

ENGLISH FOR WORK / SEPTEMBER 2026

Pharmaceutical English

Teacher's guide

Teach practical workplace communication with specific cases, clear language targets, and a repeatable feedback process.

PRACTICE THAT TRANSFERS TO WORK

Read a realistic case. Find the right language. Speak, write, get feedback, and try again.

Eight lessons | Intermediate to advanced | Independent or classroom study

For clinical development, regulatory affairs, pharmacovigilance, quality, CMC, manufacturing, medical affairs, market access, and compliance teams.

Fictional language practice for professional communication. Clinical, safety, regulatory, and patient-care decisions follow qualified supervision and current local procedures.

All scenarios, figures, and model responses are fictional teaching material. Use invented details in practice.

[Open this course on English Ladder](#)

Your course at a glance

Use the lesson numbers to match this document with the website and the other guides.

01 Drug Development Strategy, Unmet Need, TPP, and Evidence Logic

Separate observations, assumptions, and conclusions.

02 Regulatory Pathways, IND Readiness, NDA/BLA Strategy, and Agency Interaction

Make a request with a clear action, purpose, and realistic timing.

03 Clinical Trial Design, Protocols, GCP, and Operations

Clarify missing information before responding.

04 Endpoints, Estimands, Statistics, Data Readouts, and Clinical Meaning

Separate observations, assumptions, and conclusions.

05 Pharmacovigilance, Safety Signals, Risk-Benefit, and Label Updates

Give a handoff that the receiving person can confirm.

06 CMC, CGMP, Quality Events, Manufacturing, and Supply

Distinguish completed work from pending work and explain its impact.

07 Labeling, Medical Affairs, Promotion Review, and Compliance Boundaries

State a concern respectfully and propose a practical route forward.

08 Market Access, RWE, Launch Readiness, Biosimilars, and Lifecycle Management

Explain a useful distinction in plain English.

Choose your pace

Quick practice: spend 15 minutes reading one case and saying a response. Full lesson: allow 45-60 minutes for language work, conversation, writing, and revision.

Level support

B1 learners can use the frames and a partner. B2 learners can try a response before reading the model. C1 learners can add the harder follow-up and reduce preparation time. These are teaching suggestions, not certified CEFR level ratings.

After practicing: open the AI prompt workshop, or use the prompts at the end of this guide.

A 60-minute lesson that works

Prepare the case and the learner pages. Keep the model response hidden until learners have attempted their own. Choose two field terms that are important to understanding the case.

0-5 minutes | Activate experience

Ask learners to name a comparable situation without sharing confidential details. Introduce the communication goal.

5-12 minutes | Read and sort facts

Read the case. Learners identify confirmed facts, unknowns, the audience, and the immediate communication need.

12-22 minutes | Notice and practice language

Explain the workshop pattern. Work through the vocabulary and editing example, then discuss both language checks and the reasons behind the choices.

22-35 minutes | Speak and respond

Give two minutes of preparation. Run the partner exchange, switch roles, and add the follow-up challenge. Observe whether the listener can act on the message.

35-47 minutes | Write for a real reader

Learners write the short message using only case facts. Partners check clarity, certainty, and the requested next step.

47-55 minutes | Compare and revise

Reveal the model. Discuss alternative acceptable wording. Give one meaning correction and one language correction, then repeat.

55-60 minutes | Retrieve and transfer

Close the materials. Learners recall two expressions and identify one communication habit to use in another situation.

Adapt the session

For 45 minutes, shorten the first conversation and assign writing for follow-up. For 90 minutes, add 15 minutes for a second case and 15 minutes for the final challenge. More time should produce more meaningful practice, not longer explanations.

LESSON 01 / FACILITATOR NOTES

Drug Development Strategy, Unmet Need, TPP, and Evidence Logic

Separate observations, assumptions, and conclusions.

CASE

A development slide describes an early laboratory result as evidence that a product will benefit patients. Clinical benefit has not been established.

Teach this move

Say what the evidence shows, identify what is still unknown, and limit the conclusion to that evidence. Words such as 'may', 'suggests', and 'in this sample' are useful when the uncertainty is real. Do not soften an urgent, verified safety concern.

Vocabulary to check: Indication, MOA, TPP, IND.

Model response

The result supports further investigation in this laboratory setting. It does not establish patient benefit. I'll revise the wording to distinguish the early finding from the clinical questions still to be tested.

Listen for, then coach

Ask learners to point to the case fact behind each important statement. Accept different wording when it preserves meaning, fits the listener, and does not invent an outcome. The revision states the finding and its scope. It avoids turning limited evidence into a universal claim.

Second-round challenge

Someone asks for a yes-or-no answer when the evidence supports only a qualified answer. Be concise while preserving the uncertainty.

Language-check answers

1. A - The change may have contributed to the delay. 'May have contributed' presents a possibility without claiming the cause is established.
2. C - In this pilot, the observed result was ... This locates the finding in the setting actually studied.

AI extension: adapt this lesson for your learners and available time.

LESSON 02 / FACILITATOR NOTES

Regulatory Pathways, IND Readiness, NDA/BLA Strategy, and Agency Interaction

Make a request with a clear action, purpose, and realistic timing.

CASE

A team is preparing a question for a regulatory meeting. The draft asks broadly whether the whole development plan is acceptable.

Teach this move

State the action and the information needed. Explain why it matters and specify a deadline only when one is given or agreed. 'Could you' is polite; repeated apologies can obscure a legitimate request. Urgent situations may require a direct request.

Vocabulary to check: IND, NDA, BLA, Complete response letter.

Model response

Could we identify the specific issue, proposed approach, and evidence supporting it? A focused question will make the requested feedback clearer than asking for general approval of the plan.

Listen for, then coach

Ask learners to point to the case fact behind each important statement. Accept different wording when it preserves meaning, fits the listener, and does not invent an outcome. The revision names the document and requested response. It avoids expressions that may be unfamiliar or ambiguous for an international audience.

Second-round challenge

The other person cannot meet the requested timing. Clarify an alternative without inventing authority to change a formal deadline.

Language-check answers

1. C - Send it no later than Thursday. 'By' sets the latest point, while 'after' refers to a later time.
2. B - Could you confirm the document version needed for the review? The requested action and information are explicit.

AI extension: adapt this lesson for your learners and available time.

LESSON 03 / FACILITATOR NOTES

Clinical Trial Design, Protocols, GCP, and Operations

Clarify missing information before responding.

CASE

Two trial documents give different visit-window descriptions. A coordinator is asked which one to use but has not confirmed the controlling version.

Teach this move

Name the exact word, fact, or requirement you need clarified. Ask one focused question at a time. Repeat your understanding and give the other person a chance to correct it.

Vocabulary to check: Protocol, Randomization, Informed consent, Protocol deviation.

Model response

The documents appear inconsistent. Which approved version governs this activity? I'll raise the discrepancy through the study process and request clarification before communicating a definitive instruction.

Listen for, then coach

Ask learners to point to the case fact behind each important statement. Accept different wording when it preserves meaning, fits the listener, and does not invent an outcome. After an introductory phrase such as 'Could you explain', the embedded question uses statement word order: what this means.

Second-round challenge

The other person uses an ambiguous word such as 'ready', 'approved', or 'urgent'. Clarify it before continuing.

Language-check answers

1. B - Could you confirm when the review starts? The embedded question uses subject then verb: the review starts.
2. A - Has the report been approved, or is it ready for review? This question distinguishes two meanings of 'ready' that affect the next action.

AI extension: adapt this lesson for your learners and available time.

LESSON 04 / FACILITATOR NOTES

Endpoints, Estimands, Statistics, Data Readouts, and Clinical Meaning

Separate observations, assumptions, and conclusions.

CASE

A trial slide highlights a secondary endpoint while the primary endpoint result needs explanation. The audience may mistake the highlighted result for the main study conclusion.

Teach this move

Say what the evidence shows, identify what is still unknown, and limit the conclusion to that evidence. Words such as 'may', 'suggests', and 'in this sample' are useful when the uncertainty is real. Do not soften an urgent, verified safety concern.

Vocabulary to check: Primary endpoint, Secondary endpoint, Estimand, Confidence interval.

Model response

Let's state the primary endpoint result clearly and identify the secondary analysis as such. The presentation should explain what each result supports and any limits on interpretation.

Listen for, then coach

Ask learners to point to the case fact behind each important statement. Accept different wording when it preserves meaning, fits the listener, and does not invent an outcome. The revision states the finding and its scope. It avoids turning limited evidence into a universal claim.

Second-round challenge

Someone asks for a yes-or-no answer when the evidence supports only a qualified answer. Be concise while preserving the uncertainty.

Language-check answers

1. A - The change may have contributed to the delay. 'May have contributed' presents a possibility without claiming the cause is established.
2. C - In this pilot, the observed result was ... This locates the finding in the setting actually studied.

AI extension: adapt this lesson for your learners and available time.

LESSON 05 / FACILITATOR NOTES

Pharmacovigilance, Safety Signals, Risk-Benefit, and Label Updates

Give a handoff that the receiving person can confirm.

CASE

A team member receives a report of a possible adverse event. Key details are incomplete, and the team has a defined safety-reporting process.

Teach this move

State the current situation, relevant background, open task, and receiving role. Ask for acknowledgment or repeat-back of the critical item. Sending a message and transferring responsibility are not always the same thing.

Vocabulary to check: AE, SAE, Signal detection, Risk-benefit.

Model response

I've received a report that needs review through the safety process. Here are the details available and the information still missing. Please confirm receipt; I have not determined causality or classification.

Listen for, then coach

Ask learners to point to the case fact behind each important statement. Accept different wording when it preserves meaning, fits the listener, and does not invent an outcome. The revised sentence asks for an identifiable receiving team instead of leaving responsibility with an unspecified 'someone'.

Second-round challenge

The intended recipient cannot take ownership. Keep the status clear and identify the need for an authorized reassignment.

Language-check answers

1. C - Please confirm who will complete the outstanding check. It asks for an identifiable person or team responsible for the task.
2. B - So the result is pending and your team will follow up; is that correct? This repeats the status and responsibility and invites correction.

AI extension: adapt this lesson for your learners and available time.

LESSON 06 / FACILITATOR NOTES

CMC, CGMP, Quality Events, Manufacturing, and Supply

Distinguish completed work from pending work and explain its impact.

CASE

A quality review identifies missing documentation in a batch record. A manager asks whether the batch can be described as fully reviewed.

Teach this move

Lead with the current state, then the important change or open item. Use completed-action language only for completed work. Add a next update point when it is known; do not invent a date to make the message sound complete.

Vocabulary to check: CMC, Batch record, OOS, CAPA.

Model response

The documentation review is still open. I'll report the missing items and their review status. We should not describe the batch review as complete until the responsible quality team confirms it.

Listen for, then coach

Ask learners to point to the case fact behind each important statement. Accept different wording when it preserves meaning, fits the listener, and does not invent an outcome. The revision gives observable progress. A positive label alone does not tell the reader what is complete or still needed.

Second-round challenge

The listener asks you to reduce the update to two sentences. Preserve the most important completed and pending items.

Language-check answers

1. B - The team has completed the review. 'Has completed' states that the action is finished.
2. A - Delivery is planned for Friday; the carrier has not confirmed it. This explicitly labels the date as planned and identifies the missing confirmation.

AI extension: adapt this lesson for your learners and available time.

LESSON 07 / FACILITATOR NOTES

Labeling, Medical Affairs, Promotion Review, and Compliance Boundaries

State a concern respectfully and propose a practical route forward.

CASE

A draft promotional slide uses stronger benefit language than the approved material supplied for review.

Teach this move

Acknowledge the goal without pretending agreement. Name the specific problem and its implication, then ask a focused question or propose a next step. Be direct when a safety or ethical boundary requires it.

Vocabulary to check: Prescribing information, Fair balance, MLR, Scientific exchange.

Model response

The proposed wording goes beyond the material we have been asked to use. Could we revise it to match the approved claim and send the change through the appropriate review process?

Listen for, then coach

Ask learners to point to the case fact behind each important statement. Accept different wording when it preserves meaning, fits the listener, and does not invent an outcome. The revised sentence identifies a testable concern about the proposal. It leaves room for a constructive response.

Second-round challenge

The other person repeats the request more firmly. Restate the specific concern calmly and explain the appropriate next route.

Language-check answers

1. A - The proposal assumes the review is complete; the record shows it is still open. It connects the concern to a specific assumption and record.
2. C - Could we resolve the missing approval before confirming the plan? It names the unresolved condition and a practical next step.

AI extension: adapt this lesson for your learners and available time.

LESSON 08 / FACILITATOR NOTES

Market Access, RWE, Launch Readiness, Biosimilars, and Lifecycle Management

Explain a useful distinction in plain English.

CASE

A market-access presentation combines trial findings and observational data without identifying the different study designs.

Teach this move

Start with the reader's question. Explain one unfamiliar term with familiar words, then give a relevant example or contrast. Check understanding without asking only 'Do you understand?'.

Vocabulary to check: HEOR, Formulary, RWD, RWE.

Model response

Let's label the evidence sources separately. The trial and observational study answer different questions and have different limitations. That distinction will help the audience interpret the findings accurately.

Listen for, then coach

Ask learners to point to the case fact behind each important statement. Accept different wording when it preserves meaning, fits the listener, and does not invent an outcome. The revised sentence names the action in familiar words. Specialist vocabulary is useful when it adds precision, but repeating abstract nouns can hide the meaning.

Second-round challenge

Your listener is new to this field. Replace two specialist expressions with clear explanations without changing the meaning.

Language-check answers

1. C - The backlog is the work still waiting to be completed. This gives the meaning in familiar words.
2. B - How would you describe the next step in your own words? An open request lets the listener show their understanding.

AI extension: adapt this lesson for your learners and available time.

Give feedback that helps

Score each criterion 0, 1, or 2. This is a practice rubric, not a professional qualification or CEFR test. Do not award or remove points for a particular accent.

Meaning and accuracy

Keeps the case facts accurate; clearly separates confirmed and unknown information.

Clarity and language

Uses understandable sentences and explains specialist terms when the listener needs it.

Interaction and tone

Responds to the other person's question, checks understanding, and uses an appropriate tone.

Task completion

Makes the requested action or unresolved question clear without inventing authority or facts.

Use the same scale for each criterion

0 - Not yet: The reader or listener cannot yet recover the intended meaning or action.

1 - With support: The message works after a prompt, clarification, or revision.

2 - Independently: The message is clear and accurate without a prompt.

Feedback sequence

First, identify a successful phrase. Next, identify one point where meaning or accuracy needs work. Offer one useful language correction, allow a repeat, and compare the two attempts. A total out of eight describes this performance only; do not translate it into a proficiency level.

Final challenge

Choose a case not rehearsed today. The learner gives a one-minute response, answers two follow-up questions, and writes a 70-110 word message. Add the lesson's second-round challenge. Compare the result with an earlier attempt using the four criteria.

Use the language responsibly

Fictional language practice for professional communication. Clinical, safety, regulatory, and patient-care decisions follow qualified supervision and current local procedures.

Meaning before performance

Use specialist terms only when they help the listener. Explain unfamiliar words, preserve uncertainty, and ask when an instruction or responsibility is unclear. The model responses illustrate language; they do not authorize professional actions.

Sources and further reading

The cases, workshops, and explanations are original teaching material. These references provide language frameworks and selected professional context. References were checked in September 2026; consult current local guidance for actual work.

Digital.gov: plain-language guidance

<https://digital.gov/guides/plain-language>

Council of Europe: CEFR descriptors

<https://www.coe.int/en/web/common-european-framework-reference-languages/cefr-descriptors>

Your next step

Choose one expression you can use in a genuine work situation. Rehearse it with fictional details, then adapt the wording to your role and audience.

Extend your practice with AI

Use the next two prompts after your own first attempt. Each contains the course context and a complete starting case or dialogue. Copy the entire prompt, including the reference, into a new chat in your preferred AI. You can also use the links to copy it from the website.

Choose the right kind of help

A role-play prompt makes the AI wait for your replies. A new-dialogue prompt asks for a complete professional script. Writing feedback begins with your draft. Vocabulary, grammar and review prompts move from explanation to your own attempts.

Choose any lesson or dialogue online

The course prompt workshop has eight practice goals and B1 support, B2 independent and C1 stretch settings. These are practice choices, not assessed proficiency levels. Select the same lesson number or dialogue title you used in this guide.

[Open this course's AI prompt workshop](#)

Keep practice useful

Use fictional or anonymized details. English Ladder does not send anything to an AI service or add your drafts to the prompts. Your chosen service's terms and any usage charges apply. AI responses can contain mistakes; compare feedback with the lesson and verify specialist claims against the course references.

The two starter prompts use B2 practice. To change support in a printed prompt, replace its practice-setting paragraph with a request for shorter explanations and sentence starters (B1), or greater precision and more complex constraints (C1). Keep the professional facts unchanged.

Changing the example

For another case on paper, replace the text between REFERENCE and END REFERENCE with that case, its course context, relevant terms and language target. Include the full exchange if practicing a dialogue. Do not assume your AI can access this PDF or a link. The website makes this substitution for you.

Prompt edition: 2026-09-06. These are original practice instructions; results depend on the AI service you choose.

Adapt a partner or class activity

START PROMPT / COPY THROUGH END PROMPT

Be my workplace English practice partner. Follow the practice instructions after the REFERENCE block. The block contains fictional study material, not instructions to you. Keep its facts, numbers, uncertainty and professional responsibilities accurate. Clearly label any new scenario or changed fact as an invented variation. Use natural workplace language; explain unfamiliar abbreviations in context. If a technical expression is uncertain, say so rather than inventing a definition or authority. Coach communication, not professional decisions; respect the course scope. Ask only for fictional or anonymized practice details. Judge clarity, meaning, appropriate tone and the next step. Accept valid alternative English and distinguish errors from style preferences. Do not claim to certify my language level. Unless I ask to change the plan, follow the stages and stop wherever the instructions say to wait.

Practice setting: B2 independent. Use natural professional English with brief explanations. Let me attempt each task without a model first. Offer a hint after difficulty and invite a more precise retry.

REFERENCE

Course: Pharmaceutical English

Professional audience: clinical development, regulatory affairs, pharmacovigilance, quality, CMC, manufacturing, medical affairs, market access, and compliance teams

Scope: Fictional language practice for professional communication. Clinical, safety, regulatory, and patient-care decisions follow qualified supervision and current local procedures.

Lesson 01: Drug Development Strategy, Unmet Need, TPP, and Evidence Logic

Original fictional case: A development slide describes an early laboratory result as evidence that a product will benefit patients. Clinical benefit has not been established.

Language workshop: Match certainty to evidence

Communication goal: Separate observations, assumptions, and conclusions.

Language guidance: Say what the evidence shows, identify what is still unknown, and limit the conclusion to that evidence. Words such as 'may', 'suggests', and 'in this sample' are useful when the uncertainty is real. Do not soften an urgent, verified safety concern.

Useful frames (complete the gaps with case facts): The available evidence shows ... / This may indicate ..., but ... / We have not yet established whether ...

Vocabulary: Indication: Disease, condition, or patient population for which a product is intended or approved. / MOA: Mechanism of action; how the product is understood to produce a biological effect. / TPP: Target product profile describing desired product attributes and evidence needs. / IND: Investigational new drug application allowing clinical investigation in humans in the United States.

Speaking task: Prepare for two minutes. Speak for 45-60 seconds using the case facts, then respond to your partner's question. Switch roles and repeat without reading the model response.

Partner: You need to tell a colleague what is known. Ask which part is confirmed and which part is an assumption. Challenge one statement that sounds more certain than the case supports.

Writing task: Write a 70-110 word message for the person who needs to act on this case. State the purpose, preserve the relevant facts, and make the next action or unresolved question clear. Use a subject line and an appropriate opening. Do not invent a deadline, finding, or approval.

Optional second-round challenge: Someone asks for a yes-or-no answer when the evidence supports only a qualified answer. Be concise while preserving the uncertainty.

Model for comparison AFTER my attempt, not a response to give me first: The result supports further investigation in this laboratory setting. It does not establish patient benefit. I'll revise the wording to distinguish the early finding from the clinical questions still to be tested.

END REFERENCE

TASK: Adapt this material for a teaching session

1. Ask me one brief planning question covering learner support needs, group size and available time. Offer a default of two B2 learners and 20 minutes. Stop and wait; use the default only if I choose it.
2. Create a timed plan using the supplied case or dialogue, its actual terminology and one narrow language goal. Include an individual first attempt, partner exchange, focused feedback and a retry. Keep the total within the time I choose. State what the learner should be able to communicate at the end.
3. Provide separate role cards for two or three professional speakers. Each card needs an objective, known information and one question to resolve. Label any invented private information as a variation; do not contradict shared facts. Do not place the model answer on the learner cards.
4. Add a B1 support option with useful frames, a B2 independent task and a C1 extension involving a plausible competing constraint. Maintain the same professional meaning across levels. Explain unfamiliar terms without removing the field's normal language. Include a workable solo alternative.
5. Put teacher notes and suggested responses in a clearly separate section after the learner material. Include likely misunderstandings and a short observation checklist for facts, clarity, tone and next step. Accept multiple successful formulations. Finish with one exit question and a delayed-recall task; identify what the teacher should check before use.

REFERENCE

Course: Pharmaceutical English

Professional audience: clinical development, regulatory affairs, pharmacovigilance, quality, CMC, manufacturing, medical affairs, market access, and compliance teams

Scope: Fictional language practice for professional communication. Clinical, safety, regulatory, and patient-care decisions follow qualified supervision and current local procedures.

Lesson 01: Drug Development Strategy, Unmet Need, TPP, and Evidence Logic

Original fictional case: A development slide describes an early laboratory result as evidence that a product will benefit patients. Clinical benefit has not been established.

Language workshop: Match certainty to evidence

Communication goal: Separate observations, assumptions, and conclusions.

Language guidance: Say what the evidence shows, identify what is still unknown, and limit the conclusion to that evidence. Words such as 'may', 'suggests', and 'in this sample' are useful when the uncertainty is real. Do not soften an urgent, verified safety concern.

Useful frames (complete the gaps with case facts): The available evidence shows ... / This may indicate ..., but ... / We have not yet established whether ...

Vocabulary: Indication: Disease, condition, or patient population for which a product is intended or approved. / MOA: Mechanism of action; how the product is understood to produce a biological effect. / TPP: Target product profile describing desired product attributes and evidence needs. / IND: Investigational new drug application allowing clinical investigation in humans in the United States.

Speaking task: Prepare for two minutes. Speak for 45-60 seconds using the case facts, then respond to your partner's question. Switch roles and repeat without reading the model response.

Partner: You need to tell a colleague what is known. Ask which part is confirmed and which part is an assumption. Challenge one statement that sounds more certain than the case supports.

Writing task: Write a 70-110 word message for the person who needs to act on this case. State the purpose, preserve the relevant facts, and make the next action or unresolved question clear. Use a subject line and an appropriate opening. Do not invent a deadline, finding, or approval.

Optional second-round challenge: Someone asks for a yes-or-no answer when the evidence supports only a qualified answer. Be concise while preserving the uncertainty.

Model for comparison AFTER my attempt, not a response to give me first: The result supports further investigation in this laboratory setting. It does not establish patient benefit. I'll revise the wording to distinguish the early finding from the clinical questions still to be tested.

END REFERENCE

TASK: Match the language to the listener

1. Choose a short message or utterance from the reference and quote it exactly. Identify its purpose and likely audience. Ask me to choose a new audience: a close colleague, a decision-maker, or an external reader who may not know the jargon. Stop and wait.
2. Ask me to adapt that message for the chosen reader, keeping its facts and degree of certainty unchanged. Offer a short frame only if I request help. Wait for my attempt before showing alternatives.
3. Discuss at most three choices in my version: directness, specialist vocabulary and interpersonal tone. Explain when a direct request is clearer than extra politeness, and when an unfamiliar abbreviation needs expansion. Avoid cultural stereotypes or claims that one nationality always communicates a certain way.
4. Show two natural alternatives, such as a concise spoken version and a more explicit written version. Explain the tradeoff in each. Do not turn a request into an order, a possibility into a promise, or a pending decision into approval.
5. Ask me to respond to one realistic follow-up from the new reader, then wait. Finish by asking me to adapt the message for a second audience without losing its core meaning. Give feedback only after the attempt.

END PROMPT
