

ENGLISH FOR WORK / SEPTEMBER 2026

Manufacturing English

Teacher's guide

Teach practical workplace communication with specific cases, clear language targets, and a repeatable feedback process.

PRACTICE THAT TRANSFERS TO WORK

Read a realistic case. Study complete conversations. Find the right language, speak, get feedback, and try again.

Eight lessons | Intermediate to advanced | Independent or classroom study

For plant managers, production supervisors, quality engineers, maintenance teams, industrial engineers, safety leads, supply planners, and manufacturing-adjacent professionals.

These cases practice communication. Actual equipment, construction, and safety work follows approved procedures and authorized specialist decisions.

All scenarios, figures, and model responses are fictional teaching material. Use invented details in practice.

[Open this course on English Ladder](#)

Your course at a glance

Use the lesson numbers to match this document with the website and the other guides.

01 Production Flow and Daily Management

Distinguish completed work from pending work and explain its impact.

02 Lean, Waste, and Continuous Improvement

Describe observed behavior, its effect, and a useful next step.

03 Defects, Scrap, and Rework

Explain a useful distinction in plain English.

04 Root Cause and Corrective Action

Separate observations, assumptions, and conclusions.

05 Maintenance, Reliability, and Changeover

Negotiate scope or timing while making conditions explicit.

06 EHS and Safety Communication

Make a request with a clear action, purpose, and realistic timing.

07 Supplier Quality and Incoming Materials

Clarify missing information before responding.

08 Shift Handoffs and Escalation

Give a handoff that the receiving person can confirm.

Choose your pace

Quick practice: spend 15 minutes reading one conversation and rehearsing one scenario. Full lesson: allow 45-60 minutes for language work, three conversations, two speaking scenarios, and feedback.

Level support

B1 learners can use the frames and a partner. B2 learners can try a response before reading the model. C1 learners can add the harder follow-up and reduce preparation time. These are teaching suggestions, not certified CEFR level ratings.

After practicing: open the AI prompt workshop to choose a vocabulary, grammar, role-play, or new-dialogue activity.

A 60-minute lesson that works

Prepare the case and the learner pages. Keep the model response hidden until learners have attempted their own. Choose two field terms that are important to understanding the case.

0-5 minutes | Activate experience

Ask learners to name a comparable situation without sharing confidential details. Introduce the communication goal.

5-12 minutes | Read and sort facts

Read the case. Learners identify confirmed facts, unknowns, the audience, and the immediate communication need.

12-22 minutes | Notice and practice language

Explain the workshop pattern. Work through the vocabulary and editing example, then discuss both language checks and the reasons behind the choices.

22-35 minutes | 05 • Conversations

Read one ten-turn conversation aloud, notice a useful expression, then compare the other two. Identify each speaker's purpose and how the exchange ends.

35-47 minutes | 06 • Say it

Rehearse both speaking scenarios from the workbook. Give two minutes of preparation, switch roles, and use the success checks. Add the complication only after a successful first round.

47-55 minutes | Compare and revise

Reveal the model. Discuss alternative acceptable wording. Give one meaning correction and one language correction, then repeat.

55-60 minutes | Retrieve and transfer

Close the materials. Learners recall two expressions and identify one communication habit to use in another situation.

Adapt the session

For 45 minutes, study one complete conversation and rehearse one scenario; assign the others for oral follow-up. For 90 minutes, rehearse all three conversations and give both scenarios a second round. More time should produce more meaningful practice, not longer explanations.

LESSON 01 / FACILITATOR NOTES

Production Flow and Daily Management

Distinguish completed work from pending work and explain its impact.

CASE

A production line made 840 units against a 1,000-unit target. The log records 40 minutes of downtime; its cause is still being checked.

Teach this move

Lead with the current state, then the important change or open item. Use completed-action language only for completed work. Add a next update point when it is known; do not invent a date to make the message sound complete.

Vocabulary to check: throughput, cycle time, constraint, downtime.

Model response

Output was 160 units below target, and the log shows 40 minutes of downtime. We have not confirmed the cause. I'll include the downtime review in the next production update.

Listen for, then coach

Ask learners to point to the case fact behind each important statement. Accept different wording when it preserves meaning, fits the listener, and does not invent an outcome. The revision gives observable progress. A positive label alone does not tell the reader what is complete or still needed.

Second-round challenge

The listener asks you to reduce the update to two sentences. Preserve the most important completed and pending items.

Language-check answers

1. B - The team has completed the review. 'Has completed' states that the action is finished.
2. A - Delivery is planned for Friday; the carrier has not confirmed it. This explicitly labels the date as planned and identifies the missing confirmation.

05 • Conversations

1. A 160-unit gap with downtime still under review - Fictional daily production meeting: the line made 840 units against a 1,000-unit target; 40 minutes of downtime are logged, but the cause is unconfirmed.
2. A queue grows between assembly and inspection - Separate fictional production case: assembly completed 120 units, inspection completed 90, and 30 newly assembled units await inspection; no earlier queue is included.

3. The line restarted, but the loss is not explained - Separate fictional daily-management exercise: line B restarted at 11:10 after a 15-minute stop; the stop reason and lost-output estimate remain unverified.

Use the complete ten-turn scripts in the learner workbook and conversation lab. Read with roles, identify the decision or open question, then replay without reading.

06 · Say it: second scenario | Output recorded in different units

A fictional morning board shows 60 boxes while the production target is 600 individual units. The number of units per box has not been confirmed. Give a status explanation and request the missing conversion before stating performance against target.

Role A: Production analyst: identify the measurement mismatch.

Role B: Shift leader: confirm the need to verify packing quantity before comparing output.

Possible opening: The board counts boxes, but the target counts individual units, so we need the verified conversion.

Success checks

- Keep the two measurement units distinct.
- Do not invent a conversion or performance result.
- Agree who verifies the pack quantity and updates the board.

Add a complication: A manager suggests assuming ten units per box because that was last month's format.

LESSON 02 / FACILITATOR NOTES

Lean, Waste, and Continuous Improvement

Describe observed behavior, its effect, and a useful next step.

CASE

A team observes repeated waiting for shared tools during a kaizen event. A supervisor blames slow operators.

Teach this move

Use a specific example instead of a personality label. Explain its effect, invite the person's perspective, and agree on a practical improvement. Focus on communication that can be changed, not accent or national identity.

Vocabulary to check: kaizen, standard work, waste, value stream.

Model response

The observed delay occurs while people wait for shared tools. Let's examine tool availability and layout before attributing the issue to individual speed. Could we test a revised arrangement?

Listen for, then coach

Ask learners to point to the case fact behind each important statement. Accept different wording when it preserves meaning, fits the listener, and does not invent an outcome. The revision identifies observable work. 'Always' and a personality judgment make the feedback harder to verify or act on.

Second-round challenge

The recipient disagrees with your interpretation. Return to the observed example, listen, and revise an unsupported assumption.

Language-check answers

1. A - The last two updates omitted the agreed completion date. The recipient can check the specific examples and discuss how to improve them.
2. C - What is making this part of the task difficult? An open question may reveal a barrier the speaker has not considered.

05 • Conversations

1. Waiting for shared tools, not slow operators - Fictional kaizen discussion: repeated waits for shared tools were observed, but the supervisor has described the operators as slow.

2. A long walk to the label printer - Separate fictional improvement case: an observer recorded six trips from packing to a shared label printer during one hour; distances and causes of repeat trips are unmeasured.

3. A handoff interrupts standard work - Separate fictional kaizen observation: an operator stopped the packing sequence twice to answer status questions already shown on the team's board.

Use the complete ten-turn scripts in the learner workbook and conversation lab. Read with roles, identify the decision or open question, then replay without reading.

06 · Say it: second scenario | A suggestion dismissed before explanation

During a fictional kaizen meeting, a technician proposes moving a shared gauge. The supervisor replies that the team always complains before hearing the reason. Practice feedback on the interruption and invite the technician's process observation.

Role A: Improvement facilitator: describe the supervisor's actual remark and its effect on the discussion.

Role B: Production supervisor: acknowledge the interruption and propose a more useful follow-up question.

Possible opening: When the suggestion was called complaining before the reason was heard, we lost the chance to examine the process issue.

Success checks

- Use the supplied behavior rather than label the supervisor's character.
- Separate hearing a suggestion from approving a change.
- Agree a focused question about the observed workflow.

Add a complication: The supervisor says accepting feedback means agreeing to move the gauge immediately.

LESSON 03 / FACILITATOR NOTES

Defects, Scrap, and Rework

Explain a useful distinction in plain English.

CASE

A quality report combines scrapped units with units awaiting rework. The manager needs to understand the different consequences.

Teach this move

Start with the reader's question. Explain one unfamiliar term with familiar words, then give a relevant example or contrast. Check understanding without asking only 'Do you understand?'.

Vocabulary to check: defect, scrap, rework, containment.

Model response

Scrap and rework are different outcomes. Scrapped units will not return to the process as usable product; rework attempts to make units conform. I'll report their quantities separately.

Listen for, then coach

Ask learners to point to the case fact behind each important statement. Accept different wording when it preserves meaning, fits the listener, and does not invent an outcome. The revised sentence names the action in familiar words. Specialist vocabulary is useful when it adds precision, but repeating abstract nouns can hide the meaning.

Second-round challenge

Your listener is new to this field. Replace two specialist expressions with clear explanations without changing the meaning.

Language-check answers

1. C - The backlog is the work still waiting to be completed. This gives the meaning in familiar words.
2. B - How would you describe the next step in your own words? An open request lets the listener show their understanding.

05 • Conversations

1. Scrap and pending rework are different outcomes - Fictional quality review: a report combines scrapped units with units awaiting rework; separate quantities and final rework outcomes are not supplied.
2. Fifty units contained, five units confirmed defective - Separate fictional inspection case: 50 units are contained for review, with five units confirmed defective so far; inspection of the remaining 45 units is pending.

3. Rework finished, acceptance check not finished - Separate fictional production case: 18 units completed an authorized rework activity, but their subsequent acceptance checks have not been completed.

Use the complete ten-turn scripts in the learner workbook and conversation lab. Read with roles, identify the decision or open question, then replay without reading.

06 · Say it: second scenario | One unit with two defects

A fictional inspection finds two defects on one unit and one defect on a second unit. The report says three defective units. Discuss the difference between defect count and defective-unit count before the daily meeting.

Role A: Quality analyst: explain the two counting methods using the supplied observations.

Role B: Production supervisor: confirm the corrected unit count and ask how both measures should be labeled.

Possible opening: We found three defects across two units, not three defective units.

Success checks

- State three defects and two affected units accurately.
- Keep the measures distinct and avoid double counting.
- Do not infer scrap, rework, or release from defect count alone.

Add a complication: A colleague wants to add the two measures together into one total quality-loss number.

LESSON 04 / FACILITATOR NOTES

Root Cause and Corrective Action

Separate observations, assumptions, and conclusions.

CASE

A defect appears after a supplier change, but several process settings also changed. A team member names the supplier as the root cause.

Teach this move

Say what the evidence shows, identify what is still unknown, and limit the conclusion to that evidence. Words such as 'may', 'suggests', and 'in this sample' are useful when the uncertainty is real. Do not soften an urgent, verified safety concern.

Vocabulary to check: root cause, 5 Whys, fishbone, 8D.

Model response

The timing makes the supplier change worth examining, but other settings changed too. It is a hypothesis, not an established root cause. Let's compare the evidence before closing the investigation.

Listen for, then coach

Ask learners to point to the case fact behind each important statement. Accept different wording when it preserves meaning, fits the listener, and does not invent an outcome. The revision states the finding and its scope. It avoids turning limited evidence into a universal claim.

Second-round challenge

Someone asks for a yes-or-no answer when the evidence supports only a qualified answer. Be concise while preserving the uncertainty.

Language-check answers

1. B - The change may have contributed to the delay. 'May have contributed' presents a possibility without claiming the cause is established.
2. A - In this pilot, the observed result was ... This locates the finding in the setting actually studied.

05 • Conversations

1. A supplier change is one hypothesis - Fictional root-cause review: a defect appeared after a supplier change, but several process settings also changed.
2. A repeated adjustment does not establish the cause - Separate fictional investigation: operators adjusted alignment after three separate defects, but no controlled comparison or verified cause exists.

3. A clean shift after a change is encouraging, not conclusive - Separate fictional corrective-action review: one shift reported no recurrence after a process change; only that shift's observation is available.

Use the complete ten-turn scripts in the learner workbook and conversation lab. Read with roles, identify the decision or open question, then replay without reading.

06 · Say it: second scenario | Two changed conditions in the successful trial

A fictional defect trial changed both material storage and machine setup; the trial produced no observed defects. The team wants to credit storage alone. Discuss what the trial can establish and what comparison remains needed.

Role A: Process engineer: describe both changed conditions and the observed result.

Role B: Quality investigator: challenge the single-cause conclusion and propose a reviewed evidence-gathering step.

Possible opening: Both storage and setup changed, so this result doesn't isolate storage as the cause.

Success checks

- Keep both changed conditions visible.
- Distinguish the observed trial result from a causal conclusion.
- Agree further assessment without prescribing an unsafe process experiment.

Add a complication: The meeting chair wants one root cause entered before lunch regardless of the evidence.

LESSON 05 / FACILITATOR NOTES

Maintenance, Reliability, and Changeover

Negotiate scope or timing while making conditions explicit.

CASE

A planned maintenance window conflicts with a rush order. The maintenance team needs to explain the available options to the decision maker.

Teach this move

Acknowledge the goal and explain the available choices. Connect an offer to its actual conditions. A useful response makes room for discussion without promising approval or resources you do not control.

Vocabulary to check: preventive maintenance, MTBF, changeover, spare parts.

Model response

The rush order and maintenance window compete for the same equipment. Could we review the approved options, expected production impact, and reliability concerns together before changing the plan?

Listen for, then coach

Ask learners to point to the case fact behind each important statement. Accept different wording when it preserves meaning, fits the listener, and does not invent an outcome. For an ordinary future condition, the "if" clause uses present tense. The other clause can express the future consequence or possibility.

Second-round challenge

The preferred option is unavailable. Offer an alternative and clearly state any approval still needed.

Language-check answers

1. A - If the scope changes, we will review the schedule. The "if" clause uses present tense; the main clause states the future response.
2. C - We can assess the addition and explain its effect on the agreed scope. This offers a useful next step while keeping the approval and scope question open.

05 · Conversations

1. A rush order overlaps planned maintenance - Fictional scheduling negotiation: a rush order overlaps a planned maintenance window; no authorization to defer maintenance or spare capacity is confirmed.
2. A spare part has an estimate, not a confirmed arrival - Separate fictional maintenance plan: a required spare part has an estimated Tuesday delivery; the carrier has not confirmed arrival, and the maintenance window is

Wednesday.

3. Changeover timing with an unconfirmed extra order - Separate fictional planning case: a changeover is planned after order A; sales proposes adding order B first, but B's quantity and due date are unconfirmed.

Use the complete ten-turn scripts in the learner workbook and conversation lab. Read with roles, identify the decision or open question, then replay without reading.

06 · Say it: second scenario | A reliability average used to justify deferral

A fictional planning slide cites an equipment MTBF figure but gives no maintenance recommendation. A manager wants to use it to postpone a scheduled task. Practice explaining that mean time between failures is not itself authorization to defer work.

Role A: Maintenance planner: explain the distinction and request the authorized assessment.

Role B: Production manager: describe the schedule pressure and discuss conditional alternatives.

Possible opening: The MTBF figure summarizes reliability history; it does not by itself authorize postponing this task.

Success checks

- Do not convert an average into a no-failure promise.
- Keep maintenance authority with the responsible specialists.
- Agree to assess schedule options under explicit conditions.

Add a complication: The manager asks you to guarantee that nothing will fail during the delay.

LESSON 06 / FACILITATOR NOTES

EHS and Safety Communication

Make a request with a clear action, purpose, and realistic timing.

CASE

During a safety exercise, a learner notices an unclear equipment-isolation instruction. The local approved procedure must govern the work.

Teach this move

State the action and the information needed. Explain why it matters and specify a deadline only when one is given or agreed. 'Could you' is polite; repeated apologies can obscure a legitimate request. Urgent situations may require a direct request.

Vocabulary to check: EHS, lockout/tagout, near miss, stop work.

Model response

I need clarification of this instruction before the task proceeds. Please involve the authorized person and use the approved safety procedure. I will point out exactly which instruction is unclear.

Listen for, then coach

Ask learners to point to the case fact behind each important statement. Accept different wording when it preserves meaning, fits the listener, and does not invent an outcome. The revision names the document and requested response. It avoids expressions that may be unfamiliar or ambiguous for an international audience.

Second-round challenge

The other person cannot meet the requested timing. Clarify an alternative without inventing authority to change a formal deadline.

Language-check answers

1. C - Send it no later than Thursday. 'By' sets the latest point, while 'after' refers to a later time.
2. B - Could you confirm the document version needed for the review? The requested action and information are explicit.

05 · Conversations

1. An unclear isolation instruction before work begins - Fictional safety-communication exercise: an equipment-isolation instruction is ambiguous, no work has begun, and the local approved procedure must govern the task.

2. A near-miss report needs the location clarified - Separate fictional EHS reporting exercise: a near miss is reported near a loading area, but the exact location is missing and no injury is reported in the supplied account.
3. A stop-work concern needs a named receiver - Separate fictional safety drill: a technician raises a stop-work concern about conflicting task instructions, but no supervisor has acknowledged it; no operating steps are supplied.

Use the complete ten-turn scripts in the learner workbook and conversation lab. Read with roles, identify the decision or open question, then replay without reading.

06 · Say it: second scenario | A safety notice with an unreadable equipment number

In a fictional safety exercise, a posted notice refers to an equipment number that cannot be read. A scheduled task may involve that equipment, but the match is unconfirmed. Request clarification through the local approved process before proceeding.

Role A: Maintenance technician: identify the unreadable reference and request an authorized check.

Role B: EHS supervisor: confirm receipt and arrange clarification without guessing the number.

Possible opening: I can't read the equipment reference on this notice, so I need confirmation before the scheduled task proceeds.

Success checks

- State the precise uncertainty.
- Do not infer the notice is irrelevant or give operational isolation steps.
- Confirm the authorized review route and receiving owner.

Add a complication: A colleague says the notice probably concerns another machine and suggests ignoring it.

LESSON 07 / FACILITATOR NOTES

Supplier Quality and Incoming Materials

Clarify missing information before responding.

CASE

An incoming inspection report cites a dimension without identifying the drawing revision. The supplier used a different revision.

Teach this move

Name the exact word, fact, or requirement you need clarified. Ask one focused question at a time. Repeat your understanding and give the other person a chance to correct it.

Vocabulary to check: supplier quality, incoming inspection, specification, deviation.

Model response

Which drawing revision applies to this delivery? Let's record both references and ask the responsible quality team to resolve the discrepancy before we describe the material as conforming.

Listen for, then coach

Ask learners to point to the case fact behind each important statement. Accept different wording when it preserves meaning, fits the listener, and does not invent an outcome. After an introductory phrase such as 'Could you explain', the embedded question uses statement word order: "what this means".

Second-round challenge

The other person uses an ambiguous word such as 'ready', 'approved', or 'urgent'. Clarify it before continuing.

Language-check answers

1. B - Could you confirm when the review starts? The embedded question uses subject then verb: "the review starts".
2. A - Has the report been approved, or is it ready for review? This question distinguishes two meanings of 'ready' that affect the next action.

05 • Conversations

1. An inspection dimension without a drawing revision - Fictional supplier-quality call: an incoming report cites a dimension but omits the drawing revision; the supplier used a different revision.
2. Millimeters or inches on the supplier report? - Separate fictional incoming inspection: a supplier report lists a dimension as 2.5 without a unit; the receiving specification uses millimeters.

3. A deviation request is not an approved exception - Separate fictional supplier discussion: a supplier submitted a deviation request for lot M6, but the receiving team has no approval record.

Use the complete ten-turn scripts in the learner workbook and conversation lab. Read with roles, identify the decision or open question, then replay without reading.

06 · Say it: second scenario | A certificate refers to the wrong order

A fictional incoming lot has a certificate naming purchase order 418, while the delivery paperwork names 481. The material identity has not been reconciled. Clarify the mismatch before using the certificate as evidence.

Role A: Incoming quality coordinator: identify the two order references and request verification.

Role B: Supplier documentation specialist: check the source records without assuming a typing error.

Possible opening: The certificate says 418 and the delivery says 481; could you verify which order this certificate supports?

Success checks

- State both references accurately.
- Do not assume a typographical error or alter supplier evidence informally.
- Agree a source-backed clarification and preserve lot traceability.

Add a complication: A colleague suggests changing the digits locally because the numbers look transposed.

LESSON 08 / FACILITATOR NOTES

Shift Handoffs and Escalation

Give a handoff that the receiving person can confirm.

CASE

The outgoing shift has completed six of eight checks. Two checks remain open, with records attached and a named incoming supervisor.

Teach this move

State the current situation, relevant background, open task, and receiving role. Ask for acknowledgment or repeat-back of the critical item. Sending a message and transferring responsibility are not always the same thing.

Vocabulary to check: handoff, andon, escalation, owner.

Model response

Six checks are complete; two remain open. The records show what has been checked and what is pending. Please confirm that the incoming supervisor has accepted the follow-up tasks.

Listen for, then coach

Ask learners to point to the case fact behind each important statement. Accept different wording when it preserves meaning, fits the listener, and does not invent an outcome. The revised sentence asks for an identifiable receiving team instead of leaving responsibility with an unspecified 'someone'.

Second-round challenge

The intended recipient cannot take ownership. Keep the status clear and identify the need for an authorized reassignment.

Language-check answers

1. A - Please confirm who will complete the outstanding check. It asks for an identifiable person or team responsible for the task.
2. C - So the result is pending and your team will follow up; is that correct? This repeats the status and responsibility and invites correction.

05 • Conversations

1. Six checks complete, two handed over - Fictional shift handoff: six of eight checks are complete, check seven (label reconciliation) and check eight (container-count review) remain open, records are attached, and incoming supervisor Lee is the named receiver.

2. An andon call acknowledged but unresolved - Separate fictional shift handoff: an andon call for line C was acknowledged at 13:40, but no resolution is recorded; incoming line leader Noor will follow up.

3. A quality hold must survive the shift change - Separate fictional handoff: pallet P9 remains on quality hold; investigation is pending, and no release has been authorized. Incoming warehouse supervisor Chen receives the handoff.

Use the complete ten-turn scripts in the learner workbook and conversation lab. Read with roles, identify the decision or open question, then replay without reading.

06 · Say it: second scenario | An unfinished count handed to the next shift

A fictional shift counted 70 of 100 containers. Thirty remain unchecked, and no discrepancy has yet been established. Incoming supervisor Rosa is the named receiver. Practice transferring the count status and follow-up responsibility.

Role A: Outgoing supervisor: state the checked and unchecked quantities without declaring the inventory reconciled.

Role B: Incoming supervisor Rosa: read back the remaining work and accept the next count-status update.

Possible opening: Seventy containers are checked; thirty remain, so the count is not yet complete.

Success checks

- Distinguish unchecked from missing.
- Read back seventy complete and thirty pending.
- Confirm Rosa's follow-up ownership without predicting the final count result.

Add a complication: A planner asks you to classify the thirty unchecked containers as missing.

Give feedback that helps

Score each criterion 0, 1, or 2. This is a practice rubric, not a professional qualification or CEFR test. Do not award or remove points for a particular accent.

Meaning and accuracy

Keeps the case facts accurate; clearly separates confirmed and unknown information.

Clarity and language

Uses understandable sentences and explains specialist terms when the listener needs it.

Interaction and tone

Responds to the other person's question, checks understanding, and uses an appropriate tone.

Task completion

Makes the requested action or unresolved question clear without inventing authority or facts.

Use the same scale for each criterion

0 - Not yet: The reader or listener cannot yet recover the intended meaning or action.

1 - With support: The message works after a prompt, clarification, or revision.

2 - Independently: The message is clear and accurate without a prompt.

Feedback sequence

First, identify a successful phrase. Next, identify one point where meaning or accuracy needs work. Offer one useful language correction, allow a repeat, and compare the two attempts. A total out of eight describes this performance only; do not translate it into a proficiency level.

Final challenge

Choose a case not rehearsed today. The learner gives a one-minute response, answers two follow-up questions, and writes a 70-110 word message. Add the lesson's second-round challenge. Compare the result with an earlier attempt using the four criteria.

Use the language responsibly

These cases practice communication. Actual equipment, construction, and safety work follows approved procedures and authorized specialist decisions.

Meaning before performance

Use specialist terms only when they help the listener. Explain unfamiliar words, preserve uncertainty, and ask when an instruction or responsibility is unclear. The model responses illustrate language; they do not authorize professional actions.

Sources and further reading

The cases, workshops, and explanations are original teaching material. These references provide language frameworks and selected professional context. References were checked in September 2026; consult current local guidance for actual work.

Council of Europe: CEFR descriptors

<https://www.coe.int/en/web/common-european-framework-reference-languages/cefr-descriptors>

Your next step

Choose one expression you can use in a genuine work situation. Rehearse it with fictional details, then adapt the wording to your role and audience.
