

ENGLISH FOR WORK / SEPTEMBER 2026

Higher Education and Research English

Learner workbook

Work with realistic cases, develop your own response, and use the answer section after you have tried the tasks.

PRACTICE THAT TRANSFERS TO WORK

Read a realistic case. Find the right language. Speak, write, get feedback, and try again.

Eight lessons | Intermediate to advanced | Independent or classroom study

For faculty, postdoctoral researchers, graduate students, lab managers, research administrators, grant staff, ethics-board coordinators, and academic program leaders.

All cases and figures are fictional. Adapt the language to your role and organization's current procedures, using invented details for practice.

All scenarios, figures, and model responses are fictional teaching material. Use invented details in practice.

[Open this course on English Ladder](#)

Your course at a glance

Use the lesson numbers to match this document with the website and the other guides.

01 Research Questions and Study Design

Clarify missing information before responding.

02 Grant Proposals and Specific Aims

Separate observations, assumptions, and conclusions.

03 Lab Meetings and Data Challenges

Make a request with a clear action, purpose, and realistic timing.

04 Research Ethics and Human Subjects

Clarify missing information before responding.

05 Authorship, Collaboration, and Credit

Include relevant voices and clarify the decision process.

06 Peer Review and Revision Responses

Acknowledge a communication problem and give a corrected message.

07 Data Management and Reproducibility

Make a request with a clear action, purpose, and realistic timing.

08 Academic Presentations and Conferences

Separate observations, assumptions, and conclusions.

Choose your pace

Quick practice: spend 15 minutes reading one case and saying a response. Full lesson: allow 45-60 minutes for language work, conversation, writing, and revision.

Level support

B1 learners can use the frames and a partner. B2 learners can try a response before reading the model. C1 learners can add the harder follow-up and reduce preparation time. These are teaching suggestions, not certified CEFR level ratings.

LESSON 01 / READ AND NOTICE

Research Questions and Study Design

Clarify missing information before responding.

SITUATION

A research proposal asks whether a program "works" without specifying the outcome or population.

1. Understand the situation

Identify two confirmed facts, one missing detail, and the person who needs your response. Do not fill gaps with invented facts.

2. Find the words

research question - The specific question a study is designed to investigate.

hypothesis - A proposed explanation or prediction that can be examined using evidence.

methodology - The methods and reasoning used to conduct a study or analysis.

limitation - A condition that restricts what evidence, work, or a conclusion can establish.

3. Notice the language

Name the exact word, fact, or requirement you need clarified. Ask one focused question at a time. Repeat your understanding and give the other person a chance to correct it.

When you say ..., do you mean ...?

Could you clarify which ...?

So, my understanding is Is that right?

Improve this sentence: Could you explain what does this mean?

LESSON 01 / PRACTICE AND PRODUCE

Ask a precise question

4. Check the language

1. Which indirect question has the usual word order?
 - A. Could you confirm when the review starts?
 - B. Could you confirm when does the review start?
 - C. Could you confirm when starts the review?
2. Someone says the report is 'ready.' Which question best clarifies its approval status?
 - A. Can you send the report to me this afternoon?
 - B. Who will present the report at the meeting?
 - C. Has the report been approved, or is it ready for review?

5. Say it

Prepare for two minutes. Speak for 45-60 seconds using the case facts, then respond to your partner's question. Switch roles and repeat without reading the model response.

Partner: You need to know exactly what information is missing. Give one answer only after your partner asks a focused question; then ask them to confirm their understanding.

6. Write it

Write a 70-110 word message for the person who needs to act on this case. State the purpose, preserve the relevant facts, and make the next action or unresolved question clear. Use a subject line and an appropriate opening. Do not invent a deadline, finding, or approval.

Check: facts accurate | meaning clear | tone appropriate | next action or question explicit

After checking the answer section, revise one sentence and try the spoken response again.

LESSON 02 / READ AND NOTICE

Grant Proposals and Specific Aims

Separate observations, assumptions, and conclusions.

SITUATION

A grant draft promises to solve a broad scientific problem using a small pilot study.

1. Understand the situation

Identify two confirmed facts, one missing detail, and the person who needs your response. Do not fill gaps with invented facts.

2. Find the words

specific aims - The focused objectives a research proposal intends to achieve.

significance - The importance of a question or finding; statistical significance has a separate technical meaning.

innovation - A new or improved approach, product, or process intended to create value.

feasibility - Whether a proposed activity can reasonably be carried out under stated conditions.

3. Notice the language

Say what the evidence shows, identify what is still unknown, and limit the conclusion to that evidence. Words such as 'may', 'suggests', and 'in this sample' are useful when the uncertainty is real. Do not soften an urgent, verified safety concern.

The available evidence shows

This may indicate ..., but

We have not yet established whether

Improve this sentence: The pilot proves this will work everywhere.

LESSON 02 / PRACTICE AND PRODUCE

Match certainty to evidence

4. Check the language

1. Which sentence preserves uncertainty about an unconfirmed cause?
 - A. The change must have caused the delay.
 - B. The change definitely caused the delay.
 - C. The change may have contributed to the delay.
2. A result comes from a small pilot in one location. Which phrase accurately limits the claim?
 - A. Without any uncertainty, the result is ...
 - B. In this pilot, the observed result was ...
 - C. In every location, the result will be ...

5. Say it

Prepare for two minutes. Speak for 45-60 seconds using the case facts, then respond to your partner's question. Switch roles and repeat without reading the model response.

Partner: You need to tell a colleague what is known. Ask which part is confirmed and which part is an assumption. Challenge one statement that sounds more certain than the case supports.

6. Write it

Write a 70-110 word message for the person who needs to act on this case. State the purpose, preserve the relevant facts, and make the next action or unresolved question clear. Use a subject line and an appropriate opening. Do not invent a deadline, finding, or approval.

Check: facts accurate | meaning clear | tone appropriate | next action or question explicit

After checking the answer section, revise one sentence and try the spoken response again.

LESSON 03 / READ AND NOTICE

Lab Meetings and Data Challenges

Make a request with a clear action, purpose, and realistic timing.

SITUATION

A result differs from an earlier experiment, but the lab notes omit a protocol change.

1. Understand the situation

Identify two confirmed facts, one missing detail, and the person who needs your response. Do not fill gaps with invented facts.

2. Find the words

control - A process, approval, check, or technical safeguard designed to reduce risk.

replication - Repeating a study or test to examine whether a finding holds again.

protocol drift - A gradual or unnoticed departure from the planned study or working procedure.

analysis assumption - A condition treated as true for the purpose of an analysis.

3. Notice the language

State the action and the information needed. Explain why it matters and specify a deadline only when one is given or agreed. 'Could you' is polite; repeated apologies can obscure a legitimate request. Urgent situations may require a direct request.

Could you provide ... so that ...?

Please confirm ... by [agreed time].

If that timing is not possible, please let me know

Improve this sentence: Please revert soonest with the necessary.

LESSON 03 / PRACTICE AND PRODUCE

Ask for an actionable next step

4. Check the language

1. What does 'Please send it by Thursday' normally mean?
 - A. Send it on a date later than Thursday.
 - B. Send it no later than Thursday.
 - C. Send it only after Thursday.
2. Which request gives the recipient enough detail to act?
 - A. Could you confirm the document version needed for the review?
 - B. Could you deal with the relevant matters soon?
 - C. Could you do the needful for the situation?

5. Say it

Prepare for two minutes. Speak for 45-60 seconds using the case facts, then respond to your partner's question. Switch roles and repeat without reading the model response.

Partner: You can help but need a clear request and its purpose. Ask what is required and whether the timing is fixed or negotiable.

6. Write it

Write a 70-110 word message for the person who needs to act on this case. State the purpose, preserve the relevant facts, and make the next action or unresolved question clear. Use a subject line and an appropriate opening. Do not invent a deadline, finding, or approval.

Check: facts accurate | meaning clear | tone appropriate | next action or question explicit

After checking the answer section, revise one sentence and try the spoken response again.

LESSON 04 / READ AND NOTICE

Research Ethics and Human Subjects

Clarify missing information before responding.

SITUATION

A researcher wants to reuse participant data for a new question. The existing approval and consent materials have not been reviewed.

1. Understand the situation

Identify two confirmed facts, one missing detail, and the person who needs your response. Do not fill gaps with invented facts.

2. Find the words

IRB - Institutional review board: a body that reviews covered human-subjects research under applicable requirements.

informed consent - A process of providing relevant information and obtaining voluntary agreement under applicable requirements.

secondary use - Use of data or material for a purpose beyond the original collection or primary purpose.

human subjects - People whose participation or identifiable information is involved in research under the applicable definition.

3. Notice the language

Name the exact word, fact, or requirement you need clarified. Ask one focused question at a time. Repeat your understanding and give the other person a chance to correct it.

When you say ..., do you mean ...?

Could you clarify which ...?

So, my understanding is Is that right?

Improve this sentence: Could you explain what does this mean?

LESSON 04 / PRACTICE AND PRODUCE

Ask a precise question

4. Check the language

1. Which indirect question has the usual word order?
 - A. Could you confirm when the review starts?
 - B. Could you confirm when does the review start?
 - C. Could you confirm when starts the review?
2. Someone says the report is 'ready.' Which question best clarifies its approval status?
 - A. Can you send the report to me this afternoon?
 - B. Who will present the report at the meeting?
 - C. Has the report been approved, or is it ready for review?

5. Say it

Prepare for two minutes. Speak for 45-60 seconds using the case facts, then respond to your partner's question. Switch roles and repeat without reading the model response.

Partner: You need to know exactly what information is missing. Give one answer only after your partner asks a focused question; then ask them to confirm their understanding.

6. Write it

Write a 70-110 word message for the person who needs to act on this case. State the purpose, preserve the relevant facts, and make the next action or unresolved question clear. Use a subject line and an appropriate opening. Do not invent a deadline, finding, or approval.

Check: facts accurate | meaning clear | tone appropriate | next action or question explicit

After checking the answer section, revise one sentence and try the spoken response again.

LESSON 05 / READ AND NOTICE

Authorship, Collaboration, and Credit

Include relevant voices and clarify the decision process.

SITUATION

Collaborators disagree about authorship late in a project. Their contributions and expectations have not been discussed together.

1. Understand the situation

Identify two confirmed facts, one missing detail, and the person who needs your response. Do not fill gaps with invented facts.

2. Find the words

authorship - Recognized responsibility and credit for creating a scholarly or other written work.

contribution - A person's or activity's part in producing a shared result.

corresponding author - The author designated to coordinate communication about a scholarly publication.

acknowledgment - Recognition of another person's contribution or confirmation that a message was received.

3. Notice the language

Summarize the issue neutrally, invite missing perspectives, and distinguish discussion from decision. State who can decide and record any unresolved question. Do not assume silence means agreement.

Let's hear ... before we decide.

The point we still need to resolve is

Who will make this decision, and what do they need?

Improve this sentence: Nobody objected, so everyone agrees.

LESSON 05 / PRACTICE AND PRODUCE

Help a group reach a clear next step

4. Check the language

1. Which phrase invites a missing perspective?
 - A. The remote team has been quiet, so they must agree.
 - B. We can record their agreement without asking them.
 - C. We haven't heard from the remote team yet; what is your view?
2. Which closing statement records an unresolved decision accurately?
 - A. Everyone spoke, so the decision must be final.
 - B. Approval is pending; the sponsor will review the two options.
 - C. We discussed the options, so approval is complete.

5. Say it

Prepare for two minutes. Speak for 45-60 seconds using the case facts, then respond to your partner's question. Switch roles and repeat without reading the model response.

Partner: You hold a relevant concern that has not been discussed. Raise it when invited and ask who will decide. Help the facilitator state one unresolved question accurately.

6. Write it

Write a 70-110 word message for the person who needs to act on this case. State the purpose, preserve the relevant facts, and make the next action or unresolved question clear. Use a subject line and an appropriate opening. Do not invent a deadline, finding, or approval.

Check: facts accurate | meaning clear | tone appropriate | next action or question explicit

After checking the answer section, revise one sentence and try the spoken response again.

LESSON 06 / READ AND NOTICE

Peer Review and Revision Responses

Acknowledge a communication problem and give a corrected message.

SITUATION

A reviewer points out that a manuscript's claim goes beyond its sample. The authors agree that the wording needs revision.

1. Understand the situation

Identify two confirmed facts, one missing detail, and the person who needs your response. Do not fill gaps with invented facts.

2. Find the words

peer review - Evaluation of scholarly work by others with relevant expertise.

major revision - A publication decision requiring substantial changes before a manuscript is reconsidered.

response letter - A document replying to comments or questions and explaining the changes or reasoning.

scope - Defined boundary of work, responsibility, deliverables, assumptions, and exclusions.

3. Notice the language

Name what was unclear or wrong, acknowledge its effect, and correct it. A brief apology can help, followed by a practical next step. Avoid explaining away the other person's reaction or promising an outcome you cannot control.

My earlier message did not make ... clear.

I'm sorry for The correct information is

Let me check that the revised explanation addresses

Improve this sentence: I'm sorry if you failed to understand.

LESSON 06 / PRACTICE AND PRODUCE

Repair a misunderstanding

4. Check the language

1. Which apology takes responsibility for unclear wording?
 - A. I'm sorry if you chose to misunderstand it.
 - B. I'm sorry my earlier wording was unclear.
 - C. I'm sorry you did not read it correctly.
2. What should follow an apology for an incorrect date?
 - A. The corrected date and the current confirmation status.
 - B. A longer explanation that never states the correct date.
 - C. A new guaranteed date even if it is unverified.

5. Say it

Prepare for two minutes. Speak for 45-60 seconds using the case facts, then respond to your partner's question. Switch roles and repeat without reading the model response.

Partner: You are frustrated because an earlier message created an expectation. Explain that expectation. Ask your partner to distinguish the correction from anything still uncertain.

6. Write it

Write a 70-110 word message for the person who needs to act on this case. State the purpose, preserve the relevant facts, and make the next action or unresolved question clear. Use a subject line and an appropriate opening. Do not invent a deadline, finding, or approval.

Check: facts accurate | meaning clear | tone appropriate | next action or question explicit

After checking the answer section, revise one sentence and try the spoken response again.

LESSON 07 / READ AND NOTICE

Data Management and Reproducibility

Make a request with a clear action, purpose, and realistic timing.

SITUATION

A shared dataset has variable names but no description of units, missing values, or collection dates.

1. Understand the situation

Identify two confirmed facts, one missing detail, and the person who needs your response. Do not fill gaps with invented facts.

2. Find the words

metadata - Information describing data, such as its source, units, dates, and structure.

repository - A managed location for storing and accessing data, documents, or code.

provenance - The documented origin and history of data or an item.

reproducibility - Obtaining consistent results using the same data and methods; conventions vary by research field.

3. Notice the language

State the action and the information needed. Explain why it matters and specify a deadline only when one is given or agreed. 'Could you' is polite; repeated apologies can obscure a legitimate request. Urgent situations may require a direct request.

Could you provide ... so that ...?

Please confirm ... by [agreed time].

If that timing is not possible, please let me know

Improve this sentence: Please revert soonest with the necessary.

LESSON 07 / PRACTICE AND PRODUCE

Ask for an actionable next step

4. Check the language

1. What does 'Please send it by Thursday' normally mean?
 - A. Send it no later than Thursday.
 - B. Send it only after Thursday.
 - C. Send it on a date later than Thursday.
2. Which request gives the recipient enough detail to act?
 - A. Could you deal with the relevant matters soon?
 - B. Could you do the needful for the situation?
 - C. Could you confirm the document version needed for the review?

5. Say it

Prepare for two minutes. Speak for 45-60 seconds using the case facts, then respond to your partner's question. Switch roles and repeat without reading the model response.

Partner: You can help but need a clear request and its purpose. Ask what is required and whether the timing is fixed or negotiable.

6. Write it

Write a 70-110 word message for the person who needs to act on this case. State the purpose, preserve the relevant facts, and make the next action or unresolved question clear. Use a subject line and an appropriate opening. Do not invent a deadline, finding, or approval.

Check: facts accurate | meaning clear | tone appropriate | next action or question explicit

After checking the answer section, revise one sentence and try the spoken response again.

LESSON 08 / READ AND NOTICE

Academic Presentations and Conferences

Separate observations, assumptions, and conclusions.

SITUATION

An audience member asks whether a small study proves a general theory. The presenter needs a concise answer.

1. Understand the situation

Identify two confirmed facts, one missing detail, and the person who needs your response. Do not fill gaps with invented facts.

2. Find the words

generalizability - The extent to which findings may apply beyond the people or conditions studied.

limitation - A condition that restricts what evidence, work, or a conclusion can establish.

future work - Further questions or activities proposed after the current study or project.

conference Q&A - The question-and-answer discussion associated with a conference presentation.

3. Notice the language

Say what the evidence shows, identify what is still unknown, and limit the conclusion to that evidence. Words such as 'may', 'suggests', and 'in this sample' are useful when the uncertainty is real. Do not soften an urgent, verified safety concern.

The available evidence shows

This may indicate ..., but

We have not yet established whether

Improve this sentence: The pilot proves this will work everywhere.

LESSON 08 / PRACTICE AND PRODUCE

Match certainty to evidence

4. Check the language

1. Which sentence preserves uncertainty about an unconfirmed cause?
 - A. The change must have caused the delay.
 - B. The change definitely caused the delay.
 - C. The change may have contributed to the delay.
2. A result comes from a small pilot in one location. Which phrase accurately limits the claim?
 - A. Without any uncertainty, the result is ...
 - B. In this pilot, the observed result was ...
 - C. In every location, the result will be ...

5. Say it

Prepare for two minutes. Speak for 45-60 seconds using the case facts, then respond to your partner's question. Switch roles and repeat without reading the model response.

Partner: You need to tell a colleague what is known. Ask which part is confirmed and which part is an assumption. Challenge one statement that sounds more certain than the case supports.

6. Write it

Write a 70-110 word message for the person who needs to act on this case. State the purpose, preserve the relevant facts, and make the next action or unresolved question clear. Use a subject line and an appropriate opening. Do not invent a deadline, finding, or approval.

Check: facts accurate | meaning clear | tone appropriate | next action or question explicit

After checking the answer section, revise one sentence and try the spoken response again.

Answer workshop

Try the tasks first. The model is one acceptable response, not a script to memorize. Your written version needs a subject line, an opening, and appropriate context. Assess it using the four criteria at the end.

01 | Research Questions and Study Design

Editing example: Could you explain what this means?

After an introductory phrase such as 'Could you explain', the embedded question uses statement word order: what this means.

Check 1: A - Could you confirm when the review starts?

A: The embedded question uses subject then verb: the review starts.

B: Remove 'does' and use statement word order after 'confirm'.

C: Place the subject 'the review' before 'starts'.

Check 2: C - Has the report been approved, or is it ready for review?

A: This asks about delivery timing, not whether approval has happened.

B: This asks about the presenter, not the report's approval status.

C: This question distinguishes two meanings of 'ready' that affect the next action.

Model response: What outcome would count as improvement, for whom, and over what period?

A clearer research question will help us choose an appropriate design and describe its limits.

Case check: underline the confirmed information and circle a limitation, question, or next step in the response.

02 | Grant Proposals and Specific Aims

Editing example: The pilot worked in the tested setting; performance elsewhere remains untested.

The revision states the finding and its scope. It avoids turning limited evidence into a universal claim.

Check 1: C - The change may have contributed to the delay.

A: 'Must have' expresses a strong inference that the evidence may not support.

B: 'Definitely' presents the cause as certain.

C: 'May have contributed' presents a possibility without claiming the cause is established.

Check 2: B - In this pilot, the observed result was ...

A: This removes uncertainty rather than explaining its limits.

B: This locates the finding in the setting actually studied.

C: The pilot does not establish future results everywhere.

Model response: The pilot can test feasibility and provide preliminary evidence. It cannot resolve the entire problem. I'll narrow the aim so the proposed work and the claim match.

Case check: underline the confirmed information and circle a limitation, question, or next step in the response.

03 | Lab Meetings and Data Challenges

Editing example: Could you send the missing document and confirm when it will be available?

The revision names the document and requested response. It avoids expressions that may be unfamiliar or ambiguous for an international audience.

Check 1: B - Send it no later than Thursday.

A: A later date does not meet a 'by Thursday' deadline.

B: 'By' sets the latest point, while 'after' refers to a later time.

C: This reverses the meaning of the deadline.

Check 2: A - Could you confirm the document version needed for the review?

A: The requested action and information are explicit.

B: 'Relevant matters' and 'soon' leave the task unclear.

C: This expression does not identify the specific action needed.

Model response: Could we compare the protocol versions and recorded conditions? Please add the missing change to the record so the team can assess possible explanations for the difference.

Case check: underline the confirmed information and circle a limitation, question, or next step in the response.

04 | Research Ethics and Human Subjects

Editing example: Could you explain what this means?

After an introductory phrase such as 'Could you explain', the embedded question uses statement word order: what this means.

Check 1: A - Could you confirm when the review starts?

A: The embedded question uses subject then verb: the review starts.

B: Remove 'does' and use statement word order after 'confirm'.

C: Place the subject 'the review' before 'starts'.

Check 2: C - Has the report been approved, or is it ready for review?

A: This asks about delivery timing, not whether approval has happened.

B: This asks about the presenter, not the report's approval status.

C: This question distinguishes two meanings of 'ready' that affect the next action.

Model response: Does the proposed use fall within the relevant approval and consent arrangements? Let's check with the appropriate ethics and data-governance processes before assuming reuse is permitted.

Case check: underline the confirmed information and circle a limitation, question, or next step in the response.

05 | Authorship, Collaboration, and Credit

Editing example: Before I record agreement, does anyone have a concern or need more time?

The revised question gives people a way to raise a concern. Silence can have several meanings, especially in unfamiliar or unequal-power situations.

Check 1: C - We haven't heard from the remote team yet; what is your view?

A: Silence does not establish agreement.

B: Recording agreement without checking may misrepresent the team's view.

C: It invites participation without interpreting silence as consent.

Check 2: B - Approval is pending; the sponsor will review the two options.

A: Participation alone does not establish a decision.

B: This distinguishes discussion from approval and identifies the next reviewer.

C: Discussion does not itself constitute approval.

Model response: Could we document each contribution and review the applicable authorship criteria as a group? That will give us a clearer basis for the discussion than relying on assumptions about rank or effort.

Case check: underline the confirmed information and circle a limitation, question, or next step in the response.

06 | Peer Review and Revision Responses

Editing example: I'm sorry my message did not explain the timing clearly.

The revision takes responsibility for the message without blaming the listener. It identifies what needs to be corrected.

Check 1: B - I'm sorry my earlier wording was unclear.

A: This attributes an unverified motive to the listener.

B: This acknowledges the speaker's contribution to the problem.

C: This shifts blame to the reader.

Check 2: A - The corrected date and the current confirmation status.

A: A repair needs usable corrected information, including any uncertainty.

B: The reader still lacks the information they need.

C: An unsupported new promise can create a second misunderstanding.

Model response: Thank you for identifying this limitation. We have narrowed the claim to the studied sample and added a discussion of generalizability. The response should point the reviewer to the revised passage.

Case check: underline the confirmed information and circle a limitation, question, or next step in the response.

07 | Data Management and Reproducibility

Editing example: Could you send the missing document and confirm when it will be available?

The revision names the document and requested response. It avoids expressions that may be unfamiliar or ambiguous for an international audience.

Check 1: A - Send it no later than Thursday.

A: 'By' sets the latest point, while 'after' refers to a later time.

B: This reverses the meaning of the deadline.

C: A later date does not meet a 'by Thursday' deadline.

Check 2: C - Could you confirm the document version needed for the review?

A: 'Relevant matters' and 'soon' leave the task unclear.

B: This expression does not identify the specific action needed.

C: The requested action and information are explicit.

Model response: Could you add a data dictionary covering units, missing-value codes, and collection dates? Those details will help another researcher interpret and reuse the data correctly.

Case check: underline the confirmed information and circle a limitation, question, or next step in the response.

08 | Academic Presentations and Conferences

Editing example: The pilot worked in the tested setting; performance elsewhere remains untested.

The revision states the finding and its scope. It avoids turning limited evidence into a universal claim.

Check 1: C - The change may have contributed to the delay.

A: 'Must have' expresses a strong inference that the evidence may not support.

B: 'Definitely' presents the cause as certain.

C: 'May have contributed' presents a possibility without claiming the cause is established.

Check 2: B - In this pilot, the observed result was ...

A: This removes uncertainty rather than explaining its limits.

B: This locates the finding in the setting actually studied.

C: The pilot does not establish future results everywhere.

Model response: The study offers evidence relevant to the theory under these conditions. It does not establish the theory in every setting. A useful next step would test whether the finding holds in a broader sample.

Case check: underline the confirmed information and circle a limitation, question, or next step in the response.

Give feedback that helps

Score each criterion 0, 1, or 2. This is a practice rubric, not a professional qualification or CEFR test. Do not award or remove points for a particular accent.

Meaning and accuracy

Keeps the case facts accurate; clearly separates confirmed and unknown information.

Clarity and language

Uses understandable sentences and explains specialist terms when the listener needs it.

Interaction and tone

Responds to the other person's question, checks understanding, and uses an appropriate tone.

Task completion

Makes the requested action or unresolved question clear without inventing authority or facts.

Use the same scale for each criterion

0 - Not yet: The reader or listener cannot yet recover the intended meaning or action.

1 - With support: The message works after a prompt, clarification, or revision.

2 - Independently: The message is clear and accurate without a prompt.

Feedback sequence

First, identify a successful phrase. Next, identify one point where meaning or accuracy needs work. Offer one useful language correction, allow a repeat, and compare the two attempts. A total out of eight describes this performance only; do not translate it into a proficiency level.

Final challenge

Choose a case not rehearsed today. The learner gives a one-minute response, answers two follow-up questions, and writes a 70-110 word message. Add the lesson's second-round challenge. Compare the result with an earlier attempt using the four criteria.

Use the language responsibly

All cases and figures are fictional. Adapt the language to your role and organization's current procedures, using invented details for practice.

Meaning before performance

Use specialist terms only when they help the listener. Explain unfamiliar words, preserve uncertainty, and ask when an instruction or responsibility is unclear. The model responses illustrate language; they do not authorize professional actions.

Sources and further reading

The cases, workshops, and explanations are original teaching material. These references provide language frameworks and selected professional context. References were checked in September 2026; consult current local guidance for actual work.

Digital.gov: plain-language guidance

Your next step

Choose one expression you can use in a genuine work situation. Rehearse it with fictional details, then adapt the wording to your role and audience.
