

Describing trends

Teaching guide

Describe a change with its amount and time period.

Understand the distinction

Use rise, increase, fall, or decrease for direction. Use remain stable for little change and fluctuate for repeated movement up and down. A number without a time period or unit can be misleading.

Distinguish rise by from rise to: from 40 to 50 is a rise by 10, ending at 50. A change from 20% to 25% is five percentage points, or a 25% relative increase. Describe the data separately from an explanation of its cause.

Compare the patterns

START AND END

Attendance rose from 40 to 50 in June.

The unit is people; the period is June.

AMOUNT

Attendance rose by 10.

By introduces the size of the change.

LIMIT

The figures rose, but the cause is unclear.

The trend alone does not establish a cause.

Read each example and notice how its form changes the meaning. Use these distinctions to choose your answers on the following pages.

Check your understanding

Circle one answer for each question. There is one correct choice among the options shown. Check the answer key after choosing.

1. Attendance rose from 20 to 30. How much did it rise by?

- A. 30 people
- B. 20 people
- C. 10 people

2. Choose the correction: Sales rose by 500 to 600.

- A. Sales rose to 500 from 600.
- B. Sales rose from 500 to 600.
- C. Sales rose from 500 by 600.

3. A rate rises from 10% to 12%. How many percentage points is that?

- A. 12 percentage points
- B. 2 percentage points
- C. 20 percentage points

Choose the best response

Choose the response that fits the situation. Check both its meaning and its grammar.

4. Bus use increased from 80 to 100 journeys per day in July. The cause is unknown. Which report preserves those facts?

A. Bus use rose by 100 journeys per day in July because fares fell.

B. Bus fares rose from 80 to 100 dollars per day in July.

C. Bus use rose from 80 to 100 journeys per day in July. The reason is not yet clear.

Review your choices

Use the answer explanations on the next page. If you chose a different answer, find the detail that makes it unsuitable and try the question again.

Practice online

The web lesson gives feedback for the option you select and lets you try again. No written response is required.

Answers and explanation

1. C. 10 people

Subtract the starting count from the ending count.

A: 30 is the final total. The increase is 30 minus 20.

B: 20 is the starting total, not the amount of increase.

2. B. Sales rose from 500 to 600.

From and to give the starting and ending values.

A: This reverses the starting and finishing values and describes a fall.

C: This says the increase was 600, which would give a final value of 1100.

3. B. 2 percentage points

Subtract the percentages; the relative increase is 20%.

A: 12% is the final rate. Subtract 10 from 12 to find the percentage-point increase.

C: 20% is the relative increase from 10 to 12, not the percentage-point difference.

4. C. Bus use rose from 80 to 100 journeys per day in July. The reason is not yet clear.

The report includes the values, unit, period, and uncertainty about cause.

A: The increase was 20, not 100, and the cause is invented.

B: This changes both the thing measured and its unit.

A practical teaching sequence

1. Notice (2 minutes)

Read the comparison examples with the learners. Point out the meaning and form that distinguish each pattern.

2. Choose (4 minutes)

Learners select one option for each of the three checks. Keep the answer key covered. Use the selected option's explanation rather than presenting a generic model as feedback.

3. Apply (5 minutes)

Bus use increased from 80 to 100 journeys per day in July. The cause is unknown. Which report preserves those facts?

Learners choose the response that fits this situation. All responses in this activity are multiple choice; do not replace the choices with a written-answer task.

4. Review (3 minutes)

Compare selected options with the key. Use the option-specific notes to explain why a distractor does not fit. Let learners change their selection and try again.

Scope of the answer key

Each question has one correct option among the choices shown. This does not mean that every other way to express the idea is wrong. Preserve the qualifications in the teaching notes.

Feedback criteria

Check both grammatical form and the stated situation. A correct option answers this question; four correct choices do not certify a learner's overall proficiency.
