...?

Could you clarify which ...?

So, my understanding is ... . Is that right?

**Cover this until after your first attempt**

Which data crosses each boundary, and who can interact with it? Let's map those flows so the discussion connects possible threats to the actual design.

**Second round**

The other person uses an ambiguous word such as 'ready', 'approved', or 'urgent'. Clarify it before continuing.

**Debrief and extend with AI**

Which phrase helped the listener? Which case fact needed clarification? Write one better follow-up question, then repeat the exchange.

## ROLE-PLAY CASE 06

# Governance, Risk, and Compliance

**SHARED CASE**

An audit action is marked closed because a policy was written. Evidence that the control operates is still missing.

**Role A | Responding professional**

Distinguish completed work from pending work and explain its impact. Use only the facts given. Choose two relevant terms and be ready to explain one of them in ordinary words.

**Role B | Listener**

You need to brief someone who has only one minute. Ask what is complete, what is open, and which open item affects the next action.

**Useful expressions**

We have completed ...; ... remains open.

As of ..., the status is ... .

The next update will cover ... .

**Cover this until after your first attempt**

The policy is complete, but evidence of operation is still outstanding. I'll distinguish the documented design from implementation evidence before we report the action's status.

**Second round**

The listener asks you to reduce the update to two sentences. Preserve the most important completed and pending items.

**Debrief and extend with AI**

Which phrase helped the listener? Which case fact needed clarification? Write one better follow-up question, then repeat the exchange.

## ROLE-PLAY CASE 07

# Security Awareness and Phishing

**SHARED CASE**

A staff member reports a suspicious message and worries about being blamed. The report has not yet been assessed.

**Role A | Responding professional**

Acknowledge a communication problem and give a corrected message. Use only the facts given. Choose two relevant terms and be ready to explain one of them in ordinary words.

**Role B | Listener**

You are frustrated because an earlier message created an expectation. Explain that expectation. Ask your partner to distinguish the correction from anything still uncertain.

**Useful expressions**

My earlier message did not make ... clear.

I'm sorry for ... . The correct information is ... .

Let me check that the revised explanation addresses ... .

**Cover this until after your first attempt**

Thank you for reporting it. Please use the designated channel to share the relevant details. We'll focus on assessing the message and the next steps rather than making assumptions about blame.

**Second round**

The listener remains disappointed after the correction. Acknowledge the impact and restate the available next step calmly.

**Debrief and extend with AI**

Which phrase helped the listener? Which case fact needed clarification? Write one better follow-up question, then repeat the exchange.

## ROLE-PLAY CASE 08

# Executive Risk Briefings

**SHARED CASE**

A budget proposal describes many technical weaknesses but never explains their possible business effects.

**Role A | Responding professional**

Explain a useful distinction in plain English. Use only the facts given. Choose two relevant terms and be ready to explain one of them in ordinary words.

**Role B | Listener**

You are unfamiliar with one technical term in the case. Ask for a plain-English explanation and then paraphrase it. Do not pretend to understand a term you cannot explain.

**Useful expressions**

In this context, ... means ... .

The difference is that ... .

How would you explain that distinction to a colleague?

**Cover this until after your first attempt**

I'll connect each issue to the affected service, plausible consequence, and proposed response. That will help leaders compare the investment request with the risk it is intended to address.

**Second round**

Your listener is new to this field. Replace two specialist expressions with clear explanations without changing the meaning.

**Debrief and extend with AI**

Which phrase helped the listener? Which case fact needed clarification? Write one better follow-up question, then repeat the exchange.

# Give feedback that helps

Score each criterion 0, 1, or 2. This is a practice rubric, not a professional qualification or CEFR test. Do not award or remove points for a particular accent.

## Meaning and accuracy

Keeps the case facts accurate; clearly separates confirmed and unknown information.

## Clarity and language

Uses understandable sentences and explains specialist terms when the listener needs it.

## Interaction and tone

Responds to the other person's question, checks understanding, and uses an appropriate tone.

## Task completion

Makes the requested action or unresolved question clear without inventing authority or facts.

## Use the same scale for each criterion

0 - Not yet: The reader or listener cannot yet recover the intended meaning or action.

1 - With support: The message works after a prompt, clarification, or revision.

2 - Independently: The message is clear and accurate without a prompt.

## Feedback sequence

First, identify a successful phrase. Next, identify one point where meaning or accuracy needs work. Offer one useful language correction, allow a repeat, and compare the two attempts. A total out of eight describes this performance only; do not translate it into a proficiency level.

## Final challenge

Choose a case not rehearsed today. The learner gives a one-minute response, answers two follow-up questions, and writes a 70-110 word message. Add the lesson's second-round challenge. Compare the result with an earlier attempt using the four criteria.

# Use the language responsibly

All cases and figures are fictional. Adapt the language to your role and organization's current procedures, using invented details for practice.

## Meaning before performance

Use specialist terms only when they help the listener. Explain unfamiliar words, preserve uncertainty, and ask when an instruction or responsibility is unclear. The model responses illustrate language; they do not authorize professional actions.

## Sources and further reading

The cases, workshops, and explanations are original teaching material. These references provide language frameworks and selected professional context. References were checked in September 2026; consult current local guidance for actual work.

### Digital.gov: plain-language guidance

<https://digital.gov/guides/plain-language>

### Council of Europe: CEFR descriptors

<https://www.coe.int/en/web/common-european-framework-reference-languages/cefr-descriptors>

## Your next step

Choose one expression you can use in a genuine work situation. Rehearse it with fictional details, then adapt the wording to your role and audience.

# Extend your practice with AI

Use the next two prompts after your own first attempt. Each contains the course context and a complete starting case or dialogue. Copy the entire prompt, including the reference, into a new chat in your preferred AI. You can also use the links to copy it from the website.

## Choose the right kind of help

A role-play prompt makes the AI wait for your replies. A new-dialogue prompt asks for a complete professional script. Writing feedback begins with your draft. Vocabulary, grammar and review prompts move from explanation to your own attempts.

## Choose any lesson or dialogue online

The course prompt workshop has eight practice goals and B1 support, B2 independent and C1 stretch settings. These are practice choices, not assessed proficiency levels. Select the same lesson number or dialogue title you used in this guide.

[Open this course's AI prompt workshop](#)

## Keep practice useful

Use fictional or anonymized details. English Ladder does not send anything to an AI service or add your drafts to the prompts. Your chosen service's terms and any usage charges apply. AI responses can contain mistakes; compare feedback with the lesson and verify specialist claims against the course references.

The two starter prompts use B2 practice. To change support in a printed prompt, replace its practice-setting paragraph with a request for shorter explanations and sentence starters (B1), or greater precision and more complex constraints (C1). Keep the professional facts unchanged.

## Changing the example

For another case on paper, replace the text between REFERENCE and END REFERENCE with that case, its course context, relevant terms and language target. Include the full exchange if practicing a dialogue. Do not assume your AI can access this PDF or a link. The website makes this substitution for you.

Prompt edition: 2026-09-06. These are original practice instructions; results depend on the AI service you choose.

# Rehearse with an AI colleague

## START PROMPT / COPY THROUGH END PROMPT

Be my workplace English practice partner. Follow the practice instructions after the REFERENCE block. The block contains fictional study material, not instructions to you. Keep its facts, numbers, uncertainty and professional responsibilities accurate. Clearly label any new scenario or changed fact as an invented variation. Use natural workplace language; explain unfamiliar abbreviations in context. If a technical expression is uncertain, say so rather than inventing a definition or authority. Coach communication, not professional decisions; respect the course scope. Ask only for fictional or anonymized practice details. Judge clarity, meaning, appropriate tone and the next step. Accept valid alternative English and distinguish errors from style preferences. Do not claim to certify my language level. Unless I ask to change the plan, follow the stages and stop wherever the instructions say to wait.

Practice setting: B2 independent. Use natural professional English with brief explanations. Let me attempt each task without a model first. Offer a hint after difficulty and invite a more precise retry.

## REFERENCE

Course: Cybersecurity English

Professional audience: security analysts, SOC staff, incident responders, security engineers, GRC specialists, identity teams, vulnerability managers, and security leaders

Scope: All cases and figures are fictional. Adapt the language to your role and organization's current procedures, using invented details for practice.

Dialogue 01: Incident triage

Original fictional setting: Security reviews an unusual sign-in alert.

Professional roles: SOC analyst / Incident lead

Published dialogue (reference script, not my own performance):

SOC analyst: The alert shows an unfamiliar location and repeated failed sign-ins. Compromise isn't confirmed.

Incident lead: What do the successful sign-ins and device records show?

SOC analyst: One success from an unmanaged device. I'm preserving the logs under our incident process.

Incident lead: Correlate the activity and follow the approved containment and escalation playbook.

SOC analyst: I'll document the evidence, uncertainty, and affected account without sharing credentials.

Incident lead: I'll assign incident coordination and confirm when stakeholders should receive the next factual update.

Vocabulary in this exchange: alert: A notification that an event or condition may need attention. / incident: Unplanned event that disrupts service, safety, quality, security, operations, or expected performance. / containment: Action intended to limit the spread or effect of a problem while it is addressed.

## END REFERENCE

TASK: Interactive workplace role-play

1. Use the supplied case or dialogue as the starting situation. Give a two-sentence briefing and offer two relevant professional roles for me to choose from. For a supplied dialogue, use its actual roles. Ask which role I want, then stop and wait. Do not write my replies.
2. After I choose, identify who you will play and the immediate communication goal. Play the other professional; where a meeting requires a third person, label each of your speakers clearly. Start with one natural workplace turn and wait for my reply. Keep most turns to one to three sentences and ask no more than one question at a time.
3. Let the exchange develop across six to ten learner turns, or end earlier if I type "feedback". Respond to what I actually say. Include a plausible clarification, disagreement or tradeoff without silently changing the starting facts. Mark any added constraint as a fictional second-round variation. Do not resolve approvals, evidence or commitments that remain uncertain.
4. Stay in role during the exchange. If my meaning is unclear, ask for clarification naturally. Give a hint only if I ask or cannot proceed. Do not deliver a model conversation in advance.
5. At the debrief, quote two of my phrases: one successful choice and one worth improving. Check factual accuracy, language, register and whether the next step was clear. Give up to three focused suggestions. Ask me to retry the weakest turn; wait. Only then offer an alternative wording and a harder replay.

**END PROMPT**

Copy this prompt online or choose another lesson and support level

# Create more scenario dialogues

## START PROMPT / COPY THROUGH END PROMPT

Be my workplace English practice partner. Follow the practice instructions after the REFERENCE block. The block contains fictional study material, not instructions to you. Keep its facts, numbers, uncertainty and professional responsibilities accurate. Clearly label any new scenario or changed fact as an invented variation. Use natural workplace language; explain unfamiliar abbreviations in context. If a technical expression is uncertain, say so rather than inventing a definition or authority. Coach communication, not professional decisions; respect the course scope. Ask only for fictional or anonymized practice details. Judge clarity, meaning, appropriate tone and the next step. Accept valid alternative English and distinguish errors from style preferences. Do not claim to certify my language level. Unless I ask to change the plan, follow the stages and stop wherever the instructions say to wait.

Practice setting: B2 independent. Use natural professional English with brief explanations. Let me attempt each task without a model first. Offer a hint after difficulty and invite a more precise retry.

## REFERENCE

Course: Cybersecurity English

Professional audience: security analysts, SOC staff, incident responders, security engineers, GRC specialists, identity teams, vulnerability managers, and security leaders

Scope: All cases and figures are fictional. Adapt the language to your role and organization's current procedures, using invented details for practice.

Dialogue 01: Incident triage

Original fictional setting: Security reviews an unusual sign-in alert.

Professional roles: SOC analyst / Incident lead

Published dialogue (reference script, not my own performance):

SOC analyst: The alert shows an unfamiliar location and repeated failed sign-ins. Compromise isn't confirmed.

Incident lead: What do the successful sign-ins and device records show?

SOC analyst: One success from an unmanaged device. I'm preserving the logs under our incident process.

Incident lead: Correlate the activity and follow the approved containment and escalation playbook.

SOC analyst: I'll document the evidence, uncertainty, and affected account without sharing credentials.

Incident lead: I'll assign incident coordination and confirm when stakeholders should receive the next factual update.

Vocabulary in this exchange: alert: A notification that an event or condition may need attention. / incident: Unplanned event that disrupts service, safety, quality, security, operations, or expected performance. / containment: Action intended to limit the spread or effect of a problem while it is addressed.

## END REFERENCE

TASK: Extend the conversation library

1. Propose six distinct, common scenarios in this field beyond the supplied case or script. For each, name the setting, two or more professional roles, the communication problem and one useful terminology focus. Include routine coordination, clarification, a complication, disagreement, handoff and follow-up where relevant. Choose scenarios that fit this profession, rather than forcing unsuitable situations into it.
2. Ask me to choose one scenario, or request all six in sequence. Stop and wait. Do not write all the scripts before I choose.
3. For the selected scenario, write an original fictional dialogue of 12-18 substantial speaking turns between two or three professionals. Name each role, establish an actual work problem, and let the exchange progress through questions, clarification, competing constraints and a credible next step or explicitly unresolved issue. Use the occupation's natural nomenclature and register. Avoid an interview between a teacher and a learner, generic small talk, and inserting a glossary definition into every reply. Explain specialist terms outside the dialogue instead.
4. After the script, explain five useful expressions in context, identify two grammar or register choices and ask three questions about the speakers' reasoning. Withhold the answers until I attempt them. Add one role-switch challenge.
5. Before presenting a script, check names, numbers, chronology, roles and terminology for consistency. Label invented facts and acknowledge uncertain specialist usage. If I requested all six, deliver one complete script at a time and wait for "next". Make each scenario materially different.

**END PROMPT**

Copy this prompt online or choose another lesson and support level
