

ENGLISH FOR WORK / SEPTEMBER 2026

Higher Education and Research English

Teacher's guide

Teach practical workplace communication with specific cases, clear language targets, and a repeatable feedback process.

PRACTICE THAT TRANSFERS TO WORK

Read a realistic case. Find the right language. Speak, write, get feedback, and try again.

Eight lessons | Intermediate to advanced | Independent or classroom study

For faculty, postdoctoral researchers, graduate students, lab managers, research administrators, grant staff, ethics-board coordinators, and academic program leaders.

All cases and figures are fictional. Adapt the language to your role and organization's current procedures, using invented details for practice.

All scenarios, figures, and model responses are fictional teaching material. Use invented details in practice.

Your course at a glance

Use the lesson numbers to match this document with the website and the other guides.

01 Research Questions and Study Design

Clarify missing information before responding.

02 Grant Proposals and Specific Aims

Separate observations, assumptions, and conclusions.

03 Lab Meetings and Data Challenges

Make a request with a clear action, purpose, and realistic timing.

04 Research Ethics and Human Subjects

Clarify missing information before responding.

05 Authorship, Collaboration, and Credit

Include relevant voices and clarify the decision process.

06 Peer Review and Revision Responses

Acknowledge a communication problem and give a corrected message.

07 Data Management and Reproducibility

Make a request with a clear action, purpose, and realistic timing.

08 Academic Presentations and Conferences

Separate observations, assumptions, and conclusions.

Choose your pace

Quick practice: spend 15 minutes reading one case and saying a response. Full lesson: allow 45-60 minutes for language work, conversation, writing, and revision.

Level support

B1 learners can use the frames and a partner. B2 learners can try a response before reading the model. C1 learners can add the harder follow-up and reduce preparation time. These are teaching suggestions, not certified CEFR level ratings.

A 60-minute lesson that works

Prepare the case and the learner pages. Keep the model response hidden until learners have attempted their own. Choose two field terms that are important to understanding the case.

0-5 minutes | Activate experience

Ask learners to name a comparable situation without sharing confidential details. Introduce the communication goal.

5-12 minutes | Read and sort facts

Read the case. Learners identify confirmed facts, unknowns, the audience, and the immediate communication need.

12-22 minutes | Notice and practice language

Explain the workshop pattern. Work through the vocabulary and editing example, then discuss both language checks and the reasons behind the choices.

22-35 minutes | Speak and respond

Give two minutes of preparation. Run the partner exchange, switch roles, and add the follow-up challenge. Observe whether the listener can act on the message.

35-47 minutes | Write for a real reader

Learners write the short message using only case facts. Partners check clarity, certainty, and the requested next step.

47-55 minutes | Compare and revise

Reveal the model. Discuss alternative acceptable wording. Give one meaning correction and one language correction, then repeat.

55-60 minutes | Retrieve and transfer

Close the materials. Learners recall two expressions and identify one communication habit to use in another situation.

Adapt the session

For 45 minutes, shorten the first conversation and assign writing for follow-up. For 90 minutes, add 15 minutes for a second case and 15 minutes for the final challenge. More time should produce more meaningful practice, not longer explanations.

LESSON 01 / FACILITATOR NOTES

Research Questions and Study Design

Clarify missing information before responding.

CASE

A research proposal asks whether a program "works" without specifying the outcome or population.

Teach this move

Name the exact word, fact, or requirement you need clarified. Ask one focused question at a time. Repeat your understanding and give the other person a chance to correct it.

Vocabulary to check: research question, hypothesis, methodology, limitation.

Model response

What outcome would count as improvement, for whom, and over what period? A clearer research question will help us choose an appropriate design and describe its limits.

Listen for, then coach

Ask learners to point to the case fact behind each important statement. Accept different wording when it preserves meaning, fits the listener, and does not invent an outcome. After an introductory phrase such as 'Could you explain', the embedded question uses statement word order: what this means.

Second-round challenge

The other person uses an ambiguous word such as 'ready', 'approved', or 'urgent'. Clarify it before continuing.

Language-check answers

1. A - Could you confirm when the review starts? The embedded question uses subject then verb: the review starts.
2. C - Has the report been approved, or is it ready for review? This question distinguishes two meanings of 'ready' that affect the next action.

LESSON 02 / FACILITATOR NOTES

Grant Proposals and Specific Aims

Separate observations, assumptions, and conclusions.

CASE

A grant draft promises to solve a broad scientific problem using a small pilot study.

Teach this move

Say what the evidence shows, identify what is still unknown, and limit the conclusion to that evidence. Words such as 'may', 'suggests', and 'in this sample' are useful when the uncertainty is real. Do not soften an urgent, verified safety concern.

Vocabulary to check: specific aims, significance, innovation, feasibility.

Model response

The pilot can test feasibility and provide preliminary evidence. It cannot resolve the entire problem. I'll narrow the aim so the proposed work and the claim match.

Listen for, then coach

Ask learners to point to the case fact behind each important statement. Accept different wording when it preserves meaning, fits the listener, and does not invent an outcome. The revision states the finding and its scope. It avoids turning limited evidence into a universal claim.

Second-round challenge

Someone asks for a yes-or-no answer when the evidence supports only a qualified answer. Be concise while preserving the uncertainty.

Language-check answers

1. C - The change may have contributed to the delay. 'May have contributed' presents a possibility without claiming the cause is established.
2. B - In this pilot, the observed result was ... This locates the finding in the setting actually studied.

LESSON 03 / FACILITATOR NOTES

Lab Meetings and Data Challenges

Make a request with a clear action, purpose, and realistic timing.

CASE

A result differs from an earlier experiment, but the lab notes omit a protocol change.

Teach this move

State the action and the information needed. Explain why it matters and specify a deadline only when one is given or agreed. 'Could you' is polite; repeated apologies can obscure a legitimate request. Urgent situations may require a direct request.

Vocabulary to check: control, replication, protocol drift, analysis assumption.

Model response

Could we compare the protocol versions and recorded conditions? Please add the missing change to the record so the team can assess possible explanations for the difference.

Listen for, then coach

Ask learners to point to the case fact behind each important statement. Accept different wording when it preserves meaning, fits the listener, and does not invent an outcome. The revision names the document and requested response. It avoids expressions that may be unfamiliar or ambiguous for an international audience.

Second-round challenge

The other person cannot meet the requested timing. Clarify an alternative without inventing authority to change a formal deadline.

Language-check answers

1. B - Send it no later than Thursday. 'By' sets the latest point, while 'after' refers to a later time.
2. A - Could you confirm the document version needed for the review? The requested action and information are explicit.

LESSON 04 / FACILITATOR NOTES

Research Ethics and Human Subjects

Clarify missing information before responding.

CASE

A researcher wants to reuse participant data for a new question. The existing approval and consent materials have not been reviewed.

Teach this move

Name the exact word, fact, or requirement you need clarified. Ask one focused question at a time. Repeat your understanding and give the other person a chance to correct it.

Vocabulary to check: IRB, informed consent, secondary use, human subjects.

Model response

Does the proposed use fall within the relevant approval and consent arrangements?
Let's check with the appropriate ethics and data-governance processes before assuming reuse is permitted.

Listen for, then coach

Ask learners to point to the case fact behind each important statement. Accept different wording when it preserves meaning, fits the listener, and does not invent an outcome. After an introductory phrase such as 'Could you explain', the embedded question uses statement word order: what this means.

Second-round challenge

The other person uses an ambiguous word such as 'ready', 'approved', or 'urgent'. Clarify it before continuing.

Language-check answers

1. A - Could you confirm when the review starts? The embedded question uses subject then verb: the review starts.
2. C - Has the report been approved, or is it ready for review? This question distinguishes two meanings of 'ready' that affect the next action.

LESSON 05 / FACILITATOR NOTES

Authorship, Collaboration, and Credit

Include relevant voices and clarify the decision process.

CASE

Collaborators disagree about authorship late in a project. Their contributions and expectations have not been discussed together.

Teach this move

Summarize the issue neutrally, invite missing perspectives, and distinguish discussion from decision. State who can decide and record any unresolved question. Do not assume silence means agreement.

Vocabulary to check: authorship, contribution, corresponding author, acknowledgment.

Model response

Could we document each contribution and review the applicable authorship criteria as a group? That will give us a clearer basis for the discussion than relying on assumptions about rank or effort.

Listen for, then coach

Ask learners to point to the case fact behind each important statement. Accept different wording when it preserves meaning, fits the listener, and does not invent an outcome. The revised question gives people a way to raise a concern. Silence can have several meanings, especially in unfamiliar or unequal-power situations.

Second-round challenge

A participant interrupts or the meeting is running out of time. Protect a turn to speak and close with an accurate decision record.

Language-check answers

1. C - We haven't heard from the remote team yet; what is your view? It invites participation without interpreting silence as consent.
2. B - Approval is pending; the sponsor will review the two options. This distinguishes discussion from approval and identifies the next reviewer.

LESSON 06 / FACILITATOR NOTES

Peer Review and Revision Responses

Acknowledge a communication problem and give a corrected message.

CASE

A reviewer points out that a manuscript's claim goes beyond its sample. The authors agree that the wording needs revision.

Teach this move

Name what was unclear or wrong, acknowledge its effect, and correct it. A brief apology can help, followed by a practical next step. Avoid explaining away the other person's reaction or promising an outcome you cannot control.

Vocabulary to check: peer review, major revision, response letter, scope.

Model response

Thank you for identifying this limitation. We have narrowed the claim to the studied sample and added a discussion of generalizability. The response should point the reviewer to the revised passage.

Listen for, then coach

Ask learners to point to the case fact behind each important statement. Accept different wording when it preserves meaning, fits the listener, and does not invent an outcome. The revision takes responsibility for the message without blaming the listener. It identifies what needs to be corrected.

Second-round challenge

The listener remains disappointed after the correction. Acknowledge the impact and restate the available next step calmly.

Language-check answers

1. B - I'm sorry my earlier wording was unclear. This acknowledges the speaker's contribution to the problem.
2. A - The corrected date and the current confirmation status. A repair needs usable corrected information, including any uncertainty.

LESSON 07 / FACILITATOR NOTES

Data Management and Reproducibility

Make a request with a clear action, purpose, and realistic timing.

CASE

A shared dataset has variable names but no description of units, missing values, or collection dates.

Teach this move

State the action and the information needed. Explain why it matters and specify a deadline only when one is given or agreed. 'Could you' is polite; repeated apologies can obscure a legitimate request. Urgent situations may require a direct request.

Vocabulary to check: metadata, repository, provenance, reproducibility.

Model response

Could you add a data dictionary covering units, missing-value codes, and collection dates? Those details will help another researcher interpret and reuse the data correctly.

Listen for, then coach

Ask learners to point to the case fact behind each important statement. Accept different wording when it preserves meaning, fits the listener, and does not invent an outcome. The revision names the document and requested response. It avoids expressions that may be unfamiliar or ambiguous for an international audience.

Second-round challenge

The other person cannot meet the requested timing. Clarify an alternative without inventing authority to change a formal deadline.

Language-check answers

1. A - Send it no later than Thursday. 'By' sets the latest point, while 'after' refers to a later time.
2. C - Could you confirm the document version needed for the review? The requested action and information are explicit.

LESSON 08 / FACILITATOR NOTES

Academic Presentations and Conferences

Separate observations, assumptions, and conclusions.

CASE

An audience member asks whether a small study proves a general theory. The presenter needs a concise answer.

Teach this move

Say what the evidence shows, identify what is still unknown, and limit the conclusion to that evidence. Words such as 'may', 'suggests', and 'in this sample' are useful when the uncertainty is real. Do not soften an urgent, verified safety concern.

Vocabulary to check: generalizability, limitation, future work, conference Q&A.

Model response

The study offers evidence relevant to the theory under these conditions. It does not establish the theory in every setting. A useful next step would test whether the finding holds in a broader sample.

Listen for, then coach

Ask learners to point to the case fact behind each important statement. Accept different wording when it preserves meaning, fits the listener, and does not invent an outcome. The revision states the finding and its scope. It avoids turning limited evidence into a universal claim.

Second-round challenge

Someone asks for a yes-or-no answer when the evidence supports only a qualified answer. Be concise while preserving the uncertainty.

Language-check answers

1. C - The change may have contributed to the delay. 'May have contributed' presents a possibility without claiming the cause is established.
2. B - In this pilot, the observed result was ... This locates the finding in the setting actually studied.

Give feedback that helps

Score each criterion 0, 1, or 2. This is a practice rubric, not a professional qualification or CEFR test. Do not award or remove points for a particular accent.

Meaning and accuracy

Keeps the case facts accurate; clearly separates confirmed and unknown information.

Clarity and language

Uses understandable sentences and explains specialist terms when the listener needs it.

Interaction and tone

Responds to the other person's question, checks understanding, and uses an appropriate tone.

Task completion

Makes the requested action or unresolved question clear without inventing authority or facts.

Use the same scale for each criterion

0 - Not yet: The reader or listener cannot yet recover the intended meaning or action.

1 - With support: The message works after a prompt, clarification, or revision.

2 - Independently: The message is clear and accurate without a prompt.

Feedback sequence

First, identify a successful phrase. Next, identify one point where meaning or accuracy needs work. Offer one useful language correction, allow a repeat, and compare the two attempts. A total out of eight describes this performance only; do not translate it into a proficiency level.

Final challenge

Choose a case not rehearsed today. The learner gives a one-minute response, answers two follow-up questions, and writes a 70-110 word message. Add the lesson's second-round challenge. Compare the result with an earlier attempt using the four criteria.

Use the language responsibly

All cases and figures are fictional. Adapt the language to your role and organization's current procedures, using invented details for practice.

Meaning before performance

Use specialist terms only when they help the listener. Explain unfamiliar words, preserve uncertainty, and ask when an instruction or responsibility is unclear. The model responses illustrate language; they do not authorize professional actions.

Sources and further reading

The cases, workshops, and explanations are original teaching material. These references provide language frameworks and selected professional context. References were checked in September 2026; consult current local guidance for actual work.
