

ENGLISH FOR WORK / SEPTEMBER 2026

Biotechnology English

Conversation lab

Use these role cards to practice a response, handle a follow-up, and repeat with a new communication challenge.

PRACTICE THAT TRANSFERS TO WORK

Read a realistic case. Find the right language. Speak, write, get feedback, and try again.

Eight lessons | Intermediate to advanced | Independent or classroom study

For biotech scientists, translational researchers, assay-development teams, platform teams, program managers, alliance managers, business-development staff, and biotech executives.

Fictional language practice for professional communication. Clinical, safety, regulatory, and patient-care decisions follow qualified supervision and current local procedures.

All scenarios, figures, and model responses are fictional teaching material. Use invented details in practice.

[Open this course on English Ladder](#)

How to use the conversation lab

1. Read the shared case. Spend two minutes noting the facts and your first response.
2. Assign roles. The responding professional uses role A; the listener uses role B. Read your own role privately before you begin.
3. Speak for 45-60 seconds. The listener asks a follow-up instead of simply agreeing. Continue until the meaning and next action are clear.
4. Reveal the model response. Identify one useful expression and compare it with your own wording.
5. Switch roles. Use the second-round challenge and speak again with fewer notes.

If you are studying alone

Speak both roles aloud. Leave a pause after the question, then answer without looking at the model. You can also write a four-turn exchange and read it back for clarity.

Useful conversation repair

- Could you say that another way?
- When you say that, which part do you mean?
- Let me check that I understood correctly.
- I need a moment to separate what is confirmed from what is still unknown.

Feedback

Judge whether the listener understands the situation and can identify the next action or unresolved question. Correct one meaning issue and one useful language pattern, then repeat.

CONVERSATION 01

Platform Technology and Scientific Thesis

SHARED CASE

A platform produces a promising signal in one experimental system. An investor slide says it will work across several diseases.

Role A | Responding professional

Separate observations, assumptions, and conclusions. Use only the facts given. Choose two relevant terms and be ready to explain one of them in ordinary words.

Role B | Listener

You need to tell a colleague what is known. Ask which part is confirmed and which part is an assumption. Challenge one statement that sounds more certain than the case supports.

Useful expressions

The available evidence shows

This may indicate ..., but

We have not yet established whether

Cover this until after your first attempt

The finding is promising in this experimental system. We have not established its relevance across diseases. I'll distinguish the current evidence from the broader platform hypothesis.

Second round

Someone asks for a yes-or-no answer when the evidence supports only a qualified answer. Be concise while preserving the uncertainty.

Debrief

Which phrase helped the listener? Which case fact needed clarification? Write one better follow-up question, then repeat the exchange.

CONVERSATION 02

Assay Development and Reproducibility

SHARED CASE

An assay gives consistent results within one run but different results across three days. A colleague calls it fully reproducible.

Role A | Responding professional

Compare options using the same criteria and state the tradeoff. Use only the facts given. Choose two relevant terms and be ready to explain one of them in ordinary words.

Role B | Listener

You favor one option but have not checked whether the scope is comparable. Ask about one difference, then explain the tradeoff you are willing to accept.

Useful expressions

Both options ..., but

Option A ..., whereas option B

The comparison depends on

Cover this until after your first attempt

Within-run consistency and performance across days are different questions. Let's report both and investigate the between-day variation before describing the assay as reproducible under those conditions.

Second round

Your listener focuses only on the lowest price or fastest date. Explain one other relevant comparison criterion.

Debrief

Which phrase helped the listener? Which case fact needed clarification? Write one better follow-up question, then repeat the exchange.

CONVERSATION 03

Biomarkers and Translational Strategy

SHARED CASE

A team calls a biomarker "validated" without specifying whether it means analytical performance or clinical usefulness.

Role A | Responding professional

Clarify missing information before responding. Use only the facts given. Choose two relevant terms and be ready to explain one of them in ordinary words.

Role B | Listener

You need to know exactly what information is missing. Give one answer only after your partner asks a focused question; then ask them to confirm their understanding.

Useful expressions

When you say ..., do you mean ...?

Could you clarify which ...?

So, my understanding is Is that right?

Cover this until after your first attempt

What kind of validation do you mean here? Could we distinguish the assay's analytical performance from evidence about the biomarker's clinical use? The slide needs to state which claim the data support.

Second round

The other person uses an ambiguous word such as 'ready', 'approved', or 'urgent'. Clarify it before continuing.

Debrief

Which phrase helped the listener? Which case fact needed clarification? Write one better follow-up question, then repeat the exchange.

CONVERSATION 04

Preclinical Data Packages

SHARED CASE

An animal study shows an effect at one tested exposure. A summary describes the result as proof of human benefit.

Role A | Responding professional

Separate observations, assumptions, and conclusions. Use only the facts given. Choose two relevant terms and be ready to explain one of them in ordinary words.

Role B | Listener

You need to tell a colleague what is known. Ask which part is confirmed and which part is an assumption. Challenge one statement that sounds more certain than the case supports.

Useful expressions

The available evidence shows

This may indicate ..., but

We have not yet established whether

Cover this until after your first attempt

The result describes the tested animal model and exposure. It does not establish human benefit. I'll state the finding and the limits on translating it to a clinical setting.

Second round

Someone asks for a yes-or-no answer when the evidence supports only a qualified answer. Be concise while preserving the uncertainty.

Debrief

Which phrase helped the listener? Which case fact needed clarification? Write one better follow-up question, then repeat the exchange.

CONVERSATION 05

CMC and Scale-Up in Biotech

SHARED CASE

A process transfer achieved the expected yield in two small runs. Performance at a larger scale remains untested.

Role A | Responding professional

Distinguish completed work from pending work and explain its impact. Use only the facts given. Choose two relevant terms and be ready to explain one of them in ordinary words.

Role B | Listener

You need to brief someone who has only one minute. Ask what is complete, what is open, and which open item affects the next action.

Useful expressions

We have completed ...; ... remains open.

As of ..., the status is

The next update will cover

Cover this until after your first attempt

The two small runs met the expected yield. Larger-scale performance is still untested. I'll present scale-up as an open question and identify the next planned evidence point.

Second round

The listener asks you to reduce the update to two sentences. Preserve the most important completed and pending items.

Debrief

Which phrase helped the listener? Which case fact needed clarification? Write one better follow-up question, then repeat the exchange.

CONVERSATION 06

IP, Freedom to Operate, and Collaboration

SHARED CASE

Two partners want to exchange materials. The draft arrangement leaves publication and permitted-use questions unresolved.

Role A | Responding professional

Make a request with a clear action, purpose, and realistic timing. Use only the facts given. Choose two relevant terms and be ready to explain one of them in ordinary words.

Role B | Listener

You can help but need a clear request and its purpose. Ask what is required and whether the timing is fixed or negotiable.

Useful expressions

Could you provide ... so that ...?

Please confirm ... by [agreed time].

If that timing is not possible, please let me know

Cover this until after your first attempt

Could the responsible teams confirm the permitted uses and publication terms before the exchange? I'll summarize the scientific purpose and the unresolved questions for review.

Second round

The other person cannot meet the requested timing. Clarify an alternative without inventing authority to change a formal deadline.

Debrief

Which phrase helped the listener? Which case fact needed clarification? Write one better follow-up question, then repeat the exchange.

CONVERSATION 07

Investor and Board Updates

SHARED CASE

A project update lists completed experiments but does not connect them to the next funding milestone.

Role A | Responding professional

Explain a useful distinction in plain English. Use only the facts given. Choose two relevant terms and be ready to explain one of them in ordinary words.

Role B | Listener

You are unfamiliar with one technical term in the case. Ask for a plain-English explanation and then paraphrase it. Do not pretend to understand a term you cannot explain.

Useful expressions

In this context, ... means

The difference is that

How would you explain that distinction to a colleague?

Cover this until after your first attempt

I'll group the results around the milestone question: what have we learned, what remains uncertain, and what evidence is needed next? That will make the funding discussion easier to follow.

Second round

Your listener is new to this field. Replace two specialist expressions with clear explanations without changing the meaning.

Debrief

Which phrase helped the listener? Which case fact needed clarification? Write one better follow-up question, then repeat the exchange.

CONVERSATION 08

Partnering and Business Development

SHARED CASE

A potential partner requests exclusive rights before the scope of the collaboration is defined.

Role A | Responding professional

Negotiate scope or timing while making conditions explicit. Use only the facts given. Choose two relevant terms and be ready to explain one of them in ordinary words.

Role B | Listener

You want the preferred outcome but can accept one tradeoff. Ask for two options, then state which condition you can accept and which still needs approval.

Useful expressions

We can ..., provided that

Would you prefer ... or ...?

I can take that proposal for review; I cannot yet confirm

Cover this until after your first attempt

We can discuss exclusivity alongside the proposed scope, responsibilities, and milestones. Could we first clarify which activities and rights you have in mind so the appropriate teams can evaluate the request?

Second round

The preferred option is unavailable. Offer an alternative and clearly state any approval still needed.

Debrief

Which phrase helped the listener? Which case fact needed clarification? Write one better follow-up question, then repeat the exchange.

Give feedback that helps

Score each criterion 0, 1, or 2. This is a practice rubric, not a professional qualification or CEFR test. Do not award or remove points for a particular accent.

Meaning and accuracy

Keeps the case facts accurate; clearly separates confirmed and unknown information.

Clarity and language

Uses understandable sentences and explains specialist terms when the listener needs it.

Interaction and tone

Responds to the other person's question, checks understanding, and uses an appropriate tone.

Task completion

Makes the requested action or unresolved question clear without inventing authority or facts.

Use the same scale for each criterion

0 - Not yet: The reader or listener cannot yet recover the intended meaning or action.

1 - With support: The message works after a prompt, clarification, or revision.

2 - Independently: The message is clear and accurate without a prompt.

Feedback sequence

First, identify a successful phrase. Next, identify one point where meaning or accuracy needs work. Offer one useful language correction, allow a repeat, and compare the two attempts. A total out of eight describes this performance only; do not translate it into a proficiency level.

Final challenge

Choose a case not rehearsed today. The learner gives a one-minute response, answers two follow-up questions, and writes a 70-110 word message. Add the lesson's second-round challenge. Compare the result with an earlier attempt using the four criteria.

Use the language responsibly

Fictional language practice for professional communication. Clinical, safety, regulatory, and patient-care decisions follow qualified supervision and current local procedures.

Meaning before performance

Use specialist terms only when they help the listener. Explain unfamiliar words, preserve uncertainty, and ask when an instruction or responsibility is unclear. The model responses illustrate language; they do not authorize professional actions.

Sources and further reading

The cases, workshops, and explanations are original teaching material. These references provide language frameworks and selected professional context. References were checked in September 2026; consult current local guidance for actual work.

Your next step

Choose one expression you can use in a genuine work situation. Rehearse it with fictional details, then adapt the wording to your role and audience.
