Eight lessons. Eleven extended conversations.

INSIDE THE BOOK

192 vocabulary entries / 128 reusable phrases
220 extended-dialogue turns / 11 transfer exchanges
Word banks and explained answer keys

Upper-intermediate to advanced (B2-C1). For nutritionists, dietitians, nutrition educators, and professionals supporting food-related conversations within their authorized roles.

2026 edition

Eight scenarios. Eight skills.

Eight consultations move from understanding an eating routine to explaining labels, adapting plans, discussing nutrients, clarifying referrals, reviewing supplements, agreeing on a change, and coordinating support.

01 Taking a dietary history without judgment 4

Lunch depends on the break | Use neutral follow-up questions to distinguish eating patterns from assumptions about motivation.

02 Explaining serving sizes and label comparisons 13

The package contains two servings | Explain label arithmetic and distinguish included nutrients from additional amounts.

03 Adapting plans to food access and culture 22

Keep the rice; fix the logistics | Negotiate feasible food options without dismissing cultural preferences or access constraints.

04 Discussing nutrient sources without a one-food solution 31

Plant-based does not describe the whole pattern | Explain nutrient-source terminology while distinguishing dietary preference from a verified deficiency.

05 Clarifying a clinical referral and assessment 40

A flagged result is not a complete explanation | Distinguish a referral question, a reported laboratory flag, and the conclusions an assessment can support.

06 Handling supplement claims and interaction questions 49

Natural is not an interaction check | Explain evidence limits and route product-specific safety questions without endorsing an advertising claim.

07 Agreeing on a small, measurable change 58

One prepared lunch, not a perfect week | Use collaborative language to agree on a bounded action and a meaningful review measure.

08 Coordinating follow-up and practical food support 67

A referral is not a delivered meal | Give a concise nutrition-support handoff that distinguishes requests, eligibility checks, and confirmed arrangements.

Fast-access phrase pages 104

Vocabulary index 106

Sources and publication notes 114

A useful plan starts with an accurate conversation.

Food decisions involve time, money, culture, health, and personal preference. Precise nutrition language should make those constraints easier to discuss, not turn an appointment into a test of willpower.

Ask before interpreting

A skipped meal may reflect a work schedule, cost, symptoms, or preference. Establish the actual circumstances before choosing language such as restriction or nonadherence.

"When you say you missed lunch, was there no break or no food available?"

Separate the label from the person

A serving size is a label reference, not a personalized prescription. Explain the amount actually eaten before comparing nutrient amounts.

"These figures describe one serving; you ate two servings from this package."

Respect familiar food

Ask about ingredients, preparation, access, and meaning. Do not describe an entire cuisine as unhealthy or assume that every family eats the same way.

"Which parts of this meal would you most like to keep?"

Name your professional scope

Nutritionist, dietitian, and related titles do not carry identical qualifications or permissions everywhere. Identify the actual role and refer clinical questions appropriately.

"I can explain this label; the medication interaction needs review by your pharmacist."

PROFESSIONAL BOUNDARIES

All people, organizations, cases, figures, and documents in the exercises are fictional. This is professional English practice, not medical advice, a diet prescription, or clinical certification. Titles, credentials, and permission to provide medical nutrition therapy differ by jurisdiction. Use qualified clinical review for disease treatment, suspected deficiency, allergies, eating disorders, supplement interactions, and urgent symptoms. Do not calculate a dose or infer a diagnosis from these exercises. Protect client information and follow actual local procedures.

Lunch depends on the break

A Read the situation

Use neutral follow-up questions to distinguish eating patterns from assumptions about motivation.

Rina works rotating warehouse shifts. On yesterday's late shift she ate toast before work, had no scheduled meal break, bought noodles after work, and drank two mugs of tea. She cannot recall the mug size. Maya, a nutrition professional, is collecting a dietary history, not diagnosing a deficiency or prescribing a diet. Rina says a typical week is different from yesterday.

PEOPLE / Maya: Nutrition professional | Rina: Client

CURIOSITY BEFORE JUDGMENT

Ask about practical circumstances. Words such as cheats, bad food, and failed imply a judgment that the supplied history does not support.

Briefing checks

Circle one answer in each item. Use the briefing.

1. Which record is being discussed first?

A A laboratory assessment
B Yesterday's intake
C A verified average week
D A prescribed meal plan

2. What explains the missed meal in this account?

A A lack of nutrition knowledge
B No scheduled meal break
C A stated weight-loss target
D A diagnosed food intolerance

3. Which quantity remains uncertain?

A Whether toast was eaten
B The size of each mug
C The number of mugs
D Whether tea was consumed

Answers and explanations: page 85.

The vocabulary that does the work

B Find the words / 1 of 2

Read the definitions and say the common word combinations aloud.

dietary history

Account of usual food and drink intake and relevant circumstances.

IN USE take a dietary history

24-hour recall

Structured account of food and drink consumed during a specified day.

IN USE complete a 24-hour recall

meal pattern

Timing and arrangement of eating occasions.

IN USE describe the meal pattern

shift work

Work scheduled outside or across conventional daytime hours.

IN USE accommodate rotating shift work

eating occasion

Any episode of consuming food or drink.

IN USE identify each eating occasion

portion estimate

Approximate amount actually consumed.

IN USE clarify a portion estimate

household measure

Familiar container or utensil used to describe an amount.

IN USE use a household measure

beverage intake

Drinks consumed during the relevant period.

IN USE record beverage intake

snacking

Eating between the person's main meals.

IN USE ask about snacking

appetite

Desire to eat, distinct from the opportunity to eat.

IN USE describe changes in appetite

satiety

Sense of fullness after eating.

IN USE describe satiety after a meal

meal omission

Absence of a meal from the eating pattern.

IN USE explore a meal omission

Precision check

One recalled day cannot establish the usual pattern. A missing meal does not identify its cause until the client explains the circumstances.

The vocabulary that does the work

B Find the words / 2 of 2

Read the definitions and say the common word combinations aloud.

recall bias

Inaccuracy arising from what someone remembers or reports.

IN USE acknowledge recall bias

usual intake

Eating pattern over time rather than one isolated day.

IN USE distinguish usual intake

weekend variation

Difference between weekday and weekend routines.

IN USE explore weekend variation

preparation method

Way a food is cooked or otherwise prepared.

IN USE clarify the preparation method

food record

Account of foods and drinks recorded over a period.

IN USE review a food record

neutral probe

Nonjudgmental follow-up question that elicits detail.

IN USE use a neutral probe

clarification request

Question that resolves an unclear meaning or instruction.

IN USE make a targeted clarification request

source attribution

Identification of where information came from.

IN USE preserve source attribution

working assumption

Provisional premise used while information is incomplete.

IN USE challenge a working assumption

scope boundary

Limit of the work or authority being discussed.

IN USE state the scope boundary

action owner

Named person responsible for a specified next step.

IN USE confirm the action owner

check-back

Restatement used to verify that a message was understood.

IN USE complete a check-back

Precision check

Keep uncertain quantities approximate. Two mugs is a count, not a verified volume, and no nutrient deficiency follows from this brief account.

Phrases you can actually use

C Notice the language / 1 of 2

OPEN NEUTRALLY

"Could you walk me through what you ate yesterday?"

CLARIFY TIMING

"Was that before your shift or after you got home?"

EXPLORE ACCESS

"What happens when there is no meal break?"

CLARIFY QUANTITY

"Which cup or container did you use?"

ALLOW UNCERTAINTY

"An approximate amount is useful; you do not need to guess an exact number."

CHECK REPRESENTATIVENESS

"How does that compare with a more usual day?"

AVOID JUDGMENT

"I am trying to understand the routine, not grade your choices."

SUMMARIZE ACCURATELY

"The missed meal was linked to the break schedule."

Usually versus yesterday

Usually describes a pattern; yesterday identifies one day. Preserve the distinction when summarizing intake.

No break versus no appetite

One describes access to time; the other describes desire to eat. Neither can replace the other without evidence.

About

About marks a quantity as approximate, preventing a remembered estimate from looking measured.

Phrases you can actually use

C Notice the language / 2 of 2

CLARIFY THE QUESTION

"Are you asking about the finding or the next step?"

INVITE CORRECTION

"Please correct me if I have misunderstood that detail."

ATTRIBUTE INFORMATION

"That is what the current record says; it has not been independently confirmed."

SEPARATE POSSIBILITY

"That is a possibility, not an agreed outcome."

CHECK SCOPE

"That decision sits outside my authority."

PIN DOWN RESPONSIBILITY

"Who is responsible for that specific next step?"

REPAIR MISUNDERSTANDING

"Let me restate the distinction more clearly."

CLOSE AN EXCHANGE

"We agree on the action, the owner, and the point for review."

Reported versus verified

Reported attributes information to a source; verified indicates it has been checked. Do not use the words interchangeably.

Could versus will

Could introduces a possibility. Will commits to an action or predicts an outcome; check whether that certainty is justified.

By versus at

By gives a latest time; at identifies a scheduled moment. State the time zone when people work across locations.

Choose the precise message

D Check your understanding

Circle one best answer for each item. Use the stated purpose and case facts, not the option that merely sounds most polite.

1. Which follow-up best tests whether yesterday was typical?

A So that is your weekly average?
B You must not have felt hungry?
C How does that compare with your other shifts?
D Why do you always skip meals?

2. Which summary preserves the uncertainty?

A Two measured cups
B Exactly half a liter
C No drinks recorded
D Two mugs; volume not recalled

3. Which wording is least judgmental?

A Why did you fail to eat properly?
B Why ignore the plan?
C Why choose a bad routine?
D What made a meal difficult during that shift?

4. Which distinction matters when interpreting this record?

A Intake on one day versus usual intake
B Tea versus any beverage
C Toast versus any food
D Yesterday versus a calendar date

Answers and explanations: page 85.

Lunch depends on the break

E Conversations / turns 1-10

Complete the numbered gaps. Use each bank entry once, without changing its form. Cover the answers at the end until you finish.

WORD + PHRASE BANK

beverage intake / shift work / appetite / usual intake / household measure / neutral probe / meal pattern / 24-hour recall / food record / portion estimate

01 **Maya:** Could you walk me through yesterday, starting with what you had before your shift?

02 **Rina:** Toast and tea. I can manage this [1] _____, but yesterday was not a normal day for me.

03 **Maya:** That is useful to know. We will compare it with other days after we get the sequence clear.

04 **Rina:** My [2] _____ rotates, so breakfast sometimes happens when other people are having dinner.

05 **Maya:** When you said you missed lunch, did you mean you were not hungry or could not take a break?

06 **Rina:** There was no meal break. My [3] _____ was fine; I simply could not leave the floor.

07 **Maya:** Thanks for separating those. What was the next thing you ate, including anything between meals?

08 **Rina:** Noodles after work. My [4] _____ would be one takeout container, although I left some broth.

09 **Maya:** Do you remember how full it was, or would the restaurant's container help us describe it?

10 **Rina:** A container would help. A [5] _____ is easier than trying to guess the weight.

The conversation, continued

E Conversations / turns 11-20

Continue with the word bank on page 10.

11 **Maya:** And drinks across the whole shift, not only the drink that came with your food?

12 **Rina:** Two mugs of tea. That is my remembered [6] _____, but I cannot tell you the mug size.

13 **Maya:** I will leave the volume uncertain. Was there anything small that we have not mentioned?

14 **Rina:** No, not yesterday. My [7] _____ is different when I work mornings.

15 **Maya:** Then we should not turn yesterday into a description of every week. What changes on mornings?

16 **Rina:** I get a proper break. My [8] _____ includes a meal at work, not just food after the shift.

17 **Maya:** That helps. I am understanding the routine rather than deciding whether you made good or bad choices.

18 **Rina:** I appreciate that. A [9] _____ feels easier to answer than asking why I skipped food again.

19 **Maya:** We can review a few different days next time using the record format we agree on.

20 **Rina:** I can bring a [10] _____ from both shift types, without pretending that each amount was measured.

ANSWERS / EXPLANATIONS: PAGE 86

1. 24-hour recall | 2. shift work | 3. appetite | 4. portion estimate | 5. household measure | 6. beverage intake | 7. meal pattern | 8. usual intake | 9. neutral probe | 10. food record

A cup was not a measuring cup

F Say it

A client recorded one cup of soup but meant a large mug, not a measured cup. The exact volume remains unknown; the container can be checked next time.

Complete the four gaps. Use each bank entry once.

WORD + PHRASE BANK

clarification / mug / unknown / container

Professional: "Your word cup referred to a [1] _____."

Client: "The exact volume is still [2] _____."

Professional: "The record needs that [3] _____."

Client: "Next time I can show you the [4] _____."

ANSWERS / EXPLANATIONS: PAGE 86

1. mug | 2. unknown | 3. clarification | 4. container

Rehearse with a fixed script

1. Read the corrected exchange and stress yesterday, usual, and approximate.

2. Change roles and repeat the questions that distinguish appetite from break access.

3. Complete the four-line follow-up with the supplied choices. Check the explanations, then read the corrected exchange twice, changing roles.

WORKING ALONE

Read both roles, pausing for two seconds when the speaker changes. Repeat with the bank covered, then check any missed expressions.

The package contains two servings

A Read the situation

Explain label arithmetic and distinguish included nutrients from additional amounts.

An invented yogurt package contains two servings. Per serving, its label lists 12 grams of total sugars, including 5 grams of added sugars. Jordan eats the whole package. Nutrition educator Lee explains the printed figures without setting a personal sugar target. A second product uses a different serving weight, so a direct per-serving comparison may be misleading.

PEOPLE / Jordan: Client | Lee: Nutrition educator

NUMBERS NEED A REFERENCE AMOUNT

Check whether the listener means one serving or the whole package. Familiar packaging can hide an unfamiliar reference amount.

Briefing checks

Circle one answer in each item. Use the briefing.

1. How many servings did Jordan eat?

A One
B Five
C Twelve
D Two

2. How much added sugar was in the whole package?

A 24 grams
B 34 grams
C 10 grams
D 5 grams

3. Why should the second product's serving weight be checked?

A Added sugar is always extra to total sugar
B The reference amounts differ
C Its color changes the sugar total
D All labels use identical portions

Answers and explanations: page 87.

The vocabulary that does the work

B Find the words / 1 of 2

Read the definitions and say the common word combinations aloud.

Nutrition Facts panel

Standardized nutrition information displayed on a US food label.

IN USE read the Nutrition Facts panel

serving size

Label reference amount used for the listed nutrient figures.

IN USE check the serving size

servings per container

Number of label servings within the package.

IN USE multiply by servings per container

total sugars

All sugars included in the stated label amount.

IN USE compare total sugars

added sugars

Sugars added during processing or preparation under the relevant labeling rules.

IN USE identify added sugars

naturally occurring sugars

Sugars present in the food's ingredients without being added as sweeteners.

IN USE distinguish naturally occurring sugars

percent Daily Value

Label percentage showing contribution to a general daily reference amount.

IN USE interpret percent Daily Value

dual-column label

Panel presenting nutrition information for two stated reference amounts.

IN USE read a dual-column label

reference amount

Quantity against which a label or comparison is expressed.

IN USE align the reference amounts

per-serving value

Nutrient amount for one stated label serving.

IN USE use the per-serving value

per-container value

Nutrient amount for the complete package.

IN USE calculate the per-container value

ingredient list

Ingredients listed under applicable labeling requirements.

IN USE examine the ingredient list

Precision check

The five grams of added sugars are included in the twelve grams of total sugars per serving. Do not add them again. The whole package contains twenty-four grams total, including ten grams added.

The vocabulary that does the work

B Find the words / 2 of 2

Read the definitions and say the common word combinations aloud.

nutrient density

Nutrient content relative to an amount of food or its energy content.

IN USE discuss nutrient density

sodium content

Amount of sodium in the specified quantity.

IN USE compare sodium content

dietary fiber

Food components classified as fiber under applicable definitions.

IN USE identify dietary fiber

saturated fat

Type of fat reported separately in nutrition labeling.

IN USE check saturated fat

label rounding

Permitted rounding of figures displayed on a label.

IN USE allow for label rounding

like-for-like comparison

Comparison using equivalent quantities and definitions.

IN USE make a like-for-like comparison

clarification request

Question that resolves an unclear meaning or instruction.

IN USE make a targeted clarification request

source attribution

Identification of where information came from.

IN USE preserve source attribution

working assumption

Provisional premise used while information is incomplete.

IN USE challenge a working assumption

scope boundary

Limit of the work or authority being discussed.

IN USE state the scope boundary

action owner

Named person responsible for a specified next step.

IN USE confirm the action owner

check-back

Restatement used to verify that a message was understood.

IN USE complete a check-back

Precision check

A label reference amount is not a personalized eating recommendation. Percent Daily Value is also not the percentage of a person's entire diet supplied by that food.

Phrases you can actually use

C Notice the language / 1 of 2

LOCATE THE REFERENCE

"These figures are for the serving shown here."

SCALE THE AMOUNT

"For the whole package, multiply each per-serving amount by two."

EXPLAIN INCLUSION

"Added sugars are included in total sugars, not added on top."

COMPARE FAIRLY

"Let us put both labels on the same quantity basis."

AVOID PRESCRIPTION

"The label does not set your individual portion."

CLARIFY PERCENTAGE

"This percentage refers to the label's daily reference value."

CHECK THE CONTAINER

"How much of the package did you actually eat?"

CORRECT ARITHMETIC

"The total is twenty-four, not thirty-four grams."

Including

Including marks a subset: added sugars form part of total sugars, not a separate amount to add again.

Per

Per identifies the denominator or reference amount. Per serving and per package can produce different figures.

Twice as much

Twice as much scales an amount by two; it does not mean two grams more.

Phrases you can actually use

C Notice the language / 2 of 2

CLARIFY THE QUESTION

"Are you asking about the finding or the next step?"

INVITE CORRECTION

"Please correct me if I have misunderstood that detail."

ATTRIBUTE INFORMATION

"That is what the current record says; it has not been independently confirmed."

SEPARATE POSSIBILITY

"That is a possibility, not an agreed outcome."

CHECK SCOPE

"That decision sits outside my authority."

PIN DOWN RESPONSIBILITY

"Who is responsible for that specific next step?"

REPAIR MISUNDERSTANDING

"Let me restate the distinction more clearly."

CLOSE AN EXCHANGE

"We agree on the action, the owner, and the point for review."

Reported versus verified

Reported attributes information to a source; verified indicates it has been checked. Do not use the words interchangeably.

Could versus will

Could introduces a possibility. Will commits to an action or predicts an outcome; check whether that certainty is justified.

By versus at

By gives a latest time; at identifies a scheduled moment. State the time zone when people work across locations.

Choose the precise message

D Check your understanding

Circle one best answer for each item. Use the stated purpose and case facts, not the option that merely sounds most polite.

1. Which statement explains the whole package correctly?

A 34 grams total sugars, including 10 grams added
B 12 grams total sugars, including 10 grams added
C 10 grams total sugars, including 24 grams added
D 24 grams total sugars, including 10 grams added

2. What does including signal?

A A second container
B A quantity within the total
C An amount to add to the total
D A recommended personal target

3. Which comparison is most defensible?

A Compare unlike servings without checking weight
B Compare package colors
C Treat each product name as a nutrition score
D Compare equivalent amounts before interpreting the figures

4. Which statement avoids turning the label into a prescription?

A Everyone must eat exactly one serving
B Two servings always prove overeating
C The package decides your daily needs
D This is the label's reference serving, not your individualized portion

Answers and explanations: page 87.

The package contains two servings

E Conversations / turns 1-10

Complete the numbered gaps. Use each bank entry once, without changing its form. Cover the answers at the end until you finish.

WORD + PHRASE BANK

reference amount / serving size / added sugars / per-serving value / servings per container / ingredient list / like-for-like comparison / Percent Daily Value / per-container value / Nutrition Facts panel

01 **Jordan:** I thought the yogurt had twelve grams of sugar, but my colleague says it had thirty-four.

02 **Lee:** Let us check the [1] _____ together before deciding which calculation fits what you ate.

03 **Jordan:** I ate the entire package. The front of it looked like something sold for one person.

04 **Lee:** The [2] _____ entry says two, so the printed per-serving amounts need to be doubled here.

05 **Jordan:** That would make the twelve grams twenty-four. Where does the extra five fit into the calculation?

06 **Lee:** Those are [3] _____. The word including means they are already part of the twelve, not an extra five.

07 **Jordan:** Then the complete package contains ten grams added, inside the twenty-four grams total. Is that right?

08 **Lee:** Exactly. You have kept the [4] _____ separate from the amount listed for one serving.

09 **Jordan:** Does that mean the label is telling me I was supposed to eat only half the package?

10 **Lee:** No. The [5] _____ explains the figures; it does not determine your individual portion or nutritional needs.

The conversation, continued

E Conversations / turns 11-20

Continue with the word bank on page 19.

11 **Jordan:** The other yogurt looks lower in sugar per serving. Could I compare those two printed numbers directly?

12 **Lee:** First check the [6] _____. Its stated serving is a different weight, so the numbers are not yet comparable.

13 **Jordan:** We would need equivalent amounts, not just two columns that happen to use the word serving.

14 **Lee:** Yes, a [7] _____ keeps the quantity consistent before interpreting the difference between products.

15 **Jordan:** What about the percentage beside the number? I assumed that meant a percentage of everything I ate today.

16 **Lee:** [8] _____ uses a general daily reference. It is not a measurement of your actual diet today.

17 **Jordan:** I also noticed an ingredient list. Would that answer a different question from these nutrient amounts?

18 **Lee:** Yes. The [9] _____ tells you what the food contains, while this panel gives the specified nutrient figures.

19 **Jordan:** I understand now: check how much I ate, identify the reference, and avoid adding the included sugars twice.

20 **Lee:** Correct. Keep the [10] _____ attached to its serving whenever you explain the calculation to someone else.

ANSWERS / EXPLANATIONS: PAGE 88

1. Nutrition Facts panel | 2. servings per container | 3. added sugars | 4. per-container value | 5. serving size | 6. reference amount | 7. like-for-like comparison | 8. Percent Daily Value | 9. ingredient list | 10. per-serving value

Three servings in a bottle

F Say it

An invented bottle contains three servings. Each serving lists 4 grams total sugars, including 1 gram added. A client drinks the entire bottle. No personal target is supplied.

Complete the four gaps. Use each bank entry once.

WORD + PHRASE BANK

twelve / target / included / three

Client: "The bottle contains [1] _____ servings."

Educator: "The whole bottle has [2] _____ grams of total sugars."

Client: "Added sugars are [3] _____ in that total."

Educator: "The label does not set a personal [4] _____."

ANSWERS / EXPLANATIONS: PAGE 88

1. three | 2. twelve | 3. included | 4. target

Rehearse with a fixed script

1. Read the corrected exchange, emphasizing per serving, whole package, and including.

2. Swap roles and state the two correct totals without turning the label into a personal target.

3. Complete the four-line follow-up with the supplied choices. Check the explanations, then read the corrected exchange twice, changing roles.

WORKING ALONE

Read both roles, pausing for two seconds when the speaker changes. Repeat with the bank covered, then check any missed expressions.

Keep the rice; fix the logistics

A Read the situation

Negotiate feasible food options without dismissing cultural preferences or access constraints.

Ana shares a kitchen and has one refrigerator shelf. She wants to keep rice and beans in her meals. Her food budget is limited, the nearest shop is a small market, and she has no freezer space. Nutrition professional Sam discusses two feasible shopping options with her. No clinical restriction or individualized nutrient target is supplied.

PEOPLE / Ana: Client | Sam: Nutrition professional

FAMILIAR FOOD IS INFORMATION, NOT AN OBSTACLE

A culturally responsive discussion asks what the meal means and what is available. Do not assume that changing cuisine is the goal.

Briefing checks

Circle one answer in each item. Use the briefing.

1. Which food preference is explicit?

A Keeping rice and beans
B Removing all grains
C Buying only imported produce
D Replacing every familiar meal

2. Which storage option is unavailable?

A Freezer space
B One refrigerator shelf
C A shared kitchen
D Shelf-stable storage in principle

3. What kind of decision is being discussed?

A A prescribed clinical restriction
B A diagnosed deficiency
C A guaranteed health outcome
D Feasible shopping options

Answers and explanations: page 89.

The vocabulary that does the work

B Find the words / 1 of 2

Read the definitions and say the common word combinations aloud.

food access

Practical ability to obtain suitable food.

IN USE assess food access

food insecurity

Limited or uncertain access to adequate food.

IN USE discuss food insecurity sensitively

food budget

Money available for food over a stated period.

IN USE work within a food budget

staple food

Regularly eaten food central to a person's meals.

IN USE retain a familiar staple food

cultural preference

Food choice connected with personal or community traditions.

IN USE respect a cultural preference

shared kitchen

Cooking space used by more than one household or person.

IN USE plan around a shared kitchen

storage capacity

Space and conditions available for keeping food.

IN USE check storage capacity

shelf-stable

Able to be stored unopened without refrigeration under stated conditions.

IN USE choose a shelf-stable option

perishable

Likely to spoil unless stored and used appropriately.

IN USE plan for perishable ingredients

batch cooking

Preparing several portions in one cooking session.

IN USE discuss batch cooking realistically

food waste

Food discarded rather than consumed.

IN USE reduce avoidable food waste

unit price

Cost expressed for a standard quantity.

IN USE compare unit prices

Precision check

A cheaper large package is not necessarily the practical choice when storage is limited. Do not treat a preferred staple as the problem simply because it is unfamiliar to the professional.

The vocabulary that does the work

B Find the words / 2 of 2

Read the definitions and say the common word combinations aloud.

seasonal produce

Fruits or vegetables available in their relevant growing season.

IN USE compare seasonal produce

substitution

Replacement chosen for a particular purpose or constraint.

IN USE agree on a feasible substitution

preparation time

Time needed to make a food ready to eat.

IN USE estimate preparation time

equipment access

Availability of the tools needed for preparation.

IN USE establish equipment access

community food resource

Local service supporting access to food.

IN USE identify a community food resource

acceptability

Whether an option fits the person's preferences and circumstances.

IN USE check meal acceptability

clarification request

Question that resolves an unclear meaning or instruction.

IN USE make a targeted clarification request

source attribution

Identification of where information came from.

IN USE preserve source attribution

working assumption

Provisional premise used while information is incomplete.

IN USE challenge a working assumption

scope boundary

Limit of the work or authority being discussed.

IN USE state the scope boundary

action owner

Named person responsible for a specified next step.

IN USE confirm the action owner

check-back

Restatement used to verify that a message was understood.

IN USE complete a check-back

Precision check

Shelf-stable describes storage under stated conditions, usually before opening; check the actual product instructions. This conversation does not authorize ignoring food-safety guidance.

Phrases you can actually use

C Notice the language / 1 of 2

PRESERVE PREFERENCE

"Which familiar foods would you like to keep?"

ASK ABOUT EQUIPMENT

"What can you actually use in the shared kitchen?"

CHECK STORAGE

"Would there be space to store that after opening?"

COMPARE COSTS

"The unit price is lower, but the upfront cost is higher."

OFFER A CHOICE

"Which of these two options fits your week better?"

RESPECT LIMITS

"A plan that needs a freezer would not fit your situation."

ASK PERMISSION

"Would you like information about local food resources?"

CONFIRM FEASIBILITY

"Let us check cost, storage, and preparation time together."

Would fit

Would fit presents compatibility with the stated circumstances rather than a moral judgment about the choice.

Cheaper per unit

A lower unit price does not imply a lower total purchase cost or less waste.

Prefer versus need

Prefer identifies a choice; need may identify a constraint. Ask which meaning the speaker intends.

Phrases you can actually use

C Notice the language / 2 of 2

CLARIFY THE QUESTION

"Are you asking about the finding or the next step?"

INVITE CORRECTION

"Please correct me if I have misunderstood that detail."

ATTRIBUTE INFORMATION

"That is what the current record says; it has not been independently confirmed."

SEPARATE POSSIBILITY

"That is a possibility, not an agreed outcome."

CHECK SCOPE

"That decision sits outside my authority."

PIN DOWN RESPONSIBILITY

"Who is responsible for that specific next step?"

REPAIR MISUNDERSTANDING

"Let me restate the distinction more clearly."

CLOSE AN EXCHANGE

"We agree on the action, the owner, and the point for review."

Reported versus verified

Reported attributes information to a source; verified indicates it has been checked. Do not use the words interchangeably.

Could versus will

Could introduces a possibility. Will commits to an action or predicts an outcome; check whether that certainty is justified.

By versus at

By gives a latest time; at identifies a scheduled moment. State the time zone when people work across locations.

Choose the precise message

D Check your understanding

Circle one best answer for each item. Use the stated purpose and case facts, not the option that merely sounds most polite.

1. Which suggestion best respects the stated storage limit?

A Buy frozen food in bulk
B Add a second freezer to the plan
C Store every opened item at room temperature
D Compare manageable packages and shelf-stable options

2. Which question checks acceptability?

A Which option would you actually want to eat?
B Which cuisine should you give up?
C Why keep your old habits?
D Why not copy my meals?

3. What does a lower unit price establish?

A Lower cost for the comparison quantity
B Lower total cost in every case
C Adequate storage in every home
D No risk of food waste

4. Which resource offer preserves choice?

A Your preferences must change first
B You cannot manage food independently
C Would you like information about local food support?
D I enrolled you without asking

Answers and explanations: page 89.

Keep the rice; fix the logistics

E Conversations / turns 1-10

Complete the numbered gaps. Use each bank entry once, without changing its form. Cover the answers at the end until you finish.

WORD + PHRASE BANK

food waste / shelf-stable / cultural preference / equipment access / unit price / Batch cooking / acceptability / storage capacity / staple food / community food resource

01 **Ana:** I brought the suggested shopping list, but I cannot store half of it in our shared kitchen.

02 **Sam:** Let us start with your [1] _____ instead of assuming that everyone has a full refrigerator and freezer.

03 **Ana:** One refrigerator shelf, no freezer space, and a cupboard. I also want to keep rice and beans.

04 **Sam:** We can keep that [2] _____ combination in the discussion. Which ingredients do you normally buy at the nearby market?

05 **Ana:** Small bags of rice and canned beans. The bigger packages look cheaper, but the checkout total matters.

06 **Sam:** The [3] _____ may be lower for a large package while the upfront cost is higher.

07 **Ana:** Exactly. I also cannot keep a giant opened container cold just because it was good value.

08 **Sam:** Then [4] _____ options still need a check of what happens after opening. We should use the actual instructions.

09 **Ana:** I can cook twice a week, but the kitchen is busy most evenings and I have only one saucepan.

10 **Sam:** That [5] _____ matters. A plan requiring three pans at once would not fit the routine you described.

The conversation, continued

E Conversations / turns 11-20

Continue with the word bank on page 28.

11 **Ana:** People keep suggesting batch cooking, but they seem to imagine a freezer full of labeled containers.

12 **Sam:** [6] _____ is only useful when preparation and safe storage are feasible. We do not have to build around it.

13 **Ana:** Could we compare smaller packages of fresh vegetables with the canned options at my market?

14 **Sam:** Yes, and check [7] _____ too. Which would you actually enjoy alongside your rice and beans?

15 **Ana:** I would use both, depending on the price. I dislike buying a large bag and throwing most away.

16 **Sam:** Then avoiding [8] _____ belongs in the comparison, alongside the price and what you can store safely.

17 **Ana:** That feels more realistic. I am not trying to change everything I eat or buy special ingredients.

18 **Sam:** Your [9] _____ is part of the plan. We are adapting the logistics, not replacing your familiar meals.

19 **Ana:** I would also like information about local support, as long as asking does not commit me to anything.

20 **Sam:** I can explain a [10] _____ and its actual access arrangements. You can decide whether you would like to follow up.

ANSWERS / EXPLANATIONS: PAGE 90

1. storage capacity | 2. staple food | 3. unit price | 4. shelf-stable | 5. equipment access | 6. Batch cooking | 7. acceptability | 8. food waste | 9. cultural preference | 10. community food resource

A lower unit price is not a lower bill

F Say it

A small package costs $3; a larger package costs $8 and has a lower unit price. The client has $5 available for this purchase and cannot store the larger package safely.

Complete the four gaps. Use each bank entry once.

WORD + PHRASE BANK

storage / five / feasibility / eight

Client: "My available budget is [1] _____ dollars."

Professional: "The larger package costs [2] _____ dollars upfront."

Client: "I also lack safe [3] _____."

Professional: "The lower unit price does not settle [4] _____."

ANSWERS / EXPLANATIONS: PAGE 90

1. five | 2. eight | 3. storage | 4. feasibility

Rehearse with a fixed script

1. Read the corrected exchange and stress the constraints on space, equipment, and cost.

2. Swap roles and repeat the two-choice comparison while preserving the client's preferred staple foods.

3. Complete the four-line follow-up with the supplied choices. Check the explanations, then read the corrected exchange twice, changing roles.

WORKING ALONE

Read both roles, pausing for two seconds when the speaker changes. Repeat with the bank covered, then check any missed expressions.

Plant-based does not describe the whole pattern

A Read the situation

Explain nutrient-source terminology while distinguishing dietary preference from a verified deficiency.

Dev has recently started eating a fully plant-based diet and asks whether every plant-based drink has the same nutrients as dairy milk. Dietitian Noor compares two invented labels: Drink A lists added calcium and vitamin B12; Drink B lists neither. No blood results, symptoms, quantities consumed, or personal requirements are supplied. The conversation concerns sources and labels, not a diagnosis or supplement dose.

PEOPLE / Dev: Client | Noor: Dietitian

A DIETARY LABEL IS NOT A COMPLETE ASSESSMENT

Ask what a person actually eats. Vegan, vegetarian, and plant-based can describe different choices and do not establish adequacy or deficiency by themselves.

Briefing checks

Circle one answer in each item. Use the briefing.

1. Which product lists added calcium and vitamin B12?

A Drink B
B Both products
C Neither product
D Drink A

2. What has not been supplied?

A Dev's stated preference
B The absence of listed B12 in Drink B
C Individual nutrient requirements
D Two label descriptions

3. What can the discussion establish from the labels alone?

A The listed nutrient differences
B A confirmed B12 deficiency
C A safe supplement dose
D Complete dietary adequacy

Answers and explanations: page 91.

The vocabulary that does the work

B Find the words / 1 of 2

Read the definitions and say the common word combinations aloud.

plant-based pattern

Eating pattern centered on plant foods, with the exact exclusions needing clarification.

IN USE clarify a plant-based pattern

vegan diet

Dietary pattern excluding animal-derived foods.

IN USE assess a vegan diet

vegetarian diet

Pattern excluding meat, with other exclusions varying by type.

IN USE clarify a vegetarian diet

macronutrient

Nutrient required in relatively large amounts, such as protein or carbohydrate.

IN USE explain a macronutrient

micronutrient

Vitamin or mineral needed in relatively small amounts.

IN USE identify a micronutrient

protein source

Food contributing protein to the diet.

IN USE vary the protein sources

amino acid

Building block of proteins.

IN USE explain an amino acid

legume

Plant food group including beans, peas, and lentils.

IN USE include familiar legumes

fortification

Addition of nutrients to a food product.

IN USE check for fortification

calcium

Mineral involved in bone structure and other body functions.

IN USE identify a calcium source

vitamin B12

Vitamin needed for normal blood and nervous-system functions.

IN USE identify a reliable vitamin B12 source

iron

Mineral involved in oxygen transport and other functions.

IN USE discuss dietary iron sources

Precision check

Fortified is a product description, not a promise that every nutritional need is met. Neither the dietary label nor the two drink labels establish a deficiency.

The vocabulary that does the work

B Find the words / 2 of 2

Read the definitions and say the common word combinations aloud.

heme iron

Form of dietary iron found in animal tissues.

IN USE distinguish heme iron

non-heme iron

Form of dietary iron found in plant foods and other sources.

IN USE explain non-heme iron

bioavailability

Extent to which an ingested substance is available for use by the body.

IN USE discuss nutrient bioavailability

nutrient adequacy

Whether intake meets relevant nutritional needs.

IN USE assess nutrient adequacy

dietary variety

Range of foods included over time.

IN USE explore dietary variety

enrichment

Addition of specified nutrients, often to restore amounts lost in processing.

IN USE distinguish enrichment from a product claim

clarification request

Question that resolves an unclear meaning or instruction.

IN USE make a targeted clarification request

source attribution

Identification of where information came from.

IN USE preserve source attribution

working assumption

Provisional premise used while information is incomplete.

IN USE challenge a working assumption

scope boundary

Limit of the work or authority being discussed.

IN USE state the scope boundary

action owner

Named person responsible for a specified next step.

IN USE confirm the action owner

check-back

Restatement used to verify that a message was understood.

IN USE complete a check-back

Precision check

Clarify actual foods, quantities, and any appropriate clinical information before interpreting adequacy. This exercise does not provide supplement recommendations or treatment instructions.

Phrases you can actually use

C Notice the language / 1 of 2

CLARIFY THE PATTERN

"What does plant-based mean in your meals?"

COMPARE PRODUCTS

"These drinks have different nutrient profiles despite similar packaging."

EXPLAIN FORTIFICATION

"This product has specified nutrients added to it."

AVOID A LEAP

"That label difference does not diagnose a deficiency."

ASK FOR THE ACTUAL ITEM

"Could we look at the brand and current label you use?"

BROADEN THE ACCOUNT

"Let us look at the whole pattern rather than one food."

EXPLAIN A SOURCE

"A source contributes a nutrient; it does not automatically meet every need."

PRESERVE SCOPE

"Any individualized recommendation needs the appropriate assessment."

Contains versus meets needs

Contains identifies a nutrient in a product; meets needs requires a broader individualized assessment.

Source of

Source of identifies a contribution and should not be expanded into the only source of or a complete solution.

Not listed

Not listed describes the supplied label, not a laboratory test of the person's nutrient status.

Phrases you can actually use

C Notice the language / 2 of 2

CLARIFY THE QUESTION

"Are you asking about the finding or the next step?"

INVITE CORRECTION

"Please correct me if I have misunderstood that detail."

ATTRIBUTE INFORMATION

"That is what the current record says; it has not been independently confirmed."

SEPARATE POSSIBILITY

"That is a possibility, not an agreed outcome."

CHECK SCOPE

"That decision sits outside my authority."

PIN DOWN RESPONSIBILITY

"Who is responsible for that specific next step?"

REPAIR MISUNDERSTANDING

"Let me restate the distinction more clearly."

CLOSE AN EXCHANGE

"We agree on the action, the owner, and the point for review."

Reported versus verified

Reported attributes information to a source; verified indicates it has been checked. Do not use the words interchangeably.

Could versus will

Could introduces a possibility. Will commits to an action or predicts an outcome; check whether that certainty is justified.

By versus at

By gives a latest time; at identifies a scheduled moment. State the time zone when people work across locations.

Choose the precise message

D Check your understanding

Circle one best answer for each item. Use the stated purpose and case facts, not the option that merely sounds most polite.

1. Which explanation is accurate?

A Drink A meets all of Dev's needs
B Drink A lists added B12; Drink B does not
C Both drinks must be nutritionally identical
D Drink B proves Dev has a deficiency

2. Which question clarifies the dietary label?

A Which foods do you include and exclude?
B Why refuse every nutrient?
C You must eat the same meals daily?
D Does vegan mean you need no assessment?

3. What does bioavailability refer to?

A The product's retail price
B The person's willingness to buy it
C Availability of an ingested substance for bodily use
D Availability of a product in a shop

4. Which conclusion needs more information?

A Whether the whole pattern meets Dev's needs
B Which drink lists added B12
C Whether two labels were supplied
D Whether the case gives a blood result

Answers and explanations: page 91.

Plant-based does not describe the whole pattern

E Conversations / turns 1-10

Complete the numbered gaps. Use each bank entry once, without changing its form. Cover the answers at the end until you finish.

WORD + PHRASE BANK

vitamin B12 / vegan diet / protein source / Nutrient adequacy / Bioavailability / legumes / fortification / plant-based pattern / dietary variety / micronutrient

01 **Dev:** I switched to plant-based meals, and I assumed these two drinks would be more or less interchangeable.

02 **Noor:** Before comparing them, could you explain your [1] _____ and which foods you now include or leave out?

03 **Dev:** I no longer eat animal-derived foods. I use beans, lentils, grains, vegetables, and whichever drink is available.

04 **Noor:** That describes a [2] _____. It tells me the exclusions, but not everything about quantities or nutrient sources.

05 **Dev:** I can see calcium on one label. Does that mean it occurs in all drinks made from plants?

06 **Noor:** No. This one lists [3] _____, while the other label does not list those added nutrients.

07 **Dev:** So I should check the actual product, not treat the words plant-based as a complete nutrition statement.

08 **Noor:** Exactly. Drink A lists [4] _____ and calcium; Drink B does not list either in the information we have.

09 **Dev:** Does choosing Drink B yesterday mean I have a deficiency, or is that jumping ahead of the evidence?

10 **Noor:** It is a jump. [5] _____ needs an assessment of the broader pattern and any relevant clinical information.

The conversation, continued

E Conversations / turns 11-20

Continue with the word bank on page 37.

11 **Dev:** People also tell me that only one particular food can supply enough protein. That sounds restrictive.

12 **Noor:** We can identify each [6] _____ you actually eat before treating one food as the answer to every question.

13 **Dev:** Beans and lentils are already familiar to me. I would rather discuss those than an expensive specialty product.

14 **Noor:** Those are [7] _____. Familiar foods are useful starting points when we discuss the variety of your meals.

15 **Dev:** I saw the word bioavailability in an article and thought it meant whether a shop had the product.

16 **Noor:** [8] _____ concerns how a substance becomes available for use by the body, not availability on a shelf.

17 **Dev:** Then two foods can contain a nutrient without every question about that nutrient being identical.

18 **Noor:** Right. We can explain that distinction without turning this label comparison into a claim about your [9] _____ status or prescribing a supplement.

19 **Dev:** I will bring the labels I actually use and a record of my meals to the next appointment.

20 **Noor:** That will help us discuss [10] _____ with real examples rather than assuming that every vegan diet looks the same.

ANSWERS / EXPLANATIONS: PAGE 92

1. plant-based pattern | 2. vegan diet | 3. fortification | 4. vitamin B12 | 5. Nutrient adequacy | 6. protein source | 7. legumes | 8. Bioavailability | 9. micronutrient | 10. dietary variety

The brand changed

F Say it

A client switches from a drink listing added B12 to a new brand whose label does not list B12. No symptoms or test results are supplied.

Complete the four gaps. Use each bank entry once.

WORD + PHRASE BANK

deficiency / pattern / brand / label

Client: "I changed the [1] _____ I buy."

Dietitian: "We need to check its current [2] _____."

Client: "A nutrient difference does not establish a [3] _____."

Dietitian: "We also need the wider dietary [4] _____."

ANSWERS / EXPLANATIONS: PAGE 92

1. brand | 2. label | 3. deficiency | 4. pattern

Rehearse with a fixed script

1. Read the exchange and distinguish contains, source, and meets needs.

2. Swap roles and explain the difference between the two supplied labels without diagnosing a deficiency.

3. Complete the four-line follow-up with the supplied choices. Check the explanations, then read the corrected exchange twice, changing roles.

WORKING ALONE

Read both roles, pausing for two seconds when the speaker changes. Repeat with the bank covered, then check any missed expressions.

A flagged result is not a complete explanation

A Read the situation

Distinguish a referral question, a reported laboratory flag, and the conclusions an assessment can support.

Dr Chen refers Morgan to registered dietitian Ellis for a nutrition assessment after an electronic result is flagged outside its laboratory reference range. The actual test, value, diagnosis, and treatment plan are not supplied. Morgan asks whether the flag proves poor eating caused the result. Ellis requests the authorized referral information and explains the nutrition assessment while leaving medical interpretation to the appropriate clinician.

PEOPLE / Morgan: Client | Ellis: Registered dietitian

A REFERRAL IS A QUESTION TO CLARIFY

Do not present the client as a problem to fix. Explain why information is being collected and which professional answers each question.

Briefing checks

Circle one answer in each item. Use the briefing.

1. What does the supplied result establish?

A A named disease is confirmed
B Food caused the result
C A specific diet is prescribed
D A laboratory flag was reported

2. Who requested the nutrition assessment?

A An anonymous advertiser
B Dr Chen
C Morgan's employer
D A food manufacturer

3. Which question requires appropriate clinical interpretation?

A Who sent the referral
B Whether an assessment was requested
C Whether Morgan has a question
D What the flagged test means medically

Answers and explanations: page 93.

The vocabulary that does the work

B Find the words / 1 of 2

Read the definitions and say the common word combinations aloud.

referral question

Specific issue the referring professional asks another service to address.

IN USE clarify the referral question

nutrition assessment

Systematic collection and interpretation of nutrition-related information.

IN USE complete a nutrition assessment

medical nutrition therapy

Clinical nutrition services for a condition within an appropriately qualified professional's scope.

IN USE explain medical nutrition therapy

laboratory reference range

Comparison interval supplied by a laboratory for a test.

IN USE check the laboratory reference range

abnormal flag

Marker that a reported result falls outside a stated reference or alert criterion.

IN USE clarify an abnormal flag

biochemical data

Laboratory information considered in an assessment.

IN USE review biochemical data

anthropometric data

Body measurements considered with their context and limitations.

IN USE interpret anthropometric data

clinical interpretation

Qualified explanation of findings in the person's clinical context.

IN USE request clinical interpretation

nutrition diagnosis

Nutrition-related problem identified through an appropriate assessment framework.

IN USE distinguish a nutrition diagnosis

medical diagnosis

Identification of a disease or clinical condition by an authorized professional.

IN USE distinguish a medical diagnosis

etiology

Cause or contributing origin of a problem, when established.

IN USE avoid assuming etiology

signs and symptoms

Observed findings and reported experiences relevant to assessment.

IN USE distinguish signs and symptoms

Precision check

A laboratory flag does not establish a dietary cause. Nutrition and medical diagnoses are not interchangeable labels; actual assessment and professional authority matter.

The vocabulary that does the work

B Find the words / 2 of 2

Read the definitions and say the common word combinations aloud.

care coordination

Organization of information and responsibilities across services.

IN USE support care coordination

informed permission

Agreement after the relevant purpose and process have been explained.

IN USE seek informed permission

record access

Authorized ability to view relevant information.

IN USE confirm record access

assessment finding

Result established through the actual assessment process.

IN USE document an assessment finding

clinical context

Relevant health circumstances needed to interpret information.

IN USE preserve clinical context

follow-up question

Unresolved issue requiring a later response or review.

IN USE assign a follow-up question

clarification request

Question that resolves an unclear meaning or instruction.

IN USE make a targeted clarification request

source attribution

Identification of where information came from.

IN USE preserve source attribution

working assumption

Provisional premise used while information is incomplete.

IN USE challenge a working assumption

scope boundary

Limit of the work or authority being discussed.

IN USE state the scope boundary

action owner

Named person responsible for a specified next step.

IN USE confirm the action owner

check-back

Restatement used to verify that a message was understood.

IN USE complete a check-back

Precision check

Do not insert a plausible test, value, or disease to make the case sound complete. The missing information is precisely what the referral discussion must identify.

Phrases you can actually use

C Notice the language / 1 of 2

CLARIFY THE PURPOSE

"What question did the referring clinician ask us to address?"

AVOID BLAME

"The flag does not show that you caused the result through food choices."

IDENTIFY MISSING DATA

"I do not yet have the actual result and its clinical context."

EXPLAIN ASSESSMENT

"We will review relevant intake, history, and available information."

SEPARATE ROLES

"Your clinician needs to explain the medical interpretation."

SEEK PERMISSION

"May I request the relevant information through the authorized route?"

LIMIT CONCLUSIONS

"That conclusion would go beyond the information we have."

ASSIGN FOLLOW-UP

"Let us confirm who will answer the outstanding test question."

Because versus after

After states sequence; because asserts a causal connection. A referral after a result does not establish its cause.

Flagged versus diagnosed

Flagged describes a laboratory marker; diagnosed describes a clinical conclusion requiring appropriate evidence.

Nutrition versus medical

The two modifiers identify different professional meanings and must not be silently dropped.

Phrases you can actually use

C Notice the language / 2 of 2

CLARIFY THE QUESTION

"Are you asking about the finding or the next step?"

INVITE CORRECTION

"Please correct me if I have misunderstood that detail."

ATTRIBUTE INFORMATION

"That is what the current record says; it has not been independently confirmed."

SEPARATE POSSIBILITY

"That is a possibility, not an agreed outcome."

CHECK SCOPE

"That decision sits outside my authority."

PIN DOWN RESPONSIBILITY

"Who is responsible for that specific next step?"

REPAIR MISUNDERSTANDING

"Let me restate the distinction more clearly."

CLOSE AN EXCHANGE

"We agree on the action, the owner, and the point for review."

Reported versus verified

Reported attributes information to a source; verified indicates it has been checked. Do not use the words interchangeably.

Could versus will

Could introduces a possibility. Will commits to an action or predicts an outcome; check whether that certainty is justified.

By versus at

By gives a latest time; at identifies a scheduled moment. State the time zone when people work across locations.

Choose the precise message

D Check your understanding

Circle one best answer for each item. Use the stated purpose and case facts, not the option that merely sounds most polite.

1. Which sentence avoids an unsupported cause?

A You were referred after a flagged result
B Your food caused the result
C The flag proves a nutrient deficiency
D The referral confirms disease

2. What should Ellis request?

A The actual referral question and authorized relevant information
B A guessed test result
C A replacement diagnosis from the exercise
D The employer's opinion about eating

3. Which distinction should remain explicit?

A Nutrition diagnosis and medical diagnosis
B Appointment and calendar
C Clinician and any adult
D Label and packaging color

4. Which reply best addresses Morgan's concern?

A No test can ever relate to nutrition
B We can ignore the referring clinician
C The flag alone does not tell us that food caused it
D Yes, any flag proves poor choices

Answers and explanations: page 93.

A flagged result is not a complete explanation

E Conversations / turns 1-10

Complete the numbered gaps. Use each bank entry once, without changing its form. Cover the answers at the end until you finish.

WORD + PHRASE BANK

clinical interpretation / nutrition assessment / referral question / Etiology / record access / care coordination / abnormal flag / laboratory reference range / nutrition diagnosis / assessment finding

01 **Morgan:** My result was flagged, and the referral came straight afterward. Does that mean I caused it by eating badly?

02 **Ellis:** An [1] _____ does not tell us that. I also do not yet have the actual test or its context.

03 **Morgan:** I only saw a colored mark in the portal. Nobody has explained what the test was measuring.

04 **Ellis:** We need the [2] _____ from the appropriate clinician, rather than guessing from the color of a portal message.

05 **Morgan:** Then what would happen in this appointment, and how is it different from repeating that medical explanation?

06 **Ellis:** A [3] _____ looks at relevant intake, history, and available information within my professional role.

07 **Morgan:** Should I bring every document I have, or is there a particular question you need answered?

08 **Ellis:** First I will clarify the [4] _____ so we know what Dr Chen is asking this service to address.

09 **Morgan:** The portal mentions a reference range. I thought anything outside it automatically named a disease.

10 **Ellis:** A [5] _____ is a comparison interval, not a complete diagnosis. The actual result needs proper clinical context.

The conversation, continued

E Conversations / turns 11-20

Continue with the word bank on page 46.

11 **Morgan:** Could we request the information instead of my trying to remember a number I did not understand?

12 **Ellis:** Yes, through authorized [6] _____ and the appropriate permission process. We should not ask you to invent a missing value.

13 **Morgan:** I have also seen nutrition diagnosis in a form. Is that simply another name for a medical diagnosis?

14 **Ellis:** No. A [7] _____ has a specific nutrition-assessment meaning; the two terms are not interchangeable.

15 **Morgan:** So we should not label the cause before either professional has reviewed the information needed for their role.

16 **Ellis:** Correct. [8] _____ should not be assumed simply because the nutrition appointment followed the flagged result.

17 **Morgan:** I would like one clear route for the unanswered medical question, rather than being passed between services.

18 **Ellis:** That is part of [9] _____. We can confirm which clinician will explain the test and how the response reaches you.

19 **Morgan:** Then today we can clarify the assessment without describing a disease or diet that has not been established.

20 **Ellis:** Exactly. We will document each actual [10] _____ and keep the outstanding questions visible until the right professional answers them.

ANSWERS / EXPLANATIONS: PAGE 94

1. abnormal flag | 2. clinical interpretation | 3. nutrition assessment | 4. referral question | 5. laboratory reference range | 6. record access | 7. nutrition diagnosis | 8. Etiology | 9. care coordination | 10. assessment finding

A referral lacks its question

F Say it

A referral says nutrition review but provides no question or actual test results. The receiving service requests clarification from the referrer through the authorized channel.

Complete the four gaps. Use each bank entry once.

WORD + PHRASE BANK

information / missing / diagnosis / channel

Receiver: "The referral question is [1] _____."

Referrer: "I will provide the relevant test [2] _____."

Receiver: "We will use the authorized [3] _____."

Referrer: "The referral alone is not a confirmed [4] _____."

ANSWERS / EXPLANATIONS: PAGE 94

1. missing | 2. information | 3. channel | 4. diagnosis

Rehearse with a fixed script

1. Read the corrected dialogue and emphasize after rather than because when describing the referral.

2. Swap roles and distinguish the assessment purpose from the unresolved medical interpretation.

3. Complete the four-line follow-up with the supplied choices. Check the explanations, then read the corrected exchange twice, changing roles.

WORKING ALONE

Read both roles, pausing for two seconds when the speaker changes. Repeat with the bank covered, then check any missed expressions.

Natural is not an interaction check

A Read the situation

Explain evidence limits and route product-specific safety questions without endorsing an advertising claim.

Client Alex brings an online advertisement for a supplement blend described as natural and clinically tested. The advertisement does not identify the tested formulation, study population, or outcomes. Alex also takes a prescription medicine, but no medicine name or supplement dose is supplied. Nutrition professional Quinn asks for the actual product information and arranges appropriate pharmacist or prescriber review; no stop, start, or dose instruction is given.

PEOPLE / Alex: Client | Quinn: Nutrition professional

RESPECT THE QUESTION WITHOUT ENDORSING THE CLAIM

A person may have invested money or hope in a product. Acknowledge the question, then examine what the claim actually establishes.

Briefing checks

Circle one answer in each item. Use the briefing.

1. What is missing from the advertisement?

A The phrase clinically tested
B A product category
C Details of the tested formulation and outcomes
D The word natural

2. Why is an interaction review needed?

A All natural products are harmless
B The advertisement guarantees compatibility
C The exercise supplies a safe dose
D Alex also takes a prescription medicine

3. Which instruction is not supplied?

A A request for actual product information
B A need for appropriate review
C A concern about evidence
D A stop or start direction

Answers and explanations: page 95.

The vocabulary that does the work

B Find the words / 1 of 2

Read the definitions and say the common word combinations aloud.

dietary supplement

Product intended to supplement the diet under the relevant regulatory definition.

IN USE discuss a dietary supplement

Supplement Facts panel

US label panel listing specified supplement ingredients and amounts.

IN USE inspect the Supplement Facts panel

active ingredient

Ingredient intended to produce a relevant effect.

IN USE identify an active ingredient

proprietary blend

Mixture marketed under a product-specific blend designation.

IN USE clarify a proprietary blend

formulation

Specific composition and form of a product.

IN USE compare the tested formulation

health claim

Statement connecting a product or substance with a health-related outcome under applicable rules.

IN USE examine a health claim

structure/function claim

Claim about supporting a body structure or function under applicable labeling rules.

IN USE distinguish a structure/function claim

evidence quality

Strength and reliability of the information supporting a conclusion.

IN USE assess evidence quality

study population

People included in a research study.

IN USE identify the study population

outcome measure

Defined result used to evaluate a study or intervention.

IN USE clarify the outcome measure

randomized trial

Study assigning participants to groups through a random process.

IN USE describe a randomized trial

systematic review

Structured synthesis of relevant research using explicit methods.

IN USE consult a systematic review

Precision check

Clinically tested does not state what was tested or whether a meaningful benefit was demonstrated. Natural does not establish safety, and a quality-testing mark does not prove clinical effectiveness.

The vocabulary that does the work

B Find the words / 2 of 2

Read the definitions and say the common word combinations aloud.

interaction

Effect of one substance or treatment on another's action or safety.

IN USE check for an interaction

adverse effect

Unwanted harmful effect associated with a product or intervention.

IN USE report an adverse effect

contraindication

Circumstance making an intervention inappropriate under the relevant clinical assessment.

IN USE verify a contraindication

product variability

Differences in composition or characteristics between products or batches.

IN USE acknowledge product variability

third-party testing

Testing conducted by an organization separate from the manufacturer.

IN USE interpret third-party testing

pharmacist review

Assessment by a pharmacist of relevant medicine or product questions.

IN USE request pharmacist review

clarification request

Question that resolves an unclear meaning or instruction.

IN USE make a targeted clarification request

source attribution

Identification of where information came from.

IN USE preserve source attribution

working assumption

Provisional premise used while information is incomplete.

IN USE challenge a working assumption

scope boundary

Limit of the work or authority being discussed.

IN USE state the scope boundary

action owner

Named person responsible for a specified next step.

IN USE confirm the action owner

check-back

Restatement used to verify that a message was understood.

IN USE complete a check-back

Precision check

The actual product, medicine, and clinical circumstances are needed for interaction review. Do not use the exercise to start, stop, or change a supplement or prescription.

Phrases you can actually use

C Notice the language / 1 of 2

ACKNOWLEDGE INTEREST

"I can see why that claim caught your attention."

ASK FOR SPECIFICS

"Which formulation was tested, and in whom?"

SEPARATE EVIDENCE

"Being studied is not the same as showing a useful benefit."

CLARIFY SAFETY

"Natural does not tell us whether an interaction is possible."

CHECK THE ACTUAL PRODUCT

"Could we review the full label rather than the advertisement alone?"

EXPLAIN CERTIFICATION LIMITS

"A quality check does not establish effectiveness for your situation."

ROUTE THE QUESTION

"The pharmacist or prescriber needs the exact product and medicine details."

AVOID AN INSTRUCTION

"I am not giving a start, stop, or dose direction here."

Tested versus effective

Tested says an investigation occurred; effective requires evidence of the relevant benefit in the relevant context.

May interact

May flags a possibility for review without claiming that an interaction has already been demonstrated in this client.

This formulation

This formulation narrows the statement to the actual product composition, not every item with a similar marketing name.

Phrases you can actually use

C Notice the language / 2 of 2

CLARIFY THE QUESTION

"Are you asking about the finding or the next step?"

INVITE CORRECTION

"Please correct me if I have misunderstood that detail."

ATTRIBUTE INFORMATION

"That is what the current record says; it has not been independently confirmed."

SEPARATE POSSIBILITY

"That is a possibility, not an agreed outcome."

CHECK SCOPE

"That decision sits outside my authority."

PIN DOWN RESPONSIBILITY

"Who is responsible for that specific next step?"

REPAIR MISUNDERSTANDING

"Let me restate the distinction more clearly."

CLOSE AN EXCHANGE

"We agree on the action, the owner, and the point for review."

Reported versus verified

Reported attributes information to a source; verified indicates it has been checked. Do not use the words interchangeably.

Could versus will

Could introduces a possibility. Will commits to an action or predicts an outcome; check whether that certainty is justified.

By versus at

By gives a latest time; at identifies a scheduled moment. State the time zone when people work across locations.

Choose the precise message

D Check your understanding

Circle one best answer for each item. Use the stated purpose and case facts, not the option that merely sounds most polite.

1. Which question best evaluates clinically tested?

A How many followers shared it?
B Does the name sound scientific?
C What formulation, population, and outcome were studied?
D How attractive is the packaging?

2. What does natural establish here?

A No possible interaction
B A safe dose with any medicine
C Proven effectiveness for Alex
D An advertising description, not verified compatibility

3. Which distinction is accurate?

A Quality testing and clinical effectiveness answer different questions
B Any testing proves all advertised benefits
C A seal replaces medicine review
D A blend name identifies every dose

4. Which next step stays within the supplied facts?

A Promise that no interaction exists
B Obtain product details for appropriate pharmacist or prescriber review
C Recommend a guessed dose
D Stop the prescription immediately

Answers and explanations: page 95.

Natural is not an interaction check

E Conversations / turns 1-10

Complete the numbered gaps. Use each bank entry once, without changing its form. Cover the answers at the end until you finish.

WORD + PHRASE BANK

health claim / outcome measure / adverse effect / study population / interaction / Third-party testing / pharmacist review / formulation / Evidence quality / Supplement Facts panel

01 **Alex:** The advertisement says natural and clinically tested. I thought that made the supplement a fairly safe bet.

02 **Quinn:** I can see why it sounded reassuring. Could we look at the full [1] _____ rather than relying on those two phrases?

03 **Alex:** The front says it is a blend, and I cannot tell whether the study used this exact product.

04 **Quinn:** The [2] _____ matters. A study of one ingredient does not automatically test every combination sold under a similar name.

05 **Alex:** The advertisement also does not say who took it. Would that change how we interpret the results?

06 **Quinn:** Yes. The [3] _____ helps us judge whether the evidence is relevant to the person asking the question.

07 **Alex:** It says people felt better, but I cannot find what they measured or what they compared it with.

08 **Quinn:** We need the [4] _____, along with the study design, before treating that phrase as a demonstrated benefit.

09 **Alex:** I take a prescription medicine. The salesperson told me natural ingredients cannot interfere with it.

10 **Quinn:** Natural does not rule out an [5] _____. The actual medicine and product need qualified review together.

The conversation, continued

E Conversations / turns 11-20

Continue with the word bank on page 55.

11 **Alex:** I have not brought the medicine name or the exact amount of supplement. I should not guess those.

12 **Quinn:** Correct. A useful [6] _____ depends on accurate details, not an approximate reconstruction of an unfamiliar label.

13 **Alex:** There is also a testing seal. I assumed that meant the product had been shown to work for everyone.

14 **Quinn:** [7] _____ can address particular quality questions. It is not proof of effectiveness for every person or purpose.

15 **Alex:** So even a well-made product and a persuasive study headline leave several different questions unanswered.

16 **Quinn:** Exactly. [8] _____ depends on the actual research, not how confidently the advertisement presents it.

17 **Alex:** I would rather check properly than ask you to promise a benefit or tell me a dose from this picture.

18 **Quinn:** That is sensible. We should also use the appropriate reporting route for any suspected [9] _____, rather than dismissing it because the product is sold as natural.

19 **Alex:** I will provide the complete product and medicine details for the appropriate professional to review.

20 **Quinn:** Then the [10] _____ can be assessed properly before anyone gives you a personalized recommendation about the product.

ANSWERS / EXPLANATIONS: PAGE 96

1. Supplement Facts panel | 2. formulation | 3. study population | 4. outcome measure | 5. interaction | 6. pharmacist review | 7. Third-party testing | 8. Evidence quality | 9. adverse effect | 10. health claim

A quality seal has a limited meaning

F Say it

A product advertises independent testing for specified quality characteristics. The advertisement provides no clinical outcome study. A client asks whether the seal proves benefit for their condition.

Complete the four gaps. Use each bank entry once.

WORD + PHRASE BANK

guarantee / benefit / quality / supplied

Client: "The seal refers to specified product [1] _____."

Professional: "That is different from clinical [2] _____."

Client: "The outcome study is not [3] _____."

Professional: "We should not turn the seal into a [4] _____."

ANSWERS / EXPLANATIONS: PAGE 96

1. quality | 2. benefit | 3. supplied | 4. guarantee

Rehearse with a fixed script

1. Read the corrected dialogue and stress tested versus effective and natural versus safe.

2. Swap roles and request the missing evidence and product details without giving treatment instructions.

3. Complete the four-line follow-up with the supplied choices. Check the explanations, then read the corrected exchange twice, changing roles.

WORKING ALONE

Read both roles, pausing for two seconds when the speaker changes. Repeat with the bank covered, then check any missed expressions.

One prepared lunch, not a perfect week

A Read the situation

Use collaborative language to agree on a bounded action and a meaningful review measure.

Taylor wants a more predictable lunch routine but has not agreed to a weight target or a calorie prescription. Nutrition professional Jo offers two options: prepare lunch on one chosen workday, or identify one affordable ready-to-eat option near work. Taylor chooses to prepare lunch on Tuesday. They will review whether preparation and the lunch break were feasible, not grade the week as a success or failure.

PEOPLE / Jo: Nutrition professional | Taylor: Client

THE CLIENT CHOOSES THE ACTION

A practical goal is an agreement, not a command disguised as a question. Avoid assuming that uncertainty means lack of motivation.

Briefing checks

Circle one answer in each item. Use the briefing.

1. Which action does Taylor choose?

A Follow a new calorie prescription
B Reach a specified weight by Friday
C Prepare lunch for Tuesday
D Prepare every meal for a month

2. What will the review examine?

A A diagnosis from lunch choice
B Preparation and break feasibility
C Whether the whole week was perfect
D A promised weight change

3. Which target is absent?

A A chosen day
B A lunch action
C A review topic
D A weight target

Answers and explanations: page 97.

The vocabulary that does the work

B Find the words / 1 of 2

Read the definitions and say the common word combinations aloud.

collaborative goal

Action target chosen through a shared discussion.

IN USE agree on a collaborative goal

readiness

Current willingness or preparedness to attempt a change.

IN USE explore readiness without pressure

ambivalence

Mixed feelings about a proposed change.

IN USE acknowledge ambivalence

reflective listening

Restating the meaning heard to check understanding.

IN USE use reflective listening

autonomy

Person's ability to make their own informed choices.

IN USE respect client autonomy

implementation intention

Specific plan connecting an action with a situation or cue.

IN USE form an implementation intention

action plan

Concrete arrangement for carrying out an agreed step.

IN USE confirm the action plan

behavioral goal

Target expressed as an action rather than an assumed outcome.

IN USE define a behavioral goal

outcome goal

Target expressed as a desired result.

IN USE distinguish an outcome goal

confidence rating

Person's stated estimate of confidence in carrying out an action.

IN USE ask for a confidence rating

barrier

Circumstance making an action more difficult.

IN USE identify a practical barrier

facilitator

Circumstance making an action easier.

IN USE identify a facilitator

Precision check

Preparing one lunch is a behavioral goal. It is not a promise of weight change, and missing it does not prove unwillingness. Review the actual barrier before changing the plan.

The vocabulary that does the work

B Find the words / 2 of 2

Read the definitions and say the common word combinations aloud.

contingency plan

Agreed alternative for a specified disruption.

IN USE agree on a contingency plan

self-monitoring

Recording one's own relevant actions or experiences.

IN USE use focused self-monitoring

process measure

Indicator of whether an action or step occurred.

IN USE select a process measure

review point

Agreed occasion for checking progress or fit.

IN USE set a review point

goal revision

Adjustment of an agreed goal after new information.

IN USE discuss goal revision

nonjudgmental feedback

Response describing facts without blame or moral grading.

IN USE give nonjudgmental feedback

clarification request

Question that resolves an unclear meaning or instruction.

IN USE make a targeted clarification request

source attribution

Identification of where information came from.

IN USE preserve source attribution

working assumption

Provisional premise used while information is incomplete.

IN USE challenge a working assumption

scope boundary

Limit of the work or authority being discussed.

IN USE state the scope boundary

action owner

Named person responsible for a specified next step.

IN USE confirm the action owner

check-back

Restatement used to verify that a message was understood.

IN USE complete a check-back

Precision check

Use the supplied choices and facts during practice. A confidence rating helps a conversation; it is not a clinical test or a score of personal worth.

Phrases you can actually use

C Notice the language / 1 of 2

REFLECT THE TENSION

"You want a steadier routine, but evenings are already crowded."

OFFER BOUNDED OPTIONS

"Would preparing once or identifying a nearby option fit better?"

RESPECT CHOICE

"Which option would you prefer to try?"

MAKE IT SPECIFIC

"Which day and which preparation step are you choosing?"

CHECK CONFIDENCE

"How confident do you feel about that particular action?"

PLAN FOR DISRUPTION

"What is the agreed alternative if the shift changes?"

REVIEW NEUTRALLY

"What made the action easier or harder this time?"

SEPARATE OUTCOME

"We are checking whether the action worked, not promising a weight change."

Try versus promise

Try acknowledges an attempt under real constraints; promise can overstate control over the outcome.

On Tuesday

A named day makes the behavioral target specific without expanding it to every day.

What got in the way

This asks about a barrier and does not assume that the person deliberately ignored the agreement.

Phrases you can actually use

C Notice the language / 2 of 2

CLARIFY THE QUESTION

"Are you asking about the finding or the next step?"

INVITE CORRECTION

"Please correct me if I have misunderstood that detail."

ATTRIBUTE INFORMATION

"That is what the current record says; it has not been independently confirmed."

SEPARATE POSSIBILITY

"That is a possibility, not an agreed outcome."

CHECK SCOPE

"That decision sits outside my authority."

PIN DOWN RESPONSIBILITY

"Who is responsible for that specific next step?"

REPAIR MISUNDERSTANDING

"Let me restate the distinction more clearly."

CLOSE AN EXCHANGE

"We agree on the action, the owner, and the point for review."

Reported versus verified

Reported attributes information to a source; verified indicates it has been checked. Do not use the words interchangeably.

Could versus will

Could introduces a possibility. Will commits to an action or predicts an outcome; check whether that certainty is justified.

By versus at

By gives a latest time; at identifies a scheduled moment. State the time zone when people work across locations.

Choose the precise message

D Check your understanding

Circle one best answer for each item. Use the stated purpose and case facts, not the option that merely sounds most polite.

1. Which goal matches the agreement?

A Prepare lunch for Tuesday and review feasibility
B Never miss lunch again
C Lose a stated amount this week
D Follow the professional's entire routine

2. Which question explores a barrier without blame?

A Why did you fail again?
B Why are you unmotivated?
C Why ignore everything we discussed?
D What got in the way of the preparation step?

3. Which is the most relevant process measure?

A Whether every meal was identical
B Whether Taylor pleased Jo
C Whether the lunch was prepared and a break was available
D A guaranteed change in body weight

4. How should mixed feelings be described?

A A confirmed medical diagnosis
B Automatic refusal of all help
C Ambivalence about the proposed change
D Proof of dishonesty

Answers and explanations: page 97.

One prepared lunch, not a perfect week

E Conversations / turns 1-10

Complete the numbered gaps. Use each bank entry once, without changing its form. Cover the answers at the end until you finish.

WORD + PHRASE BANK

goal revision / process measure / collaborative goal / barrier / reflective listening / contingency plan / autonomy / behavioral goal / action plan / ambivalence

01 **Jo:** You want a steadier lunch routine, but you have said that evenings already feel crowded. Have I understood?

02 **Taylor:** Yes. That [1] _____ is closer to what I mean than telling me I need more discipline.

03 **Jo:** We have two options today: prepare lunch once, or identify one affordable ready-to-eat option near work.

04 **Taylor:** I feel some [2] _____. I like preparing food, but a whole week of packed lunches feels too much.

05 **Jo:** We do not have to start with a whole week. Which option would you prefer to try first?

06 **Taylor:** Preparing one lunch. That feels like a [3] _____ I have actually chosen, rather than another rule someone has assigned.

07 **Jo:** Which workday would fit best, and what preparation step would make it possible in your current routine?

08 **Taylor:** Tuesday. My [4] _____ is to prepare it on Monday evening while I am already in the kitchen.

09 **Jo:** That names a clear action and a time. How confident do you feel about that particular step?

10 **Taylor:** More confident than about five lunches. The main [5] _____ would be an unexpected late shift on Monday.

The conversation, continued

E Conversations / turns 11-20

Continue with the word bank on page 64.

11 **Jo:** Then let us keep the alternative visible rather than pretend that your shift can never change.

12 **Taylor:** My [6] _____ can use the nearby option we discussed if that happens, within the actual budget.

13 **Jo:** At the review, we can ask whether preparation worked and whether you had a break to eat.

14 **Taylor:** That [7] _____ makes sense. It tells us something useful about the routine, not just whether I tried hard.

15 **Jo:** Exactly. We have not agreed to a weight target, and this one lunch cannot promise a particular result.

16 **Taylor:** So this is a [8] _____, not a test of whether my body changes by the next appointment.

17 **Jo:** Correct. If the action does not fit, we can look at what happened and adjust the agreement.

18 **Taylor:** A [9] _____ would feel more useful than calling the whole week unsuccessful because Tuesday went differently.

19 **Jo:** We will review the facts together and keep your choice central. You can also say that an option no longer fits.

20 **Taylor:** That [10] _____ makes the small step easier to own. Tuesday lunch is the action I want to try.

07

ANSWERS / EXPLANATIONS: PAGE 98

1. reflective listening | 2. ambivalence | 3. collaborative goal | 4. action plan | 5. barrier | 6. contingency plan | 7. process measure | 8. behavioral goal | 9. goal revision | 10. autonomy

The shift changed

F Say it

Taylor prepared Tuesday lunch, but an unexpected shift change removed the planned break. The next review distinguishes preparation from the opportunity to eat.

Complete the four gaps. Use each bank entry once.

WORD + PHRASE BANK

prepared / process / unavailable / blame

Client: "The lunch was [1] _____."

Professional: "The planned break became [2] _____."

Client: "Those are separate parts of the [3] _____."

Professional: "We can review the barrier without [4] _____."

ANSWERS / EXPLANATIONS: PAGE 98

1. prepared | 2. unavailable | 3. process | 4. blame

Rehearse with a fixed script

1. Read the exchange and identify the chosen action, timing, barrier, and review measure.

2. Swap roles and practice the neutral review question without adding a weight target.

3. Complete the four-line follow-up with the supplied choices. Check the explanations, then read the corrected exchange twice, changing roles.

WORKING ALONE

Read both roles, pausing for two seconds when the speaker changes. Repeat with the bank covered, then check any missed expressions.

A referral is not a delivered meal

A Read the situation

Give a concise nutrition-support handoff that distinguishes requests, eligibility checks, and confirmed arrangements.

Dietitian Amira and community coordinator Ben discuss client Pat, who has consented to a relevant information exchange. Pat reports difficulty shopping while recovering at home. A community meal-service referral has been sent, but eligibility, start date, and delivery have not been confirmed. No diet order or swallowing assessment is supplied. Amira and Ben agree who will check the referral status and contact Pat.

PEOPLE / Amira: Dietitian | Ben: Community coordinator

DISTINGUISH THE ADMINISTRATIVE STEP FROM THE LIVED RESULT

Sent, accepted, scheduled, and delivered are different states. A person can still lack food after a referral has been entered.

Briefing checks

Circle one answer in each item. Use the briefing.

1. What is already complete?

A Establishing a diet order
B Sending the referral
C Confirming eligibility
D Delivering the first meal

2. What concern has Pat reported?

A A diagnosed swallowing problem
B A specific food allergy
C A prescribed texture level
D Difficulty shopping during recovery at home

3. What permission is stated?

A Permission to invent clinical instructions
B Consent to the relevant information exchange
C Consent to public sharing
D Blanket access for every organization

Answers and explanations: page 99.

The vocabulary that does the work

B Find the words / 1 of 2

Read the definitions and say the common word combinations aloud.

discharge nutrition plan

Nutrition-related arrangements communicated when a person leaves a care setting.

IN USE clarify a discharge nutrition plan

community referral

Request for support from a community service.

IN USE track a community referral

eligibility criteria

Conditions a person must meet to access a service.

IN USE confirm eligibility criteria

service capacity

Amount of support a service can currently provide.

IN USE check service capacity

referral acceptance

Confirmation that the receiving service has accepted a request.

IN USE verify referral acceptance

delivery schedule

Agreed timing of deliveries.

IN USE confirm the delivery schedule

waiting list

Record of people awaiting access to a service.

IN USE explain waiting-list status

interim arrangement

Temporary support while a longer-term arrangement is pending.

IN USE confirm an interim arrangement

consent to share

Permission for a defined information exchange under applicable requirements.

IN USE document consent to share

minimum necessary information

Relevant information limited to the purpose and applicable rules.

IN USE share minimum necessary information

diet order

Authorized clinical instruction specifying a dietary requirement.

IN USE verify a diet order

texture modification

Change in food texture under an appropriate assessed plan.

IN USE clarify prescribed texture modification

08

Precision check

Referral sent does not mean service started. Confirm the actual stage and responsible contact without supplying a diet order or swallowing instruction that the case does not contain.

The vocabulary that does the work

B Find the words / 2 of 2

Read the definitions and say the common word combinations aloud.

swallowing assessment

Evaluation of swallowing by appropriately qualified professionals.

IN USE request a swallowing assessment

contact attempt

Effort to reach someone, distinct from successful contact.

IN USE record a contact attempt

confirmed contact

Verified communication with the intended person.

IN USE document confirmed contact

continuity of support

Ongoing availability and coordination of needed assistance.

IN USE maintain continuity of support

service handoff

Transfer of relevant information and responsibilities between services.

IN USE complete a service handoff

closed-loop referral

Referral process that checks receipt, action, and relevant outcome.

IN USE complete a closed-loop referral

clarification request

Question that resolves an unclear meaning or instruction.

IN USE make a targeted clarification request

source attribution

Identification of where information came from.

IN USE preserve source attribution

working assumption

Provisional premise used while information is incomplete.

IN USE challenge a working assumption

scope boundary

Limit of the work or authority being discussed.

IN USE state the scope boundary

action owner

Named person responsible for a specified next step.

IN USE confirm the action owner

check-back

Restatement used to verify that a message was understood.

IN USE complete a check-back

Precision check

If actual food access or health needs require urgent action, follow the real local process. A routine referral status check must not substitute for appropriate immediate support.

Phrases you can actually use

C Notice the language / 1 of 2

STATE THE PRACTICAL CONCERN

"Pat reports difficulty getting to the shops during recovery."

SEPARATE STAGES

"The referral is sent; acceptance and delivery are not confirmed."

LIMIT INFORMATION

"I will share only what is relevant through the authorized route."

AVOID AN INVENTED ORDER

"No verified diet order is included in this handoff."

ASSIGN THE CHECK

"Who will confirm eligibility and the possible start date?"

CHECK CONTACT

"Was that a contact attempt or a completed conversation?"

KEEP SUPPORT VISIBLE

"What is the actual arrangement while the referral is pending?"

CLOSE THE LOOP

"Please confirm the status and who will update Pat."

Sent versus accepted

Sent describes the sender's action; accepted requires confirmation from the receiving service.

Scheduled versus delivered

A planned delivery is not evidence that food reached the person.

Attempted versus reached

An attempted call must not be recorded as a completed conversation with the client.

Phrases you can actually use

C Notice the language / 2 of 2

CLARIFY THE QUESTION

"Are you asking about the finding or the next step?"

INVITE CORRECTION

"Please correct me if I have misunderstood that detail."

ATTRIBUTE INFORMATION

"That is what the current record says; it has not been independently confirmed."

SEPARATE POSSIBILITY

"That is a possibility, not an agreed outcome."

CHECK SCOPE

"That decision sits outside my authority."

PIN DOWN RESPONSIBILITY

"Who is responsible for that specific next step?"

REPAIR MISUNDERSTANDING

"Let me restate the distinction more clearly."

CLOSE AN EXCHANGE

"We agree on the action, the owner, and the point for review."

Reported versus verified

Reported attributes information to a source; verified indicates it has been checked. Do not use the words interchangeably.

Could versus will

Could introduces a possibility. Will commits to an action or predicts an outcome; check whether that certainty is justified.

By versus at

By gives a latest time; at identifies a scheduled moment. State the time zone when people work across locations.

Choose the precise message

D Check your understanding

Circle one best answer for each item. Use the stated purpose and case facts, not the option that merely sounds most polite.

1. Which handoff states the current position accurately?

A Referral sent; eligibility and start date unconfirmed
B Meals have started
C Eligibility is approved
D The first delivery was received

2. Which instruction must not be added?

A The existence of consent
B The pending referral status
C A texture-modified diet order
D Pat's reported shopping difficulty

3. Which question checks a real outcome?

A Was a form opened on screen?
B Was a draft message typed?
C Does the team hope delivery happened?
D Has the service confirmed a start date and informed Pat?

4. Which statement distinguishes contact states?

A No reply means consent
B A sent text proves delivery of food
C A voicemail is an attempt, not confirmed contact
D Leaving a message proves understanding

Answers and explanations: page 99.

A referral is not a delivered meal

E Conversations / turns 1-10

Complete the numbered gaps. Use each bank entry once, without changing its form. Cover the answers at the end until you finish.

WORD + PHRASE BANK

referral acceptance / Service capacity / texture modification / community referral / contact attempt / delivery schedule / closed-loop referral / eligibility criteria / Consent to share / diet order

01 **Amira:** Pat has agreed to this relevant information exchange and reports difficulty shopping while recovering at home.

02 **Ben:** Thank you. Has the [1] _____ been sent, or has the meal service already confirmed an arrangement?

03 **Amira:** It has been sent. I do not have confirmation of eligibility, a start date, or a first delivery.

04 **Ben:** I will check the [2] _____ with the actual service instead of assuming that submission means approval.

05 **Amira:** Please also ask what support they can currently offer. We should not promise something outside their capacity.

06 **Ben:** Agreed. [3] _____ may affect timing even when someone meets the access conditions.

07 **Amira:** Pat needs a clear account of what is pending, not a message that meals have started when they have not.

08 **Ben:** I will distinguish [4] _____ from the later delivery arrangement when I give the update.

09 **Amira:** There is no verified diet order in this handoff. Please do not infer one from the name of my service.

10 **Ben:** Understood. A [5] _____ would need the actual authorized instruction, not a guess based on the referral source.

The conversation, continued

E Conversations / turns 11-20

Continue with the word bank on page 73.

11 **Amira:** The same applies to food texture. This case does not contain a swallowing assessment or related instruction.

12 **Ben:** I will not add [6] _____ to the request unless the appropriate verified information is provided through the real process.

13 **Amira:** We should keep the information exchange limited to what the service needs for this purpose.

14 **Ben:** Yes. [7] _____ does not mean unrestricted sharing of every record with every organization.

15 **Amira:** When you contact Pat, please distinguish leaving a message from actually speaking with the client.

16 **Ben:** I will record a [8] _____ separately if there is no answer, and follow the appropriate process for the unresolved need.

17 **Amira:** Who will confirm the start date and check what the actual arrangement is while the referral is pending?

18 **Ben:** I will own that check and report the [9] _____ only when the service confirms it. Any immediate need follows the real support pathway.

19 **Amira:** Then the next update should tell us the status, what Pat has been told, and what remains outstanding.

20 **Ben:** That will make this a [10] _____ rather than an administrative task that ends as soon as a form is submitted.

ANSWERS / EXPLANATIONS: PAGE 100

1. community referral | 2. eligibility criteria | 3. Service capacity | 4. referral acceptance | 5. diet order | 6. texture modification | 7. Consent to share | 8. contact attempt | 9. delivery schedule | 10. closed-loop referral

The service accepted, but the client has not been reached

F Say it

The meal service accepts a referral and proposes Thursday as a start date. The coordinator leaves a voicemail for the client but has not spoken with them. No delivery has occurred.

Complete the four gaps. Use each bank entry once.

WORD + PHRASE BANK

proposed / occurred / attempt / accepted

Coordinator: "The referral is now [1] _____."

Colleague: "Thursday is the [2] _____ start date."

Coordinator: "The voicemail was a contact [3] _____."

Colleague: "A delivery has not yet [4] _____."

ANSWERS / EXPLANATIONS: PAGE 100

1. accepted | 2. proposed | 3. attempt | 4. occurred

Rehearse with a fixed script

1. Read the corrected handoff and distinguish sent, accepted, scheduled, and delivered.

2. Swap roles and repeat the ownership and contact statements without adding clinical diet instructions.

3. Complete the four-line follow-up with the supplied choices. Check the explanations, then read the corrected exchange twice, changing roles.

WORKING ALONE

Read both roles, pausing for two seconds when the speaker changes. Repeat with the bank covered, then check any missed expressions.

Checking a food-allergy message before a group event

E More workplace conversations / 1-10

Distinguish a reported allergy from a preference and avoid unsupported assurances about shared preparation.

Nutrition educator Hana helps event coordinator Eli clarify a participant's reported food allergy. The actual allergen and clinical severity are not supplied. The venue has not confirmed its ingredients or preparation arrangements. They agree to seek the appropriate information and use the real allergy-safety process rather than promise a dish is safe.

PEOPLE / Hana: Nutrition educator | Eli: Event coordinator

Use each bank entry once, without changing its form. Answers follow turn 20.

WORD + PHRASE BANK

reported allergy / preparation controls / verified arrangement / Purpose-limited sharing / ingredient verification / allergen cross-contact

01 **Eli:** A participant reported a food allergy, and the registration form reduced it to a general meal preference.

02 **Hana:** We need to preserve that distinction and follow the venue's actual allergy-safety process, not treat the two labels as interchangeable.

03 **Eli:** I do not have the exact allergen in this note. I should not guess from the dish they asked about.

04 **Hana:** Correct. A [1] _____ must remain accurately attributed while the relevant information is clarified through the appropriate route.

05 **Eli:** The kitchen said it could remove a garnish. Would that be enough to tell the participant the dish is safe?

06 **Hana:** Not on these facts. We do not have verified ingredients or information about [2] _____ during actual preparation and service.

07 **Eli:** So removing something visible does not establish what happened before the plate reached the table.

08 **Hana:** Exactly. We need the responsible food-service team to explain the actual arrangements, not an assurance invented by the event office.

09 **Eli:** I will request the current recipe and product information rather than last year's sample menu.

10 **Hana:** An [3] _____ needs current details, including any substitutions the kitchen actually plans to use.

The conversation, continued

E More workplace conversations / 11-20

Continue with the word bank on page 76.

11 **Eli:** We should also avoid promising that separate utensils are used when nobody has confirmed the preparation process.

12 **Hana:** Yes. A specific claim about [4] _____ needs verification from the people responsible for those controls.

13 **Eli:** If the kitchen cannot provide the assurance the participant needs, we should say that plainly.

14 **Hana:** And use the actual safety and access process to discuss appropriate arrangements, without pressuring the person to accept an uncertain option.

15 **Eli:** I will keep the participant's information limited to the people who need it for this purpose.

16 **Hana:** Good. [5] _____ avoids turning a necessary coordination message into a general announcement about someone's health.

17 **Eli:** The final message should identify what the venue has confirmed and which question is still unresolved.

18 **Hana:** It should also make clear who the participant can contact before the event and how the real emergency procedures are handled onsite.

19 **Eli:** Then we have a factual coordination task, not permission to diagnose an allergy or improvise a clinical response.

20 **Hana:** Correct. A [6] _____ is different from a reassuring phrase with no confirmed preparation information behind it.

ANSWERS / EXPLANATIONS: PAGE 101

1. reported allergy | 2. allergen cross-contact | 3. ingredient verification | 4. preparation controls | 5. Purpose-limited sharing | 6. verified arrangement

A recipe substitution was not checked

F Say it in a new situation

A venue changes a packaged ingredient after an earlier menu review. The replacement product has not been checked against the participant's reported allergen information. No dish-safety assurance is established.

Complete the four gaps. Use each bank entry once.

WORD + PHRASE BANK

product / verification / assurance / replacement

Coordinator: "The recipe now uses a [1] _____ ingredient."

Educator: "The earlier check does not verify the new [2] _____."

Coordinator: "We need the responsible team's current [3] _____."

Educator: "We cannot offer an unsupported safety [4] _____."

ANSWERS / EXPLANATIONS: PAGE 101

1. replacement | 2. product | 3. verification | 4. assurance

Read, switch, repeat

1. Check the four answers and read the complete exchange aloud.

2. Switch roles. Read it again with the word bank covered.

3. Return to the extended conversation. Read turns 1-10, then switch roles for turns 11-20. Use the corrected expressions.

SOLO PRACTICE

Read both roles. Pause briefly at each change of speaker. Repeat any line that needed an answer check.

Making a remote consultation private and usable

E More workplace conversations / 1-10

Clarify consent, privacy, interpretation, and label visibility in a remote nutrition appointment.

Dietitian Ren meets client Sofia by video. Sofia is in a shared room, her label photograph is unreadable, and she asks for qualified language support. They agree to pause detailed discussion while the service arranges an appropriate private appointment and interpreter. No urgent symptom or clinical instruction is supplied.

PEOPLE / Ren: Dietitian | Sofia: Client

Use each bank entry once, without changing its form. Answers follow turn 20.

WORD + PHRASE BANK

technical barrier / informed agreement / qualified interpreter / legible label / appointment confirmation / privacy

01 **Ren:** Before discussing your record, can we check whether this is a private place where you are comfortable speaking?

02 **Sofia:** Not really. Other people can hear me, and I did not realize how much personal information we might discuss.

03 **Ren:** We can pause the details and arrange a suitable option through the service rather than asking you to speak over that concern.

04 **Sofia:** Thank you. I need [1] _____ before I can explain my routine honestly, especially when the room is shared.

05 **Ren:** Are you also comfortable using English for the appointment, or would qualified language support help?

06 **Sofia:** I would prefer a [2] _____. I can discuss everyday food, but I lose details when the language becomes technical.

07 **Ren:** We can request the appropriate service. I will speak to you directly and leave time for complete interpretation.

08 **Sofia:** I had thought I should ask a colleague in the room, but I would rather not share my personal information that way.

09 **Ren:** That preference matters. We should explain the actual arrangements and obtain the relevant [3] _____ rather than assume that joining the call settled every question.

10 **Sofia:** The label photograph I sent is also blurry. I cannot tell which line you are trying to read.

The conversation, continued

E More workplace conversations / 11-20

Continue with the word bank on page 79.

11 **Ren:** Then I should not guess the amount from an unreadable picture or a similar product online.

12 **Sofia:** I can provide a [4] _____ through the service's approved route when I am able to photograph it clearly.

13 **Ren:** Good. Keep the actual product and serving information visible, and avoid including unrelated personal material in the image.

14 **Sofia:** Does the technical difficulty mean you will record that I did not cooperate with the appointment?

15 **Ren:** No. A [5] _____ and a privacy concern are practical problems, not evidence of unwillingness to participate.

16 **Sofia:** I would like to confirm the next appointment arrangement rather than leave with a vague instruction to try again.

17 **Ren:** We can identify the service contact responsible for the private appointment option and the interpreter request.

18 **Sofia:** Then I know which action is mine and which one belongs to the service.

19 **Ren:** Exactly. The [6] _____ needs to reflect the real booking status and language-support arrangement.

20 **Sofia:** That lets us return to the nutrition questions when we can actually hear, understand, and discuss them appropriately.

ANSWERS / EXPLANATIONS: PAGE 102

1. privacy | 2. qualified interpreter | 3. informed agreement | 4. legible label | 5. technical barrier | 6. appointment confirmation

The interpreter request is pending

F Say it in a new situation

The service has offered a new appointment slot, but the requested interpreter has not been confirmed. The client has not yet accepted the slot.

Complete the four gaps. Use each bank entry once.

WORD + PHRASE BANK

acceptance / status / pending / offered

Service: "The appointment slot is currently [1] _____."

Client: "The interpreter arrangement remains [2] _____."

Service: "We still need your [3] _____."

Client: "Please send the actual booking [4] _____."

ANSWERS / EXPLANATIONS: PAGE 102

1. offered | 2. pending | 3. acceptance | 4. status

Read, switch, repeat

1. Check the four answers and read the complete exchange aloud.

2. Switch roles. Read it again with the word bank covered.

3. Return to the extended conversation. Read turns 1-10, then switch roles for turns 11-20. Use the corrected expressions.

SOLO PRACTICE

Read both roles. Pause briefly at each change of speaker. Repeat any line that needed an answer check.

Reviewing an incomplete food record without filling the gaps

E More workplace conversations / 1-10

Distinguish missing entries, omitted details, and confirmed absence in a follow-up conversation.

Client Jamie returns a three-day food record. Tuesday's lunch field is blank because Jamie forgot to record it, not because no lunch was eaten. Monday's beverage entry is complete. Wednesday's takeout ingredients are uncertain. Nutrition professional Priya corrects the record's interpretation without inventing foods or exact quantities.

PEOPLE / Jamie: Client | Priya: Nutrition professional

Use each bank entry once, without changing its form. Answers follow turn 20.

WORD + PHRASE BANK

explanation of missingness / accurate summary / entry status / missing data / documented limitation / ingredient uncertainty

01 **Jamie:** I returned the three-day record, but I realized the blank on Tuesday might look like I did not eat lunch.

02 **Priya:** Let us clarify that before interpreting it. Does the blank mean no lunch, or no entry was made?

03 **Jamie:** No entry was made. I ate, but I cannot reconstruct the meal accurately enough now.

04 **Priya:** Then we should record [1] _____ rather than convert the blank into a confirmed skipped meal.

05 **Jamie:** Monday's drink information is complete, though. I recorded every beverage I remembered at the time.

06 **Priya:** We can preserve that distinction. An [2] _____ can differ across the same record instead of everything being simply complete or incomplete.

07 **Jamie:** The Wednesday takeout description is uncertain because the restaurant did not provide the ingredient details.

08 **Priya:** Mark that [3] _____. A plausible recipe from another restaurant would not establish what was in your food.

09 **Jamie:** I was tempted to add exact numbers because the form looked more professional when every field was filled.

10 **Priya:** A complete-looking form is not more accurate if the numbers are invented. We can explain which amounts remain approximate.

The conversation, continued

E More workplace conversations / 11-20

Continue with the word bank on page 82.

11 **Jamie:** So the record can contain both useful information and clear limitations without becoming useless.

12 **Priya:** Yes. A [4] _____ helps the next person interpret the material correctly rather than assuming certainty that you never claimed.

13 **Jamie:** Should I go back and change the blank to no lunch just to make the form easier to process?

14 **Priya:** No. That would create a false fact. The correction should describe the missing entry and what you actually remember.

15 **Jamie:** I can explain why the field is missing, but that does not recover the lost detail.

16 **Priya:** Correct. An [5] _____ tells us why the gap exists; it does not magically supply the missing meal.

17 **Jamie:** At the next review, I would like to use the same definitions so the record is easier to discuss.

18 **Priya:** We can clarify the categories and timing together while keeping the recording task manageable and relevant.

19 **Jamie:** Then the revised summary will separate complete drinks, missing lunch information, and uncertain ingredients.

20 **Priya:** That is an [6] _____ because it preserves the evidence levels instead of flattening every entry into a confident account.

ANSWERS / EXPLANATIONS: PAGE 103

1. missing data | 2. entry status | 3. ingredient uncertainty | 4. documented limitation | 5. explanation of missingness | 6. accurate summary

A blank means not recorded

F Say it in a new situation

A beverage field is blank because the client forgot to record drinks. The client remembers drinking something but cannot identify the amount. No zero-intake claim is supported.

Complete the four gaps. Use each bank entry once.

WORD + PHRASE BANK

distinction / zero / recorded / unknown

Client: "The drinks were not [1] _____."

Professional: "The amount is still [2] _____."

Client: "The blank must not become [3] _____."

Professional: "We should preserve that [4] _____."

ANSWERS / EXPLANATIONS: PAGE 103

1. recorded | 2. unknown | 3. zero | 4. distinction

Read, switch, repeat

1. Check the four answers and read the complete exchange aloud.

2. Switch roles. Read it again with the word bank covered.

3. Return to the extended conversation. Read turns 1-10, then switch roles for turns 11-20. Use the corrected expressions.

SOLO PRACTICE

Read both roles. Pause briefly at each change of speaker. Repeat any line that needed an answer check.

01 Briefing and language checks

Taking a dietary history without judgment

A Briefing checks / page 4

1. Which record is being discussed first?

B. Yesterday's intake
Rina describes one day and explicitly says other days differ.

2. What explains the missed meal in this account?

B. No scheduled meal break
The supplied explanation is the work schedule, not a clinical finding.

3. Which quantity remains uncertain?

B. The size of each mug
Rina remembers two mugs but cannot specify their volume.

D Language checks / page 9

1. Which follow-up best tests whether yesterday was typical?

C. How does that compare with your other shifts?
Comparing shifts checks representativeness without assuming a pattern or motive.

2. Which summary preserves the uncertainty?

D. Two mugs; volume not recalled
The count is known, while container volume is not supplied.

3. Which wording is least judgmental?

D. What made a meal difficult during that shift?
This question asks about circumstances without alleging failure or misconduct.

4. Which distinction matters when interpreting this record?

A. Intake on one day versus usual intake
The central limitation is that one day's account cannot establish the usual pattern.

01 Conversation answers

Taking a dietary history without judgment

E Dialogue gaps 1-5

Pages 10-11

1. 24-hour recall. Turn 2. A 24-hour recall concerns a specified day, not an assumed average across the week.

2. shift work. Turn 4. Shift work changes the timing of work and can affect opportunities to eat.

3. appetite. Turn 6. Appetite concerns the desire to eat, which is different from having time or access to food.

4. portion estimate. Turn 8. A portion estimate describes the approximate amount actually eaten rather than a prescribed amount.

5. household measure. Turn 10. A household measure uses a familiar container or utensil to make an amount easier to describe.

F Transfer answers 1-2

Page 12

1. mug

Professional: "Your word cup referred to a mug."

The client meant a drinking container rather than a standardized measure.

2. unknown

Client: "The exact volume is still unknown."

No measurement is supplied, so the precise volume remains uncertain.

E Dialogue gaps 6-10

Pages 10-11

6. beverage intake. Turn 12. Beverage intake includes drinks across the stated period, not just drinks taken with meals.

7. meal pattern. Turn 14. A meal pattern describes the timing and arrangement of eating occasions rather than judging food choices.

8. usual intake. Turn 16. Usual intake is the pattern over time and cannot be established from one unusual day alone.

9. neutral probe. Turn 18. A neutral probe elicits detail without implying blame or assuming why the person acted.

10. food record. Turn 20. A food record documents foods and drinks over a stated period and can capture differences between shifts.

F Transfer answers 3-4

Page 12

3. clarification

Professional: "The record needs that clarification."

Clarifying the container prevents the entry from appearing precisely measured.

4. container

Client: "Next time I can show you the container."

Seeing the actual container can help describe the amount more accurately.

02 Briefing and language checks

Explaining serving sizes and label comparisons

A Briefing checks / page 13

1. How many servings did Jordan eat?

D. Two
Jordan ate the entire package, which contains two stated servings.

2. How much added sugar was in the whole package?

C. 10 grams
Two servings multiplied by five grams gives ten grams of added sugars.

3. Why should the second product's serving weight be checked?

B. The reference amounts differ
Different reference amounts can make a per-serving comparison misleading.

D Language checks / page 18

1. Which statement explains the whole package correctly?

D. 24 grams total sugars, including 10 grams added
Both per-serving amounts double, while added sugars remain part of total sugars.

2. What does including signal?

B. A quantity within the total
Including identifies a subset and prevents double-counting the same nutrient amount.

3. Which comparison is most defensible?

D. Compare equivalent amounts before interpreting the figures
Equivalent reference amounts are necessary for a meaningful quantity comparison.

4. Which statement avoids turning the label into a prescription?

D. This is the label's reference serving, not your individualized portion
The label reports nutrition information and does not prescribe an individual's intake.

02 Conversation answers

Explaining serving sizes and label comparisons

E Dialogue gaps 1-5

Pages 19-20

1. Nutrition Facts panel. Turn 2. The Nutrition Facts panel provides the serving reference and nutrient amounts needed to resolve the disagreement.

2. servings per container. Turn 4. Servings per container tells us that the full package contains two of the label's reference servings.

3. added sugars. Turn 6. Added sugars are included within the stated total sugars and must not be counted a second time.

4. per-container value. Turn 8. The per-container value describes the whole package, unlike the figures printed for one serving.

5. serving size. Turn 10. Serving size supplies a reference for the label figures and is not an individualized prescription for the client.

F Transfer answers 1-2

Page 21

1. three

Client: "The bottle contains three servings."

The package explicitly lists three servings, all of which were consumed.

2. twelve

Educator: "The whole bottle has twelve grams of total sugars."

Three servings multiplied by four grams gives twelve grams total.

E Dialogue gaps 6-10

Pages 19-20

6. reference amount. Turn 12. The reference amount is the quantity behind each number, and unequal quantities can distort a comparison.

7. like-for-like comparison. Turn 14. A like-for-like comparison uses equivalent quantities and definitions so the difference has a meaningful basis.

8. Percent Daily Value. Turn 16. Percent Daily Value uses a general label reference amount rather than measuring the person's actual intake that day.

9. ingredient list. Turn 18. The ingredient list identifies ingredients, while the nutrition panel reports amounts of specified nutrients.

10. per-serving value. Turn 20. The per-serving value applies to one stated label serving and must be scaled when a different amount is eaten.

F Transfer answers 3-4

Page 21

3. included

Client: "Added sugars are included in that total."

Added sugars are a subset of total sugars, not an extra amount.

4. target

Educator: "The label does not set a personal target."

The scenario gives label quantities but no individualized nutrition target.

03 Briefing and language checks

Adapting plans to food access and culture

A Briefing checks / page 22

1. Which food preference is explicit?

A. Keeping rice and beans
Ana explicitly wants to preserve rice and beans in her meals.

2. Which storage option is unavailable?

A. Freezer space
The brief states that Ana has no freezer space available.

3. What kind of decision is being discussed?

D. Feasible shopping options
The discussion concerns access and feasibility, not an individualized clinical prescription.

D Language checks / page 27

1. Which suggestion best respects the stated storage limit?

D. Compare manageable packages and shelf-stable options
Manageable packages and appropriate shelf-stable options can be discussed without assuming unavailable freezer space.

2. Which question checks acceptability?

A. Which option would you actually want to eat?
Acceptability concerns the client's preferences, not conformity to the professional's meals.

3. What does a lower unit price establish?

A. Lower cost for the comparison quantity
Unit price compares equivalent quantities but does not settle total cost or practicality.

4. Which resource offer preserves choice?

C. Would you like information about local food support?
Asking permission offers practical support without making an unsupported judgment or decision.

03 Conversation answers

Adapting plans to food access and culture

E Dialogue gaps 1-5

Pages 28-29

1. storage capacity. Turn 2. Storage capacity concerns the actual space and conditions available for food, which constrain a feasible shopping plan.

2. staple food. Turn 4. A staple food is central to familiar meals and need not be removed merely because the professional suggests changes.

3. unit price. Turn 6. Unit price compares cost for a standard quantity and does not by itself describe the full amount paid at checkout.

4. shelf-stable. Turn 8. Shelf-stable describes storage under specified conditions, and opening the package can change the storage requirements.

5. equipment access. Turn 10. Equipment access identifies the preparation tools actually available rather than assuming a fully equipped private kitchen.

E Dialogue gaps 6-10

Pages 28-29

6. Batch cooking. Turn 12. Batch cooking means preparing multiple portions together, but its feasibility depends on safe storage and available space.

7. acceptability. Turn 14. Acceptability asks whether the available option suits the person's preferences and circumstances, not merely whether it is available.

8. food waste. Turn 16. Food waste is food discarded rather than eaten, which can make a seemingly economical purchase impractical.

9. cultural preference. Turn 18. A cultural preference informs the plan and should not be treated as an obstacle or a defect in the client.

10. community food resource. Turn 20. A community food resource is a local support option whose access arrangements and suitability should be checked with the client.

F Transfer answers 1-2

Page 30

1. five

Client: "My available budget is five dollars."

The brief gives five dollars as the amount available for this purchase.

2. eight

Professional: "The larger package costs eight dollars upfront."

Eight dollars exceeds the stated amount available at the checkout.

F Transfer answers 3-4

Page 30

3. storage

Client: "I also lack safe storage."

The larger package cannot be stored safely in the supplied situation.

4. feasibility

Professional: "The lower unit price does not settle feasibility."

Cost at checkout and safe storage both affect whether the purchase is practical.

04 Briefing and language checks

Discussing nutrient sources without a one-food solution

A Briefing checks / page 31

1. Which product lists added calcium and vitamin B12?

D. Drink A
Only Drink A lists those added nutrients in the supplied labels.

2. What has not been supplied?

C. Individual nutrient requirements
The case contains label facts but no individualized requirement assessment.

3. What can the discussion establish from the labels alone?

A. The listed nutrient differences
The labels support a product comparison, not a clinical conclusion about Dev.

D Language checks / page 36

1. Which explanation is accurate?

B. Drink A lists added B12; Drink B does not
The supplied labels establish a difference between products, not Dev's nutritional status.

2. Which question clarifies the dietary label?

A. Which foods do you include and exclude?
Asking about actual foods clarifies what the person's dietary label means in practice.

3. What does bioavailability refer to?

C. Availability of an ingested substance for bodily use
Bioavailability concerns uptake and use, not shopping access or preference.

4. Which conclusion needs more information?

A. Whether the whole pattern meets Dev's needs
Assessing nutrient adequacy needs information beyond the two product descriptions supplied.

04 Conversation answers

Discussing nutrient sources without a one-food solution

E Dialogue gaps 1-5

Pages 37-38

1. plant-based pattern. Turn 2. A plant-based pattern can mean different food choices, so the professional asks which foods are actually included or excluded.

2. vegan diet. Turn 4. A vegan diet excludes animal-derived foods, but that label alone does not describe the person's complete nutrient intake.

3. fortification. Turn 6. Fortification is the addition of specified nutrients to a product and cannot be assumed for every product in the same category.

4. vitamin B12. Turn 8. Vitamin B12 is one of the added nutrients explicitly listed for Drink A in this fictional comparison.

5. Nutrient adequacy. Turn 10. Nutrient adequacy concerns whether the overall intake meets relevant needs, which cannot be determined from one product choice alone.

F Transfer answers 1-2

Page 39

1. brand

Client: "I changed the brand I buy."

The change concerns the actual product, not merely a different package size.

2. label

Dietitian: "We need to check its current label."

The current label provides the product information needed for the comparison.

E Dialogue gaps 6-10

Pages 37-38

6. protein source. Turn 12. A protein source contributes protein, but no single food must be assumed to describe the entire dietary pattern.

7. legumes. Turn 14. Legumes include beans and lentils, making the term directly relevant to the foods the client already eats.

8. Bioavailability. Turn 16. Bioavailability describes how an ingested substance becomes available for bodily use, not whether a retailer stocks a food.

9. micronutrient. Turn 18. A micronutrient is a vitamin or mineral needed in relatively small amounts; the conversation does not establish the client's status.

10. dietary variety. Turn 20. Dietary variety concerns the range of foods eaten over time and provides more context than a single dietary label.

F Transfer answers 3-4

Page 39

3. deficiency

Client: "A nutrient difference does not establish a deficiency."

No clinical assessment or test result establishes a deficiency in this case.

4. pattern

Dietitian: "We also need the wider dietary pattern."

Overall intake provides context that cannot be supplied by one product label.

05 Briefing and language checks

Clarifying a clinical referral and assessment

A Briefing checks / page 40

1. What does the supplied result establish?

D. A laboratory flag was reported
Only a reported flag is supplied; the actual test and interpretation are absent.

2. Who requested the nutrition assessment?

B. Dr Chen
Dr Chen is explicitly named as the referring clinician in the case.

3. Which question requires appropriate clinical interpretation?

D. What the flagged test means medically
Interpreting an unspecified test medically requires the actual result and qualified clinical review.

D Language checks / page 45

1. Which sentence avoids an unsupported cause?

A. You were referred after a flagged result
After preserves the sequence without asserting an unestablished dietary cause.

2. What should Ellis request?

A. The actual referral question and authorized relevant information
The missing referral detail and actual record are needed before interpreting the assessment task.

3. Which distinction should remain explicit?

A. Nutrition diagnosis and medical diagnosis
Those diagnostic terms concern different professional meanings and cannot be used interchangeably.

4. Which reply best addresses Morgan's concern?

C. The flag alone does not tell us that food caused it
The reply rejects unsupported blame without denying that nutrition may be relevant after assessment.

05 Conversation answers

Clarifying a clinical referral and assessment

E Dialogue gaps 1-5

Pages 46-47

1. abnormal flag. Turn 2. An abnormal flag marks a result against a laboratory criterion but does not establish a dietary cause or diagnosis by itself.

2. clinical interpretation. Turn 4. Clinical interpretation explains the actual finding in the person's health context and requires appropriate professional review.

3. nutrition assessment. Turn 6. A nutrition assessment collects and interprets relevant nutrition information rather than replacing medical interpretation of an unspecified test.

4. referral question. Turn 8. The referral question states what the referring professional wants the receiving service to assess or address.

5. laboratory reference range. Turn 10. A laboratory reference range is a comparison interval and does not independently supply a complete clinical diagnosis.

F Transfer answers 1-2

Page 48

1. missing

Receiver: "The referral question is missing."

The words nutrition review do not specify the question to be addressed.

2. information

Referrer: "I will provide the relevant test information."

The actual relevant information is needed rather than a guessed result.

E Dialogue gaps 6-10

Pages 46-47

6. record access. Turn 12. Record access must be authorized and directed toward the relevant information rather than unrestricted sharing of personal records.

7. nutrition diagnosis. Turn 14. A nutrition diagnosis identifies a nutrition-related problem through an appropriate assessment framework and is not interchangeable with a medical diagnosis.

8. Etiology. Turn 16. Etiology concerns the cause or origin of a problem, which has not been established by the referral sequence in this case.

9. care coordination. Turn 18. Care coordination organizes responsibilities across services so an unanswered clinical question has an appropriate owner and response route.

10. assessment finding. Turn 20. An assessment finding must come from the assessment performed, not from invented details added to fill gaps in the referral.

F Transfer answers 3-4

Page 48

3. channel

Receiver: "We will use the authorized channel."

The scenario explicitly requires an authorized route for sharing relevant information.

4. diagnosis

Referrer: "The referral alone is not a confirmed diagnosis."

The incomplete referral does not independently establish any named clinical condition.

06 Briefing and language checks

Handling supplement claims and interaction questions

A Briefing checks / page 49

1. What is missing from the advertisement?

C. Details of the tested formulation and outcomes
The brief states that essential details behind the testing claim are absent.

2. Why is an interaction review needed?

D. Alex also takes a prescription medicine
Product and medicine details need qualified review; the advertising language cannot establish compatibility.

3. Which instruction is not supplied?

D. A stop or start direction
No treatment or supplement change is authorized by the facts of this exercise.

D Language checks / page 54

1. Which question best evaluates clinically tested?

C. What formulation, population, and outcome were studied?
The tested product, participants, and outcomes are needed to understand what the claim supports.

2. What does natural establish here?

D. An advertising description, not verified compatibility
The word natural does not supply the missing safety or interaction assessment.

3. Which distinction is accurate?

A. Quality testing and clinical effectiveness answer different questions
Product-quality checks do not themselves establish clinical benefit or individual compatibility.

4. Which next step stays within the supplied facts?

B. Obtain product details for appropriate pharmacist or prescriber review
The scenario calls for qualified review using actual details, not a treatment instruction.

06 Conversation answers

Handling supplement claims and interaction questions

E Dialogue gaps 1-5

Pages 55-56

1. Supplement Facts panel. Turn 2. The Supplement Facts panel gives relevant product ingredients and amounts that an advertisement may omit.

2. formulation. Turn 4. Formulation identifies the actual product composition and form, which must match the evidence being discussed.

3. study population. Turn 6. The study population identifies the people researched and affects how far the findings can be applied to another person.

4. outcome measure. Turn 8. An outcome measure defines what result the study assessed, allowing a vague benefit claim to be examined more precisely.

5. interaction. Turn 10. An interaction concerns one substance affecting another's action or safety and cannot be ruled out by the word natural.

F Transfer answers 1-2

Page 57

1. quality

Client: "The seal refers to specified product quality."

The brief describes quality characteristics as the stated purpose of testing.

2. benefit

Professional: "That is different from clinical benefit."

A quality check does not by itself establish benefit for a condition.

E Dialogue gaps 6-10

Pages 55-56

6. pharmacist review. Turn 12. Pharmacist review needs accurate product and medicine information rather than invented names or amounts.

7. Third-party testing. Turn 14. Third-party testing may address specified quality questions but does not automatically prove clinical effectiveness or individual safety.

8. Evidence quality. Turn 16. Evidence quality concerns the strength and reliability of the support for a claim, not the confidence of its advertising language.

9. adverse effect. Turn 18. An adverse effect is an unwanted harmful effect that warrants the appropriate clinical response and reporting process.

10. health claim. Turn 20. A health claim must be examined against its actual evidence and applicable meaning rather than treated as a personalized treatment recommendation.

F Transfer answers 3-4

Page 57

3. supplied

Client: "The outcome study is not supplied."

No clinical outcome study is provided in the advertisement described here.

4. guarantee

Professional: "We should not turn the seal into a guarantee."

The limited testing claim cannot justify a guaranteed personal health outcome.

07 Briefing and language checks

Agreeing on a small, measurable change

A Briefing checks / page 58

1. Which action does Taylor choose?

C. Prepare lunch for Tuesday
Taylor selects one prepared lunch on Tuesday from the two supplied options.

2. What will the review examine?

B. Preparation and break feasibility
The agreed review concerns whether the specific action fitted the routine.

3. Which target is absent?

D. A weight target
No weight target or calorie prescription is agreed in this case.

D Language checks / page 63

1. Which goal matches the agreement?

A. Prepare lunch for Tuesday and review feasibility
The agreement is a single chosen action with a practical review, not a universal rule.

2. Which question explores a barrier without blame?

D. What got in the way of the preparation step?
This question seeks a concrete obstacle rather than attributing a negative motive.

3. Which is the most relevant process measure?

C. Whether the lunch was prepared and a break was available
The selected measure directly examines the agreed action and its practical conditions.

4. How should mixed feelings be described?

C. Ambivalence about the proposed change
Ambivalence describes mixed feelings without turning them into blame or an unsupported diagnosis.

07 Conversation answers

Agreeing on a small, measurable change

E Dialogue gaps 1-5

Pages 64-65

1. reflective listening. Turn 2. Reflective listening restates the client's meaning so it can be confirmed or corrected before a plan is chosen.

2. ambivalence. Turn 4. Ambivalence means mixed feelings about the change, not a refusal to engage or a diagnosis.

3. collaborative goal. Turn 6. A collaborative goal is chosen through discussion and reflects the client's preference rather than an imposed instruction.

4. action plan. Turn 8. An action plan specifies the practical arrangements for carrying out the agreed step, here preparing lunch for Tuesday.

5. barrier. Turn 10. A barrier is a circumstance that makes the action harder; here it is a possible change in work timing.

F Transfer answers 1-2

Page 66

1. prepared

Client: "The lunch was prepared."

The preparation step occurred, so it should not be recorded as absent.

2. unavailable

Professional: "The planned break became unavailable."

The changed shift removed the planned opportunity to eat the lunch.

E Dialogue gaps 6-10

Pages 64-65

6. contingency plan. Turn 12. A contingency plan provides an agreed alternative for a specified disruption rather than treating the disruption as personal failure.

7. process measure. Turn 14. A process measure checks whether the agreed action and its practical steps occurred rather than assuming a health outcome.

8. behavioral goal. Turn 16. A behavioral goal is stated as an action, such as preparing lunch, rather than a guaranteed weight or health outcome.

9. goal revision. Turn 18. Goal revision changes an agreed target in response to information about its fit, rather than automatically treating difficulty as failure.

10. autonomy. Turn 20. Autonomy means the client retains an informed choice about the action rather than being required to accept the professional's preference.

F Transfer answers 3-4

Page 66

3. process

Client: "Those are separate parts of the process."

Preparation and break access are different practical steps in the agreed action.

4. blame

Professional: "We can review the barrier without blame."

The scenario supports a practical review, not a negative judgment about motivation.

08 Briefing and language checks

Coordinating follow-up and practical food support

A Briefing checks / page 67

1. What is already complete?

B. Sending the referral
Only referral submission is complete in the facts supplied here.

2. What concern has Pat reported?

D. Difficulty shopping during recovery at home
Pat reports a practical shopping difficulty; no clinical diet instruction is supplied.

3. What permission is stated?

B. Consent to the relevant information exchange
The case limits permission to the relevant exchange between the services involved.

D Language checks / page 72

1. Which handoff states the current position accurately?

A. Referral sent; eligibility and start date unconfirmed
The supplied facts establish submission only, with the later stages still unresolved.

2. Which instruction must not be added?

C. A texture-modified diet order
No swallowing assessment or authorized diet order is supplied in the scenario.

3. Which question checks a real outcome?

D. Has the service confirmed a start date and informed Pat?
Confirmation and client communication provide stronger evidence than internal administrative activity alone.

4. Which statement distinguishes contact states?

C. A voicemail is an attempt, not confirmed contact
A contact attempt does not establish that the intended person received and understood the message.

08 Conversation answers

Coordinating follow-up and practical food support

E Dialogue gaps 1-5

Pages 73-74

1. community referral. Turn 2. A community referral requests support from a service, but sending it does not establish acceptance or delivery.

2. eligibility criteria. Turn 4. Eligibility criteria are the service's access conditions and must be verified rather than inferred from referral submission.

3. Service capacity. Turn 6. Service capacity concerns what support is currently available and can affect whether or when a referral can be acted on.

4. referral acceptance. Turn 8. Referral acceptance confirms that the receiving service has accepted the request; it is separate from the first delivery.

5. diet order. Turn 10. A diet order is an authorized clinical instruction and cannot be invented from a referral or professional job title.

F Transfer answers 1-2

Page 75

1. accepted

Coordinator: "The referral is now accepted."

The service has confirmed acceptance, which is a completed step in this update.

2. proposed

Colleague: "Thursday is the proposed start date."

The date is proposed, not evidence that delivery has already happened.

E Dialogue gaps 6-10

Pages 73-74

6. texture modification. Turn 12. Texture modification changes food consistency under an appropriate assessed plan and is not supplied by this scenario.

7. Consent to share. Turn 14. Consent to share concerns a defined information exchange and does not automatically permit unrestricted distribution of the client's records.

8. contact attempt. Turn 16. A contact attempt is an effort to reach someone and must not be confused with verified successful communication.

9. delivery schedule. Turn 18. The delivery schedule must be confirmed with the service rather than assumed from the date the referral was sent.

10. closed-loop referral. Turn 20. A closed-loop referral checks receipt, action, and relevant outcomes rather than ending when the request leaves the sender.

F Transfer answers 3-4

Page 75

3. attempt

Coordinator: "The voicemail was a contact attempt."

Leaving voicemail does not establish a completed conversation with the client.

4. occurred

Colleague: "A delivery has not yet occurred."

The brief explicitly states that no delivery has taken place.

09 Conversation answers

Checking a food-allergy message before a group event

E Extended conversation

Pages 76-77

1. reported allergy. Turn 4. A reported allergy needs accurate clarification and the appropriate safety process, rather than being relabeled as an ordinary preference.

2. allergen cross-contact. Turn 6. Allergen cross-contact concerns unintended transfer of an allergen and is not resolved merely by removing a visible garnish.

3. ingredient verification. Turn 10. Ingredient verification checks the actual ingredients and current product information rather than relying on an old menu or a dish name.

4. preparation controls. Turn 12. Preparation controls describe actual arrangements intended to manage food-handling risks and must be verified by the responsible service.

5. Purpose-limited sharing. Turn 16. Purpose-limited sharing restricts relevant personal information to the people and purpose for which it is legitimately needed.

6. verified arrangement. Turn 20. A verified arrangement reflects confirmed practical facts and must not be confused with an unsupported promise that a dish is safe.

F Transfer exchange

Page 78

1. replacement

Coordinator: "The recipe now uses a replacement ingredient."

The venue changed the product after the earlier review took place.

2. product

Educator: "The earlier check does not verify the new product."

A check of the previous product cannot establish the replacement's ingredients.

3. verification

Coordinator: "We need the responsible team's current verification."

Current product and preparation information must come from the responsible service.

4. assurance

Educator: "We cannot offer an unsupported safety assurance."

The scenario does not establish the facts needed for a dish-safety promise.

10 Conversation answers

Making a remote consultation private and usable

E Extended conversation

Pages 79-80

1. privacy. Turn 4. Privacy concerns the conditions under which personal information is discussed and is not guaranteed merely because an appointment is online.

2. qualified interpreter. Turn 6. A qualified interpreter supports accurate communication through the service's appropriate arrangements rather than relying on an unprepared bystander.

3. informed agreement. Turn 9. Informed agreement follows an explanation of the actual arrangements and should not be assumed simply because someone joined a video call.

4. legible label. Turn 12. A legible label allows the actual product information to be read instead of substituting guesses or details from another product.

5. technical barrier. Turn 15. A technical barrier prevents usable communication or information access and must not be relabeled as a client's unwillingness to participate.

6. appointment confirmation. Turn 19. Appointment confirmation should identify the actual agreed arrangements rather than treating a request for a new slot as a completed booking.

F Transfer exchange

Page 81

1. offered

Service: "The appointment slot is currently offered."

An offered slot is not a confirmed booking accepted by the client.

2. pending

Client: "The interpreter arrangement remains pending."

The service has not yet confirmed the requested language support.

3. acceptance

Service: "We still need your acceptance."

The client has not accepted the proposed appointment arrangement in this case.

4. status

Client: "Please send the actual booking status."

A clear status update should distinguish offered, accepted, and confirmed arrangements.

11 Conversation answers

Reviewing an incomplete food record without filling the gaps

E Extended conversation

Pages 82-83

1. missing data. Turn 4. Missing data indicates that the information was not recorded or available, which is different from a confirmed absence of intake.

2. entry status. Turn 6. Entry status identifies whether a particular record field is complete, missing, or uncertain rather than labeling the whole record uniformly.

3. ingredient uncertainty. Turn 8. Ingredient uncertainty preserves the limit of what is known about the actual meal instead of replacing it with a guessed recipe.

4. documented limitation. Turn 12. A documented limitation makes an uncertainty visible so later interpretation does not treat incomplete information as established fact.

5. explanation of missingness. Turn 16. An explanation of missingness identifies why information is absent but does not supply the missing food or quantity itself.

6. accurate summary. Turn 20. An accurate summary preserves the different certainty levels of the source entries rather than smoothing them into an unsupported complete account.

F Transfer exchange

Page 84

1. recorded

Client: "The drinks were not recorded."

The missing entry reflects absent recording, not proof that no drinks were consumed.

2. unknown

Professional: "The amount is still unknown."

The client cannot identify an amount from the information supplied.

3. zero

Client: "The blank must not become zero."

Zero would assert no intake, which the client has not reported.

4. distinction

Professional: "We should preserve that distinction."

Missing information and confirmed absence have different meanings in the record.

Find the move you need

Use these as precise language models. Replace details only when you know the actual facts, authority, and agreed conditions.

01 Taking a dietary history without judgment

Open neutrally: Could you walk me through what you ate yesterday?

Clarify quantity: Which cup or container did you use?

Summarize accurately: The missed meal was linked to the break schedule.

Full phrase set: pages 7-8 | Dialogue: pages 10-11

02 Explaining serving sizes and label comparisons

Locate the reference: These figures are for the serving shown here.

Compare fairly: Let us put both labels on the same quantity basis.

Correct arithmetic: The total is twenty-four, not thirty-four grams.

Full phrase set: pages 16-17 | Dialogue: pages 19-20

03 Adapting plans to food access and culture

Preserve preference: Which familiar foods would you like to keep?

Compare costs: The unit price is lower, but the upfront cost is higher.

Confirm feasibility: Let us check cost, storage, and preparation time together.

Full phrase set: pages 25-26 | Dialogue: pages 28-29

04 Discussing nutrient sources without a one-food solution

Clarify the pattern: What does plant-based mean in your meals?

Avoid a leap: That label difference does not diagnose a deficiency.

Preserve scope: Any individualized recommendation needs the appropriate assessment.

Full phrase set: pages 34-35 | Dialogue: pages 37-38

Keep the conversation productive

Use these as precise language models. Replace details only when you know the actual facts, authority, and agreed conditions.

05 Clarifying a clinical referral and assessment

Clarify the purpose: What question did the referring clinician ask us to address?

Explain assessment: We will review relevant intake, history, and available information.

Assign follow-up: Let us confirm who will answer the outstanding test question.

Full phrase set: pages 43-44 | Dialogue: pages 46-47

06 Handling supplement claims and interaction questions

Acknowledge interest: I can see why that claim caught your attention.

Clarify safety: Natural does not tell us whether an interaction is possible.

Avoid an instruction: I am not giving a start, stop, or dose direction here.

Full phrase set: pages 52-53 | Dialogue: pages 55-56

07 Agreeing on a small, measurable change

Reflect the tension: You want a steadier routine, but evenings are already crowded.

Make it specific: Which day and which preparation step are you choosing?

Separate outcome: We are checking whether the action worked, not promising a weight change.

Full phrase set: pages 61-62 | Dialogue: pages 64-65

08 Coordinating follow-up and practical food support

State the practical concern: Pat reports difficulty getting to the shops during recovery.

Avoid an invented order: No verified diet order is included in this handoff.

Close the loop: Please confirm the status and who will update Pat.

Full phrase set: pages 70-71 | Dialogue: pages 73-74

Find a term and its context

The page number leads to the definition and a typical word combination. Repeated terms have separate entries when they serve different lesson contexts.

24-hour recall complete a 24-hour recall 5
abnormal flag clarify an abnormal flag 41
acceptability check meal acceptability 24
action owner confirm the action owner 6
action owner confirm the action owner 15
action owner confirm the action owner 24
action owner confirm the action owner 33
action owner confirm the action owner 42
action owner confirm the action owner 51
action owner confirm the action owner 60
action owner confirm the action owner 69
action plan confirm the action plan 59
active ingredient identify an active ingredient 50
added sugars identify added sugars 14
adverse effect report an adverse effect 51
ambivalence acknowledge ambivalence 59
amino acid explain an amino acid 32
anthropometric data interpret anthropometric data 41
appetite describe changes in appetite 5
assessment finding document an assessment finding 42
autonomy respect client autonomy 59
barrier identify a practical barrier 59
batch cooking discuss batch cooking realistically 23
behavioral goal define a behavioral goal 59

Find a term and its context

The page number leads to the definition and a typical word combination. Repeated terms have separate entries when they serve different lesson contexts.

beverage intake record beverage intake 5
bioavailability discuss nutrient bioavailability 33
biochemical data review biochemical data 41
calcium identify a calcium source 32
care coordination support care coordination 42
check-back complete a check-back 6
check-back complete a check-back 15
check-back complete a check-back 24
check-back complete a check-back 33
check-back complete a check-back 42
check-back complete a check-back 51
check-back complete a check-back 60
check-back complete a check-back 69
clarification request make a targeted clarification request 6
clarification request make a targeted clarification request 15
clarification request make a targeted clarification request 24
clarification request make a targeted clarification request 33
clarification request make a targeted clarification request 42
clarification request make a targeted clarification request 51
clarification request make a targeted clarification request 60
clarification request make a targeted clarification request 69
clinical context preserve clinical context 42
clinical interpretation request clinical interpretation 41
closed-loop referral complete a closed-loop referral 69

Find a term and its context

The page number leads to the definition and a typical word combination. Repeated terms have separate entries when they serve different lesson contexts.

collaborative goal agree on a collaborative goal 59
community food resource identify a community food resource 24
community referral track a community referral 68
confidence rating ask for a confidence rating 59
confirmed contact document confirmed contact 69
consent to share document consent to share 68
contact attempt record a contact attempt 69
contingency plan agree on a contingency plan 60
continuity of support maintain continuity of support 69
contraindication verify a contraindication 51
cultural preference respect a cultural preference 23
delivery schedule confirm the delivery schedule 68
diet order verify a diet order 68
dietary fiber identify dietary fiber 15
dietary history take a dietary history 5
dietary supplement discuss a dietary supplement 50
dietary variety explore dietary variety 33
discharge nutrition plan clarify a discharge nutrition plan 68
dual-column label read a dual-column label 14
eating occasion identify each eating occasion 5
eligibility criteria confirm eligibility criteria 68
enrichment distinguish enrichment from a product claim 33
equipment access establish equipment access 24
etiology avoid assuming etiology 41

Find a term and its context

The page number leads to the definition and a typical word combination. Repeated terms have separate entries when they serve different lesson contexts.

evidence quality assess evidence quality 50
facilitator identify a facilitator 59
follow-up question assign a follow-up question 42
food access assess food access 23
food budget work within a food budget 23
food insecurity discuss food insecurity sensitively 23
food record review a food record 6
food waste reduce avoidable food waste 23
formulation compare the tested formulation 50
fortification check for fortification 32
goal revision discuss goal revision 60
health claim examine a health claim 50
heme iron distinguish heme iron 33
household measure use a household measure 5
implementation intention form an implementation intention 59
informed permission seek informed permission 42
ingredient list examine the ingredient list 14
interaction check for an interaction 51
interim arrangement confirm an interim arrangement 68
iron discuss dietary iron sources 32
label rounding allow for label rounding 15
laboratory reference range check the laboratory reference range 41
legume include familiar legumes 32
like-for-like comparison make a like-for-like comparison 15

Find a term and its context

The page number leads to the definition and a typical word combination. Repeated terms have separate entries when they serve different lesson contexts.

macronutrient explain a macronutrient 32
meal omission explore a meal omission 5
meal pattern describe the meal pattern 5
medical diagnosis distinguish a medical diagnosis 41
medical nutrition therapy explain medical nutrition therapy 41
micronutrient identify a micronutrient 32
minimum necessary information share minimum necessary information 68
naturally occurring sugars distinguish naturally occurring sugars 14
neutral probe use a neutral probe 6
non-heme iron explain non-heme iron 33
nonjudgmental feedback give nonjudgmental feedback 60
nutrient adequacy assess nutrient adequacy 33
nutrient density discuss nutrient density 15
nutrition assessment complete a nutrition assessment 41
nutrition diagnosis distinguish a nutrition diagnosis 41
Nutrition Facts panel read the Nutrition Facts panel 14
outcome goal distinguish an outcome goal 59
outcome measure clarify the outcome measure 50
per-container value calculate the per-container value 14
per-serving value use the per-serving value 14
percent Daily Value interpret percent Daily Value 14
perishable plan for perishable ingredients 23
pharmacist review request pharmacist review 51
plant-based pattern clarify a plant-based pattern 32

Find a term and its context

The page number leads to the definition and a typical word combination. Repeated terms have separate entries when they serve different lesson contexts.

portion estimate clarify a portion estimate 5
preparation method clarify the preparation method 6
preparation time estimate preparation time 24
process measure select a process measure 60
product variability acknowledge product variability 51
proprietary blend clarify a proprietary blend 50
protein source vary the protein sources 32
randomized trial describe a randomized trial 50
readiness explore readiness without pressure 59
recall bias acknowledge recall bias 6
record access confirm record access 42
reference amount align the reference amounts 14
referral acceptance verify referral acceptance 68
referral question clarify the referral question 41
reflective listening use reflective listening 59
review point set a review point 60
satiety describe satiety after a meal 5
saturated fat check saturated fat 15
scope boundary state the scope boundary 6
scope boundary state the scope boundary 15
scope boundary state the scope boundary 24
scope boundary state the scope boundary 33
scope boundary state the scope boundary 42
scope boundary state the scope boundary 51

Find a term and its context

The page number leads to the definition and a typical word combination. Repeated terms have separate entries when they serve different lesson contexts.

scope boundary state the scope boundary 60
scope boundary state the scope boundary 69
seasonal produce compare seasonal produce 24
self-monitoring use focused self-monitoring 60
service capacity check service capacity 68
service handoff complete a service handoff 69
serving size check the serving size 14
servings per container multiply by servings per container 14
shared kitchen plan around a shared kitchen 23
shelf-stable choose a shelf-stable option 23
shift work accommodate rotating shift work 5
signs and symptoms distinguish signs and symptoms 41
snacking ask about snacking 5
sodium content compare sodium content 15
source attribution preserve source attribution 6
source attribution preserve source attribution 15
source attribution preserve source attribution 24
source attribution preserve source attribution 33
source attribution preserve source attribution 42
source attribution preserve source attribution 51
source attribution preserve source attribution 60
source attribution preserve source attribution 69
staple food retain a familiar staple food 23
storage capacity check storage capacity 23

Find a term and its context

The page number leads to the definition and a typical word combination. Repeated terms have separate entries when they serve different lesson contexts.

structure/function claim distinguish a structure/function claim 50
study population identify the study population 50
substitution agree on a feasible substitution 24
Supplement Facts panel inspect the Supplement Facts panel 50
swallowing assessment request a swallowing assessment 69
systematic review consult a systematic review 50
texture modification clarify prescribed texture modification 68
third-party testing interpret third-party testing 51
total sugars compare total sugars 14
unit price compare unit prices 23
usual intake distinguish usual intake 6
vegan diet assess a vegan diet 32
vegetarian diet clarify a vegetarian diet 32
vitamin B12 identify a reliable vitamin B12 source 32
waiting list explain waiting-list status 68
weekend variation explore weekend variation 6
working assumption challenge a working assumption 6
working assumption challenge a working assumption 15
working assumption challenge a working assumption 24
working assumption challenge a working assumption 33
working assumption challenge a working assumption 42
working assumption challenge a working assumption 51
working assumption challenge a working assumption 60
working assumption challenge a working assumption 69

Original cases. Clear boundaries.

These are original fictional teaching conversations, not transcripts of real workers. Names, figures, organizations, and incidents are invented. Sources support terminology and communication aims, not the fictional results or an endorsement of this book.
