

ENGLISH FOR WORK / SEPTEMBER 2026

Medical Devices English

Conversation lab

8 complete workplace dialogues, followed by eight additional role-play cases. Study the exchanges, then make the conversation your own.

PRACTICE THAT TRANSFERS TO WORK

Read a realistic case. Find the right language. Speak, write, get feedback, and try again.

Eight lessons | Intermediate to advanced | Independent or classroom study

For medical device engineers, product managers, quality and regulatory staff, clinical specialists, manufacturing teams, field-service teams, and device-company leaders.

Fictional language practice for professional communication. Clinical, safety, regulatory, and patient-care decisions follow qualified supervision and current local procedures.

All scenarios, figures, and model responses are fictional teaching material. Use invented details in practice.

[Open this course on English Ladder](#)

Inside this conversation lab

Original fictional training conversations in professional English. These are realistic scripts, not transcripts of actual people. The professional roles are the speaker labels; all figures, incidents, and organizations are invented.

01 User need to design input

02 Risk review

03 Verification versus validation

04 Formative usability findings

05 Submission planning

06 Complaint intake

07 Supplier nonconformance

08 Training within labeling

Then try eight independent role-play cases, followed by feedback criteria and references.

Read it. Hear it. Make it yours.

1. Read the setting. Identify the roles, the immediate problem, and what each speaker needs.
2. Read the whole conversation aloud with a partner. In a group, give a third person the observer role. For three-speaker scripts, assign each professional a separate voice.
3. Notice how the speakers ask a specific question, qualify a claim, disagree, explain a technical point, or agree on a next step. Underline language you would actually use.
4. Cover the script. Recreate the exchange using the situation and professional roles. Keep the meaning, but change the wording.
5. Switch roles and introduce a complication: a missing record, a different priority, an unavailable colleague, or a changed assumption. End with a clear outcome or unresolved question.

Register and terminology

These colleagues use concise professional language. In an internal technical meeting, familiar abbreviations can be natural. With a new colleague or a client, expand unfamiliar terms and check understanding. Keep disagreement directed at the evidence or proposal, and match the degree of certainty to what is known.

Independent study

Speak each role aloud. Pause before the reply and supply your own response before revealing the next line. Record a second version using invented details, then compare its clarity and tone with the script.

Professional context

Fictional language practice for professional communication. Clinical, safety, regulatory, and patient-care decisions follow qualified supervision and current local procedures.

FULL DIALOGUE 01 / 6 SPEAKING TURNS

User need to design input

A device team reviews a vague usability requirement.

Roles: Product manager / Systems engineer

Product manager: Users want the display to be readable at a glance. How do we turn that into a design input?

Systems engineer: Define the intended users, viewing conditions, information, and a measurable acceptance criterion.

Product manager: Can we reuse the criterion from our desktop product?

Systems engineer: Not without checking the use environment. This device will be used under different lighting and workflow conditions.

Product manager: I'll bring those user-research findings to the requirements review.

Systems engineer: Then we can agree on traceable inputs and an appropriate verification approach.

Notice the professional language

design input - A documented requirement that guides a product's design.

Rehearse and extend with AI

Explain the issue and the agreed next step without reading. Identify any point still awaiting evidence, agreement, or approval. Then replay the exchange with a changed constraint and a new ending.

Observer: note one natural professional expression and one place where the follow-up made the meaning clearer.

FULL DIALOGUE 02 / 6 SPEAKING TURNS

Risk review

A team discusses an alarm that users sometimes miss.

Roles: Risk engineer / Human factors specialist

Risk engineer: The hazard analysis lists a missed alarm. Is a louder tone sufficient as a control?

Human factors specialist: We need to examine the use scenario and contributing factors before deciding that.

Risk engineer: Users reported competing alarms and difficulty identifying which device was sounding.

Human factors specialist: Then recognition and workflow matter as well as volume. Let's review the observations and proposed controls together.

Risk engineer: I'll update the risk file with the evidence and open questions.

Human factors specialist: I'll define the usability questions that the next evaluation needs to address.

Notice the professional language

Discuss this wording: "The hazard analysis lists a missed alarm. Is a louder tone sufficient as a control?" What does it help the other professional clarify?

Rehearse and extend with AI

Explain the issue and the agreed next step without reading. Identify any point still awaiting evidence, agreement, or approval. Then replay the exchange with a changed constraint and a new ending.

Observer: note one natural professional expression and one place where the follow-up made the meaning clearer.

FULL DIALOGUE 03 / 6 SPEAKING TURNS

Verification versus validation

A project team reviews a test-completion claim.

Roles: Project manager / Quality engineer

Project manager: All bench tests passed. Can we say validation is complete?

Quality engineer: The bench tests address specified design inputs. Validation addresses intended use and user needs under the planned conditions.

Project manager: So the verification results don't automatically close the validation activities?

Quality engineer: Correct. The traceability matrix still shows open usability and intended-use evidence.

Project manager: I'll separate the two statuses in the milestone report.

Quality engineer: Let's review the approved plans and record exactly which acceptance criteria remain open.

Notice the professional language

acceptance criteria - Specific conditions a deliverable must meet to be accepted.

intended use - The purpose for which a product is designed and represented to be used.

Rehearse and extend with AI

Explain the issue and the agreed next step without reading. Identify any point still awaiting evidence, agreement, or approval. Then replay the exchange with a changed constraint and a new ending.

Observer: note one natural professional expression and one place where the follow-up made the meaning clearer.

FULL DIALOGUE 04 / 6 SPEAKING TURNS

Formative usability findings

A designer and human factors specialist review a simulated-use session.

Roles: Human factors specialist / Interface designer

Human factors specialist: Three participants selected the wrong menu before finding the setting. They recovered without assistance.

Interface designer: Can we classify that as successful task completion and move on?

Human factors specialist: Completion matters, but the use difficulties still need analysis. We should examine potential consequences in the intended workflow.

Interface designer: I'll compare the screen labels and navigation paths from the observations.

Human factors specialist: Keep observed behavior separate from our explanation of why it happened.

Interface designer: I'll prepare design options for the next review rather than assume a label change solves it.

Notice the professional language

Discuss this wording: "Can we classify that as successful task completion and move on?" What does it help the other professional clarify?

Rehearse and extend with AI

Explain the issue and the agreed next step without reading. Identify any point still awaiting evidence, agreement, or approval. Then replay the exchange with a changed constraint and a new ending.

Observer: note one natural professional expression and one place where the follow-up made the meaning clearer.

FULL DIALOGUE 05 / 6 SPEAKING TURNS

Submission planning

A regulatory lead questions a launch assumption.

Roles: Product manager / Regulatory affairs lead

Product manager: A similar device reached market recently. Can we use the same regulatory pathway?

Regulatory affairs lead: Similarity alone doesn't establish the appropriate pathway. Intended use, technology, claims, and jurisdiction all need review.

Product manager: What information do you need to assess it?

Regulatory affairs lead: The current device description, intended-use statement, risk information, and comparison evidence.

Product manager: I'll assemble those and keep the launch date provisional.

Regulatory affairs lead: I'll document the assessment and identify any questions requiring further regulatory clarification.

Notice the professional language

intended use - The purpose for which a product is designed and represented to be used.

Rehearse and extend with AI

Explain the issue and the agreed next step without reading. Identify any point still awaiting evidence, agreement, or approval. Then replay the exchange with a changed constraint and a new ending.

Observer: note one natural professional expression and one place where the follow-up made the meaning clearer.

FULL DIALOGUE 06 / 6 SPEAKING TURNS

Complaint intake

A service report enters the complaint process.

Roles: Service engineer / Complaint specialist

Service engineer: A customer says the device stopped during use. I have the serial number but not the event time.

Complaint specialist: Record what they reported and seek the missing details through the complaint process.

Service engineer: Should I call it operator error? The settings may have been wrong.

Complaint specialist: That's not established. Separate observations from hypotheses and preserve the available logs.

Service engineer: I'll provide the service history and route the report promptly.

Complaint specialist: I'll coordinate the required complaint and reportability assessment; service troubleshooting doesn't replace that review.

Notice the professional language

Discuss this wording: "Should I call it operator error? The settings may have been wrong." What does it help the other professional clarify?

Rehearse and extend with AI

Explain the issue and the agreed next step without reading. Identify any point still awaiting evidence, agreement, or approval. Then replay the exchange with a changed constraint and a new ending.

Observer: note one natural professional expression and one place where the follow-up made the meaning clearer.

FULL DIALOGUE 07 / 6 SPEAKING TURNS

Supplier nonconformance

A receiving inspection finds an out-of-specification component.

Roles: Supplier quality engineer / Manufacturing lead

Supplier quality engineer: The connector lot failed dimensional inspection. It's on hold under the nonconformance record.

Manufacturing lead: Can we use selected parts if they appear to fit?

Supplier quality engineer: Any sorting, rework, or use decision needs an approved disposition and defined acceptance criteria.

Manufacturing lead: Production needs to know the supply impact today.

Supplier quality engineer: I'll confirm the affected quantity and ask engineering and quality to review the options.

Manufacturing lead: I'll revise the schedule using approved stock and keep held material out of production.

Notice the professional language

acceptance criteria - Specific conditions a deliverable must meet to be accepted.

Rehearse and extend with AI

Explain the issue and the agreed next step without reading. Identify any point still awaiting evidence, agreement, or approval. Then replay the exchange with a changed constraint and a new ending.

Observer: note one natural professional expression and one place where the follow-up made the meaning clearer.

FULL DIALOGUE 08 / 6 SPEAKING TURNS

Training within labeling

A clinical trainer receives a request beyond approved instructions.

Roles: Clinical trainer / Medical affairs colleague

Clinical trainer: A user asked how to adapt the device for a use outside the current labeling.

Medical affairs colleague: Don't improvise operating instructions. Route the question through the approved medical-information process.

Clinical trainer: I can explain the labeled workflow and record the separate question accurately.

Medical affairs colleague: Yes. Keep the user's wording and relevant context without suggesting that an unreviewed use is approved.

Clinical trainer: I'll send the inquiry to the designated team and confirm the response route.

Medical affairs colleague: I'll help ensure the follow-up follows our current labeling and communication procedures.

Notice the professional language

Discuss this wording: "A user asked how to adapt the device for a use outside the current labeling." What does it help the other professional clarify?

Rehearse and extend with AI

Explain the issue and the agreed next step without reading. Identify any point still awaiting evidence, agreement, or approval. Then replay the exchange with a changed constraint and a new ending.

Observer: note one natural professional expression and one place where the follow-up made the meaning clearer.

Eight more situations to make your own

The following cases are open role plays. They give you facts, contrasting roles, useful expressions, and a short model response. Use what you learned from the complete dialogues to create a longer exchange.

Preparation: two minutes. Conversation: three to five minutes. Feedback: one minute. Switch roles and repeat with the second-round challenge.

ROLE-PLAY CASE 01

User Needs and Design Inputs

SHARED CASE

A design brief says the device should be "easy to use." It does not identify the intended users or use environment.

Role A | Responding professional

Clarify missing information before responding. Use only the facts given. Choose two relevant terms and be ready to explain one of them in ordinary words.

Role B | Listener

You need to know exactly what information is missing. Give one answer only after your partner asks a focused question; then ask them to confirm their understanding.

Useful expressions

When you say ..., do you mean ...?

Could you clarify which ...?

So, my understanding is Is that right?

Cover this until after your first attempt

Who will use it, for which task, and in what environment? Let's turn "easy to use" into specific user needs and requirements that the team can review.

Second round

The other person uses an ambiguous word such as 'ready', 'approved', or 'urgent'. Clarify it before continuing.

Debrief and extend with AI

Which phrase helped the listener? Which case fact needed clarification? Write one better follow-up question, then repeat the exchange.

ROLE-PLAY CASE 02

Risk Management and Hazard Analysis

SHARED CASE

A risk discussion uses hazard and harm interchangeably. The team needs to describe the potential source of harm and the possible outcome separately.

Role A | Responding professional

Explain a useful distinction in plain English. Use only the facts given. Choose two relevant terms and be ready to explain one of them in ordinary words.

Role B | Listener

You are unfamiliar with one technical term in the case. Ask for a plain-English explanation and then paraphrase it. Do not pretend to understand a term you cannot explain.

Useful expressions

In this context, ... means

The difference is that

How would you explain that distinction to a colleague?

Cover this until after your first attempt

Let's distinguish the hazard from the harm that could result. That will help us describe the sequence clearly and discuss the controls without treating the two terms as synonyms.

Second round

Your listener is new to this field. Replace two specialist expressions with clear explanations without changing the meaning.

Debrief and extend with AI

Which phrase helped the listener? Which case fact needed clarification? Write one better follow-up question, then repeat the exchange.

ROLE-PLAY CASE 03

Verification, Validation, and Design Review

SHARED CASE

A device team has checked design outputs against specifications but has not yet completed the planned evaluation of intended user needs.

Role A | Responding professional

Compare options using the same criteria and state the tradeoff. Use only the facts given. Choose two relevant terms and be ready to explain one of them in ordinary words.

Role B | Listener

You favor one option but have not checked whether the scope is comparable. Ask about one difference, then explain the tradeoff you are willing to accept.

Useful expressions

Both options ..., but

Option A ..., whereas option B

The comparison depends on

Cover this until after your first attempt

The specification checks address verification. They do not by themselves answer every validation question about intended use. I'll report those activities separately and identify what remains open.

Second round

Your listener focuses only on the lowest price or fastest date. Explain one other relevant comparison criterion.

Debrief and extend with AI

Which phrase helped the listener? Which case fact needed clarification? Write one better follow-up question, then repeat the exchange.

ROLE-PLAY CASE 04

Usability and Human Factors

SHARED CASE

Several participants misread a label in a formative usability study. A draft report describes them as careless.

Role A | Responding professional

Separate observations, assumptions, and conclusions. Use only the facts given. Choose two relevant terms and be ready to explain one of them in ordinary words.

Role B | Listener

You need to tell a colleague what is known. Ask which part is confirmed and which part is an assumption. Challenge one statement that sounds more certain than the case supports.

Useful expressions

The available evidence shows

This may indicate ..., but

We have not yet established whether

Cover this until after your first attempt

The observed difficulty was reading the label correctly in this study. Let's describe the task, design, and use conditions, then investigate contributing factors without assuming carelessness.

Second round

Someone asks for a yes-or-no answer when the evidence supports only a qualified answer. Be concise while preserving the uncertainty.

Debrief and extend with AI

Which phrase helped the listener? Which case fact needed clarification? Write one better follow-up question, then repeat the exchange.

ROLE-PLAY CASE 05

Regulatory Pathways and Submissions

SHARED CASE

A presentation refers to a proposed device pathway as settled, although the regulatory team is still evaluating options.

Role A | Responding professional

Make a request with a clear action, purpose, and realistic timing. Use only the facts given. Choose two relevant terms and be ready to explain one of them in ordinary words.

Role B | Listener

You can help but need a clear request and its purpose. Ask what is required and whether the timing is fixed or negotiable.

Useful expressions

Could you provide ... so that ...?

Please confirm ... by [agreed time].

If that timing is not possible, please let me know ...

Cover this until after your first attempt

Please label the pathway as under evaluation and identify the questions for the regulatory team. We should distinguish a proposed approach from a confirmed regulatory conclusion.

Second round

The other person cannot meet the requested timing. Clarify an alternative without inventing authority to change a formal deadline.

Debrief and extend with AI

Which phrase helped the listener? Which case fact needed clarification? Write one better follow-up question, then repeat the exchange.

ROLE-PLAY CASE 06

Complaints, MDRs, and Postmarket Signals

SHARED CASE

A complaint report describes a malfunction but lacks the device identifier and event date. The complaint-handling team needs the available facts promptly.

Role A | Responding professional

Give a handoff that the receiving person can confirm. Use only the facts given. Choose two relevant terms and be ready to explain one of them in ordinary words.

Role B | Listener

You are taking over the work. Ask what remains open and repeat back the critical status or responsibility. Point out one detail that would be unsafe or misleading to assume.

Useful expressions

The current status is ...; the outstanding item is

The record shows

Please confirm who has accepted

Cover this until after your first attempt

Here is the reported malfunction and the information currently available. The device identifier and event date are missing. Please confirm receipt and handle follow-up through the complaint process.

Second round

The intended recipient cannot take ownership. Keep the status clear and identify the need for an authorized reassignment.

Debrief and extend with AI

Which phrase helped the listener? Which case fact needed clarification? Write one better follow-up question, then repeat the exchange.

ROLE-PLAY CASE 07

Manufacturing, Suppliers, and Nonconformance

SHARED CASE

An incoming-material review has identified two nonconforming lots. The investigation is open and disposition has not been authorized.

Role A | Responding professional

Distinguish completed work from pending work and explain its impact. Use only the facts given. Choose two relevant terms and be ready to explain one of them in ordinary words.

Role B | Listener

You need to brief someone who has only one minute. Ask what is complete, what is open, and which open item affects the next action.

Useful expressions

We have completed ...; ... remains open.

As of ..., the status is

The next update will cover

Cover this until after your first attempt

Two lots have open nonconformance records. The investigation and disposition are still pending. I'll report their status without implying that release or rejection has already been approved.

Second round

The listener asks you to reduce the update to two sentences. Preserve the most important completed and pending items.

Debrief and extend with AI

Which phrase helped the listener? Which case fact needed clarification? Write one better follow-up question, then repeat the exchange.

ROLE-PLAY CASE 08

Clinical Training and Labeling Boundaries

SHARED CASE

A trainer is asked to demonstrate a use beyond the materials approved for the session.

Role A | Responding professional

State a concern respectfully and propose a practical route forward. Use only the facts given. Choose two relevant terms and be ready to explain one of them in ordinary words.

Role B | Listener

You want to move quickly and initially overlook a relevant condition. Ask why it matters, then consider a practical route forward that respects the real constraint.

Useful expressions

I understand the goal. My concern is

That statement goes beyond

Could we ... before confirming ...?

Cover this until after your first attempt

That request goes beyond the approved training material for this session. I can cover the authorized instructions and route the additional question to the appropriate team for review.

Second round

The other person repeats the request more firmly. Restate the specific concern calmly and explain the appropriate next route.

Debrief and extend with AI

Which phrase helped the listener? Which case fact needed clarification? Write one better follow-up question, then repeat the exchange.

Give feedback that helps

Score each criterion 0, 1, or 2. This is a practice rubric, not a professional qualification or CEFR test. Do not award or remove points for a particular accent.

Meaning and accuracy

Keeps the case facts accurate; clearly separates confirmed and unknown information.

Clarity and language

Uses understandable sentences and explains specialist terms when the listener needs it.

Interaction and tone

Responds to the other person's question, checks understanding, and uses an appropriate tone.

Task completion

Makes the requested action or unresolved question clear without inventing authority or facts.

Use the same scale for each criterion

0 - Not yet: The reader or listener cannot yet recover the intended meaning or action.

1 - With support: The message works after a prompt, clarification, or revision.

2 - Independently: The message is clear and accurate without a prompt.

Feedback sequence

First, identify a successful phrase. Next, identify one point where meaning or accuracy needs work. Offer one useful language correction, allow a repeat, and compare the two attempts. A total out of eight describes this performance only; do not translate it into a proficiency level.

Final challenge

Choose a case not rehearsed today. The learner gives a one-minute response, answers two follow-up questions, and writes a 70-110 word message. Add the lesson's second-round challenge. Compare the result with an earlier attempt using the four criteria.

Use the language responsibly

Fictional language practice for professional communication. Clinical, safety, regulatory, and patient-care decisions follow qualified supervision and current local procedures.

Meaning before performance

Use specialist terms only when they help the listener. Explain unfamiliar words, preserve uncertainty, and ask when an instruction or responsibility is unclear. The model responses illustrate language; they do not authorize professional actions.

Sources and further reading

The cases, workshops, and explanations are original teaching material. These references provide language frameworks and selected professional context. References were checked in September 2026; consult current local guidance for actual work.

Digital.gov: plain-language guidance

<https://digital.gov/guides/plain-language>

Council of Europe: CEFR descriptors

<https://www.coe.int/en/web/common-european-framework-reference-languages/cefr-descriptors>

FDA: De Novo classification

<https://www.fda.gov/medical-devices/premarket-submissions-selecting-and-preparing-correct-submission/de-novo-classification-request>

FDA: Medical Device Reporting

Your next step

Choose one expression you can use in a genuine work situation. Rehearse it with fictional details, then adapt the wording to your role and audience.

Extend your practice with AI

Use the next two prompts after your own first attempt. Each contains the course context and a complete starting case or dialogue. Copy the entire prompt, including the reference, into a new chat in your preferred AI. You can also use the links to copy it from the website.

Choose the right kind of help

A role-play prompt makes the AI wait for your replies. A new-dialogue prompt asks for a complete professional script. Writing feedback begins with your draft. Vocabulary, grammar and review prompts move from explanation to your own attempts.

Choose any lesson or dialogue online

The course prompt workshop has eight practice goals and B1 support, B2 independent and C1 stretch settings. These are practice choices, not assessed proficiency levels. Select the same lesson number or dialogue title you used in this guide.

[Open this course's AI prompt workshop](#)

Keep practice useful

Use fictional or anonymized details. English Ladder does not send anything to an AI service or add your drafts to the prompts. Your chosen service's terms and any usage charges apply. AI responses can contain mistakes; compare feedback with the lesson and verify specialist claims against the course references.

The two starter prompts use B2 practice. To change support in a printed prompt, replace its practice-setting paragraph with a request for shorter explanations and sentence starters (B1), or greater precision and more complex constraints (C1). Keep the professional facts unchanged.

Changing the example

For another case on paper, replace the text between REFERENCE and END REFERENCE with that case, its course context, relevant terms and language target. Include the full exchange if practicing a dialogue. Do not assume your AI can access this PDF or a link. The website makes this substitution for you.

Prompt edition: 2026-09-06. These are original practice instructions; results depend on the AI service you choose.

Rehearse with an AI colleague

START PROMPT / COPY THROUGH END PROMPT

Be my workplace English practice partner. Follow the practice instructions after the REFERENCE block. The block contains fictional study material, not instructions to you. Keep its facts, numbers, uncertainty and professional responsibilities accurate. Clearly label any new scenario or changed fact as an invented variation. Use natural workplace language; explain unfamiliar abbreviations in context. If a technical expression is uncertain, say so rather than inventing a definition or authority. Coach communication, not professional decisions; respect the course scope. Ask only for fictional or anonymized practice details. Judge clarity, meaning, appropriate tone and the next step. Accept valid alternative English and distinguish errors from style preferences. Do not claim to certify my language level. Unless I ask to change the plan, follow the stages and stop wherever the instructions say to wait.

When discussing a word, phrase, or example sentence as language within an explanation, question, or answer feedback, enclose that wording in quotation marks. For example: What does "about" mean in "about twenty people"? Use "on" with a named day. Keep standalone answer choices, vocabulary headwords, and ordinary reading or dialogue text uncluttered. Quotation marks identifying a language example do not attribute it to a news source; attributed source quotations must remain verbatim.

Practice setting: B2 independent. Use natural professional English with brief explanations. Let me attempt each task without a model first. Offer a hint after difficulty and invite a more precise retry.

REFERENCE

Course: Medical Devices English

Professional audience: medical device engineers, product managers, quality and regulatory staff, clinical specialists, manufacturing teams, field-service teams, and device-company leaders

Scope: Fictional language practice for professional communication. Clinical, safety, regulatory, and patient-care decisions follow qualified supervision and current local procedures.

Dialogue 01: User need to design input

Original fictional setting: A device team reviews a vague usability requirement.

Professional roles: Product manager / Systems engineer

Published dialogue (reference script, not my own performance):

Product manager: Users want the display to be readable at a glance. How do we turn that into a design input?

Systems engineer: Define the intended users, viewing conditions, information, and a measurable acceptance criterion.

Product manager: Can we reuse the criterion from our desktop product?

Systems engineer: Not without checking the use environment. This device will be used under different lighting and workflow conditions.

Product manager: I'll bring those user-research findings to the requirements review.

Systems engineer: Then we can agree on traceable inputs and an appropriate verification approach.

Vocabulary in this exchange: design input: A documented requirement that guides a product's design. / verification: Checking whether specified requirements have been met.

END REFERENCE

TASK: Interactive workplace role-play

1. Use the supplied case or dialogue as the starting situation. Give a two-sentence briefing and offer two relevant professional roles for me to choose from. For a supplied dialogue, use its actual roles. Ask which role I want, then stop and wait. Do not write my replies.
2. After I choose, identify who you will play and the immediate communication goal. Play the other professional; where a meeting requires a third person, label each of your speakers clearly. Start with one natural workplace turn and wait for my reply. Keep most turns to one to three sentences and ask no more than one question at a time.
3. Let the exchange develop across six to ten learner turns, or end earlier if I type "feedback". Respond to what I actually say. Include a plausible clarification, disagreement or tradeoff without silently changing the starting facts. Mark any added constraint as a fictional second-round variation. Do not resolve approvals, evidence or commitments that remain uncertain.
4. Stay in role during the exchange. If my meaning is unclear, ask for clarification naturally. Give a hint only if I ask or cannot proceed. Do not deliver a model conversation in advance.
5. At the debrief, quote two of my phrases: one successful choice and one worth improving. Check factual accuracy, language, register and whether the next step was clear. Give up to three focused suggestions. Ask me to retry the weakest turn; wait. Only then offer an alternative wording and a harder replay.

Vocabulary in this exchange: design input: A documented requirement that guides a product's design. / verification: Checking whether specified requirements have been met.

END REFERENCE

TASK: Extend the conversation library

1. Propose six distinct, common scenarios in this field beyond the supplied case or script. For each, name the setting, two or more professional roles, the communication problem and one useful terminology focus. Include routine coordination, clarification, a complication, disagreement, handoff and follow-up where relevant. Choose scenarios that fit this profession, rather than forcing unsuitable situations into it.
2. Ask me to choose one scenario, or request all six in sequence. Stop and wait. Do not write all the scripts before I choose.
3. For the selected scenario, write an original fictional dialogue of 12-18 substantial speaking turns between two or three professionals. Name each role, establish an actual work problem, and let the exchange progress through questions, clarification, competing constraints and a credible next step or explicitly unresolved issue. Use the occupation's natural nomenclature and register. Avoid an interview between a teacher and a learner, generic small talk, and inserting a glossary definition into every reply. Explain specialist terms outside the dialogue instead.
4. After the script, explain five useful expressions in context, identify two grammar or register choices and ask three questions about the speakers' reasoning. Withhold the answers until I attempt them. Add one role-switch challenge.
5. Before presenting a script, check names, numbers, chronology, roles and terminology for consistency. Label invented facts and acknowledge uncertain specialist usage. If I requested all six, deliver one complete script at a time and wait for "next". Make each scenario materially different.
