

English Ladder

Teaching Guide

Sensory Terms

A concise classroom guide with lesson flow, teaching cues, and a ready-to-use answer key built around the same English Ladder concept sheet.

Grammar Concepts #39

Key Points

3. Additional Examples for Clarification

Conclusion

Visual anchor

Use the concept poster to spotlight the main language pattern in **Sensory Terms** and keep the explanation visible during practice and discussion.

ENGLISH LADDER

Concept #39 ▶

Look at | Watch | Hear | Listen to

	Not Intentional	Intentional
No Movement	I saw the dead dog.	I saw the painting. I <u>looked at</u> the painting.
Movement	I saw Tom fall down.	I saw the movie. I <u>watched</u> the movie.
Ouch!	The word "<u>see</u>" is flexible. However, the four other terms are not.	
	I <u>heard</u> Tom's voice.	I <u>listened to</u> Tom complain about his bad luck.

At a Glance

Lesson focus Sensory Terms	Suggested timing 45-60 minutes
Core objective Students explain the target pattern clearly and apply it accurately in controlled practice and discussion.	Materials Student PDF, the concept image, board space, and time for partner checking.

Suggested Lesson Flow

Warm-up

Display the concept image and ask learners to predict the rule behind **Sensory Terms** before reading the explanation.

Model

Walk through the Core Idea and the sections on Key Points, 3. Additional Examples for Clarification, Conclusion. Pause after each part so students can restate the pattern in plain English.

Guided practice

Project two or three examples from the concept sheet and ask pairs to explain why each choice works, not just what the answer is.

Independent work

Assign the 24 practice items for quiet work, partner checking, and final feedback.

Closure

Ask students to create one new sentence or mini-example of their own that follows the same pattern.

Likely Learner Errors

- Learners may overgeneralize the first pattern they notice. Keep returning to **Key Points, 3. Additional Examples for Clarification, Conclusion** and ask students to explain what changes from one example to the next.
- Long explanations can hide the signal word or structure. Have students underline the exact phrase that tells them which form, pattern, or response is needed.
- If students can choose an answer but cannot explain it, ask them to justify their choice using words taken directly from the concept sheet.

Differentiation and Delivery Notes

- Support: teach one section at a time, then send students back to **the examples** or the practice set so they can apply the same rule immediately.
- Pair work: let students compare answers aloud before you reveal the key. The explanation step is as important as the final answer.
- Extension: ask stronger students to write two fresh examples or a short dialogue that uses the same target language accurately.

Model Language from the Concept Sheet

- Definition: The verb "look at" implies a deliberate action where the subject directs their eyes toward an object or scene....
- Context: Typically used when the object is stationary or when the focus is on observing details rather than tracking movement.
- Intentionality: High (the action is performed intentionally).
- Examples: "I looked at the painting." (The focus is on the stationary painting.) "She looked at the clock to check the time." (A deliberate act of checking the time.) "Please look at this document and let me know your thoughts." (The action of reading or reviewing.)
- Definition: The verb "watch" also implies intentionality, but it is used when the object or scene involves movement or when the subject is engaged in continuous observation over time.
- Context: Commonly used when the subject of observation is in motion or when there is a progression of events.

Answer Key

Use this key for whole-class feedback or fast marking.

Item 01 b) ****saw****. We use "saw" to describe the experience of attending an event like a concert. "Watched" would imply more focused, ongoing observation, "looked at" suggests focusing on something stationary, and "listened" relates to auditory experiences.

Item 02 b) ****watched****. "Watched" is correct because it implies observing something over a period of time, especially when movement is involved. "Looked at" would not typically involve movement, "saw" is more general, and "listened to" is related to sound, not sight.

Item 03 c) ****looked at****. "Looked at" is used for focusing on a stationary object like a painting. "Saw" is too general, "listened to" and "heard" are about auditory perception, which isn't relevant here.

Item 04 a) ****watched****. "Watched" is correct as it implies observing a series of events over time, like a fireworks display. "Saw" might be used, but it doesn't emphasize the duration, and the other options are unrelated to visual observation.

Item 05 c) ****hear****. "Hear" is used for perceiving sound. The other options all involve visual perception, which doesn't apply to a noise.

Item 06 b) ****listened to****. "Listened to" is correct as it involves focusing on auditory content, like music. "Watched" and "looked at" refer to visual perception, and "saw" is too general.

Item 07 a) ****saw****. "Saw" is correct because it describes perceiving an event visually. "Watched" implies deliberate observation, "listened to" and "heard" relate to sound, not sight.

Item 08 b) ****watches****. "Watches" is correct because it implies deliberate, continuous observation, suitable for TV news. The other options either do not convey the ongoing nature or relate to auditory perception.

Item 09 c) ****saw****. "Saw" is appropriate because it indicates noticing something without necessarily focusing on it. "Looked at" suggests deliberate attention, which isn't implied here, and the other options are incorrect.

Item 10 c) ****listened to****. "Listened to" is correct because it involves focusing on auditory content. The other options relate to visual perception, which is not the main focus here.

Item 11 c) ****heard****. "Heard" is correct because it relates to perceiving sound without seeing the source. The other options are incorrect because they all relate to visual perception.

Item 12 b) ****looked at****. "Looked at" is correct as it implies focusing on something stationary, like stars. "Watched" typically involves movement or change, and the other options are unrelated.

Item 13 c) ****heard****. "Heard" is appropriate because the sentence focuses on perceiving sound. The other options all relate to visual perception, which doesn't fit here.

Item 14 b) **heard.** "Heard" is correct because it describes perceiving a sound, which fits the context of a dark alley where visibility might be low. The other options involve visual perception, which is not relevant here.

Item 15 b) **watched.** "Watched" is correct because it implies observing a gradual event like a sunrise. "Saw" is too general and doesn't emphasize the duration of the observation. The other options are unrelated.

Item 16 c) **listened to.** "Listened to" is correct because it involves focusing on auditory content, like a radio broadcast. The other options are about visual perception.

Item 17 c) **watched.** "Watched" is correct because it suggests ongoing observation of the moving waves. "Looked at" is less appropriate because it doesn't imply sustained observation, and the other options relate to sound.

Item 18 a) **saw.** "Saw" is correct because it refers to the experience of attending an event or exhibition. The other options are either more specific or unrelated to this context.

Item 19 d) **saw.** "Saw" is correct because it refers to noticing something visually. The other options do not fit the context of noticing a photo.

Item 20 a) **watched.** "Watched" is correct because it involves observing moving images over time, which is typical for a documentary. The other options do not convey the correct meaning.

Item 21 c) **listened to.** "Listened to" is correct because it implies focusing on auditory content, like instructions. The other options relate to visual perception, which is not the focus here.

Item 22 d) **saw.** "Saw" is correct because it describes a visual observation. The other options either suggest deliberate focus or relate to sound, which isn't implied here.

Item 23 c) **watched.** "Watched" is correct because it implies observing the storm's movement over time. The other options either do not convey sustained observation or are unrelated.

Item 24 d) **listened to.** "Listened to" is correct because it involves focusing on auditory content, like a speech. The other options relate to visual perception, which is not relevant here.
